F.A.P. RTE.	SECTION	COUNTY	TOTAL SHEETS	SHEET NO.
332	(16BR-1,BR-2)B-1	LAWRENCE	198	2
		CONTRACT NO. 74164		
	ILLINOIS FED. AID PROJECT			

GENERAL NOTES

THE WORK INCLUDED IN SECTION (16BR-1,BR-2)B-1 CONSISTS OF THE COMPLETE REMOVAL AND REPLACEMENT OF EXISTING STRUCTURE NUMBERS 051-0004 AND 051-0005 WITH NEW STRUCTURES, BRIDGE APPROACH PAVEMENTS, HOT-MIX ASPHALT RESURFACING, RIP RAP, GUARDRAIL, PAVEMENT MARKING, TRAFFIC CONTROL, AND ANY OTHER WORK NECESSARY TO COMPLETE THIS SECTION. THE WORK SHALL BE COMPLETED UTILIZING STAGE CONSTRUCTION WITH TEMPORARY TRAFFIC SIGNALS. STRUCTURE NUMBER 051-0004, CARRIES ILLINOIS ROUTE 1 OVER THE EMBARRAS RIVER OVERFLOW AND IS LOCATED APPROXIMATELY 1 MILE NORTH OF US ROUTE 50 IN LAWRENCE COUNTY. EXISTING STRUCTURE NUMBER 051-0005, CARRIES ILLINOIS ROUTE 1 OVER THE EMBARRAS RIVER OVERFLOW AND IS LOCATED APPROXIMATELY 0.5 MILES NORTH OF US ROUTE 50 IN LAWRENCE COUNTY.

THE MATERIAL USED FOR AGGREGATE SHOULDERS, TYPE B SHALL BE CRUSHED STONE, CRUSHED CONCRETE, OR RAP. THE MATERIAL USED FOR AGGREGATE SURFACE COURSE, TYPE B SHALL BE CRUSHED STONE OR CRUSHED CONCRETE.

FULL DECK SLAB REPAIR QUANTITIES ARE APPROXIMATED. ACTUAL QUANTITIES AND LOCATIONS TO BE DETERMINED IN THE FIELD BY THE ENGINEER. THIS WORK IS INTENDED TO REPAIR ONLY THE AREAS OF SEVERE DETERIORATION. SOME MINOR DETERIORATED AREAS MAY BE LEFT UNREPAIRED.

COMMITMENTS

WETLANDS EXIST WITHIN AND ADJACENT TO THE PROPOSED PROJECT AREA. A PERIMETER EROSION BARRIER SHALL BE INSTALLED ALONG THE CONSTRUCTION LIMITS ACCORDING TO THE PLAN AND PROFILE SHEETS TO PROTECT THE ADJACENT WETLANDS FROM DISTURBANCE AND SEDIMENTATION. NO PERSON, PARKING OF VEHICLES, STORAGE OF EQUIPMENT, OR MATERAIL SHALL BE ALLOWED OUTSIDE OF THE CONSTRUCTION LIMITS AND THE ADJACENT WETLANDS SHALL NOT BE DISTURBED.

TREES TO BE REMOVED AS PART OF THIS CONTRACT ARE TO BE REPLACED, AND THE REPLACEMENT TREES ARE TO BE DELIVERED AND PLANTED AT RED HILLS STATE PARK IN SUMNER, IL. CONTACT INFORMATION REGARDING THIS MATTER IS LISTED BELOW:

RED HILLS STATE PARK
3571 RANGER LANE
SUMNER, IL 62466
CONTACT: TONY HOLTSCHLAG, SITE SUPERINTENDENT
PHONE: (618) 936-2469

Benchmark: Chiseled square on southeast corner of bridge hubguard of structure 051-0004, Station 83+11, 16.1 ft rt, Elevation 431.16

Existing Structure: SN 051-0004, an 11 span structure was built in 1923 as SBI Route 1, Section 16. In 1964 the superstructure was replaced, an approach span was added to the south abutment, and Pier 8 was converted to a new north abutment. The remaining three spans were filled. The existing bridge is 346'-0" back-to-back and 35'-8" out-to-out. The bridge is to be removed and replaced utilizing stage construction.

No salvage.

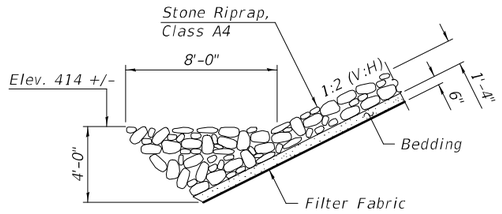
SECTION THRU INTEGRAL ABUTMENT

*Included in the cost of Pipe Underdrains for Structures.

Note:
All drainage system components shall extend to 2'-0" from the end of each wingwall except an outlet pipe shall extend until intersecting with the side slopes. The pipes shall drain into concrete headwalls. (See Article 601.05 of the Standard Specifications and Highway Standard 601101).

**Granular Backfill behind the abutments shall be compacted according to Article 205.06 of the Standard Specifications.



SECTION A-A

GENERAL NOTES

Fasteners shall be ASTM F 3125 Grade A325 Type 1, hot dip galvanized bolts in metallized areas. Bolts 7/8 in. Ø, holes 15/16 in. Ø, unless otherwise noted. See Special Provision for "Metallizing of Structural Steel".

Calculated weight of Structural Steel = 436,870 lbs. (M270 Grade 50).

All new structural steel shall be AASHTO M270 Grade 50.

No field welding is permitted except as specified in the contract documents.

Reinforcement bars designated (E) shall be epoxy coated.

Bearing seat surfaces shall be constructed or adjusted to the designated elevations within a tolerance of 1/8 inch (0.01 ft.). Adjustment shall be made either by grinding the surface or by shimming the bearings.

The existing structural steel coating contains lead. The Contractor shall take appropriate precautions to deal with the presence of lead on this project.

All new structural steel shall be metallized and coated with a clear sealer (System 1). See Special Provisions for "Metallizing of Structural Steel".

Layout of the slope protection system may be varied to suit ground conditions in the field as directed by the Engineer.

The embankment configuration shown shall be the minimum that must be placed and compacted prior to construction of the abutments.

The existing South approach bent shall be removed in its entirety. Cost included with Removal of Existing Structures No. 1.

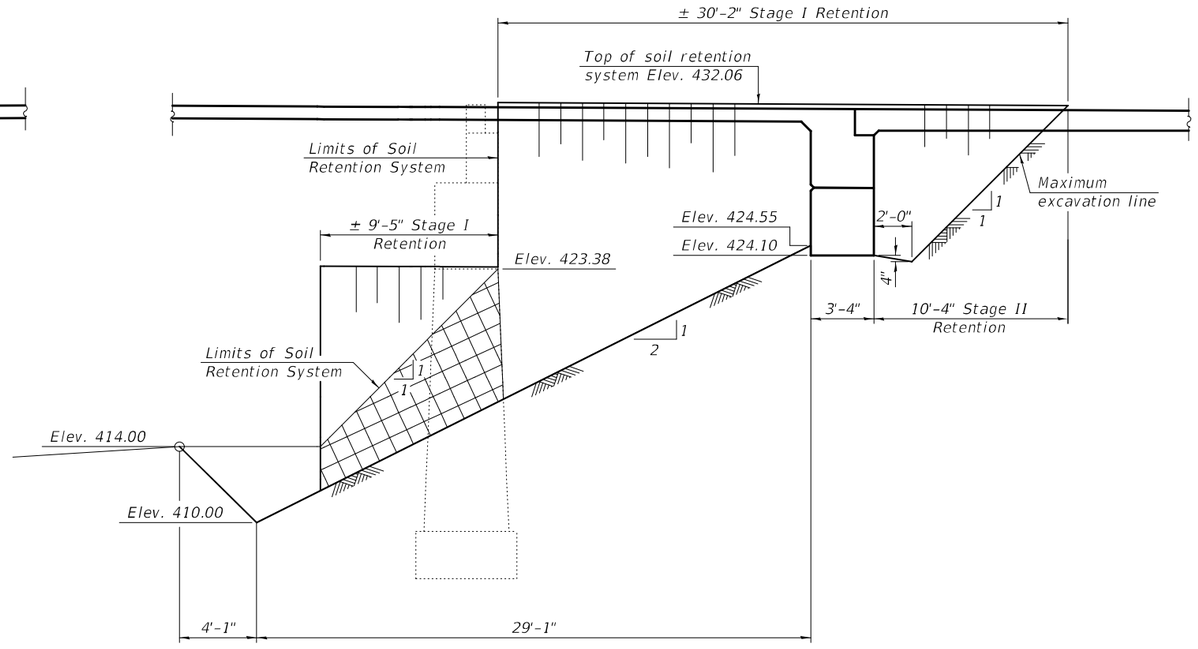
TEMPORARY SHEET PILING
(South Abutment Looking West)



TEMPORARY SOIL RETENTION SYSTEM
(North Abutment Looking West)

During Stage I construction, the cross hatched area of soil under Stage I traffic shall remain as shown, unless another approved means of soil retention for the soil under the existing approach slab is provided.

Notes:

The Contractor shall connect the first sheet to the existing abutment wall to ensure stability of sheets driven to the top of the existing footing. This connection shall be reviewed and accepted by the Engineer and included in the cost for Temporary Sheet Piling.

If the Contractor chooses to alter the temporary cantilevered sheet piling design requirements shown on the plans, a design submittal including plan details and calculations will be required for review and acceptance by the Engineer. (South Abutment).

A cantilevered sheet piling design does not appear feasible and additional members or other retention systems may be necessary. The Contractor shall submit a temporary soil retention system design including plan and details and calculations for review and acceptance by the Engineer. (North Abutment).

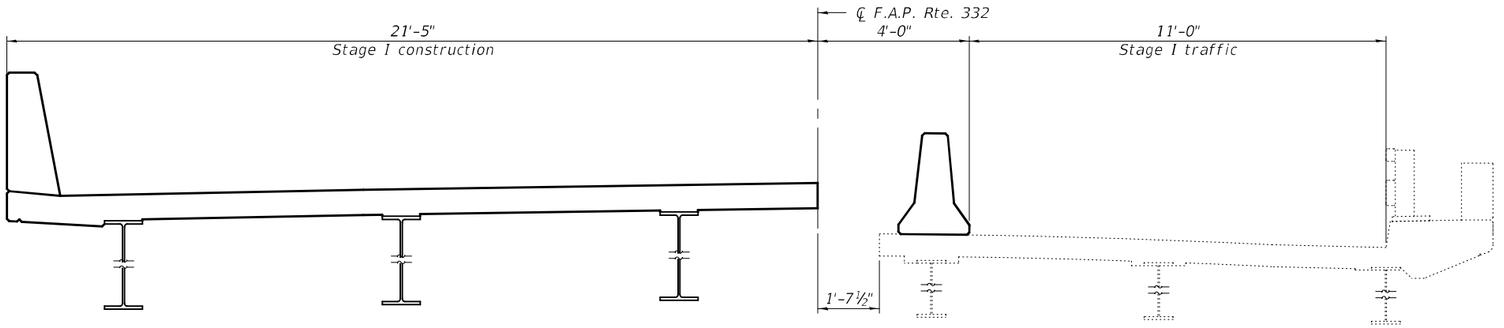
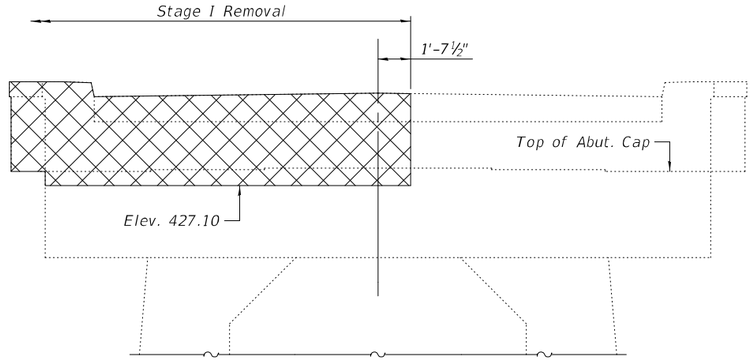
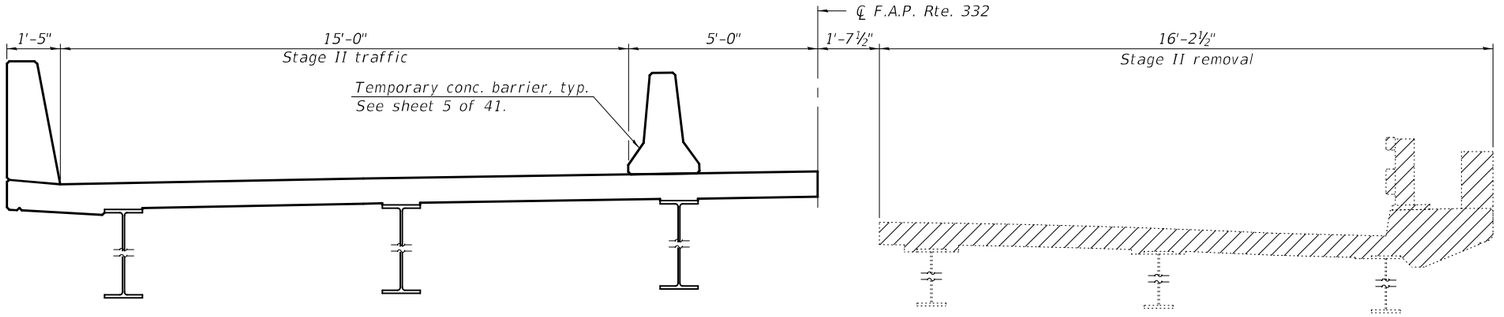
STAGE I REMOVAL



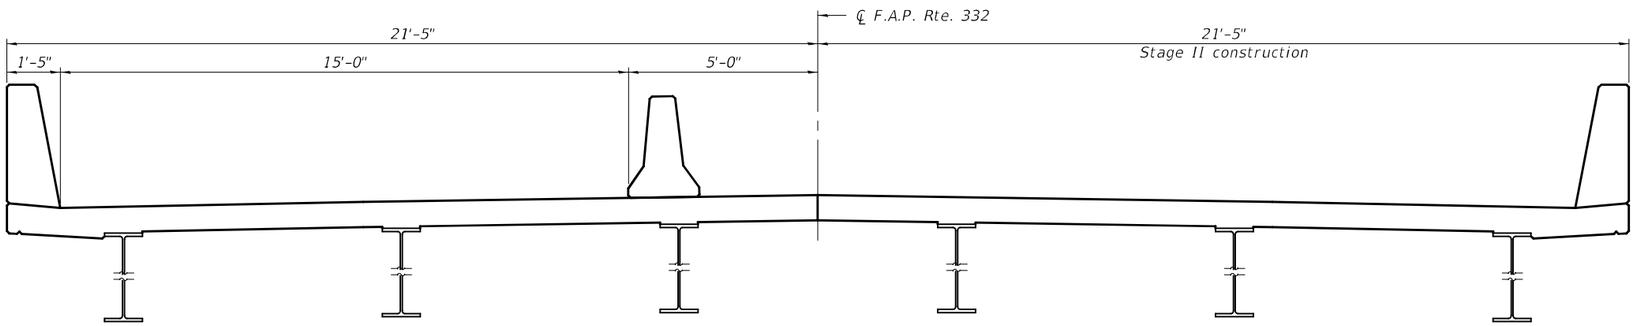
STAGE I CONSTRUCTION



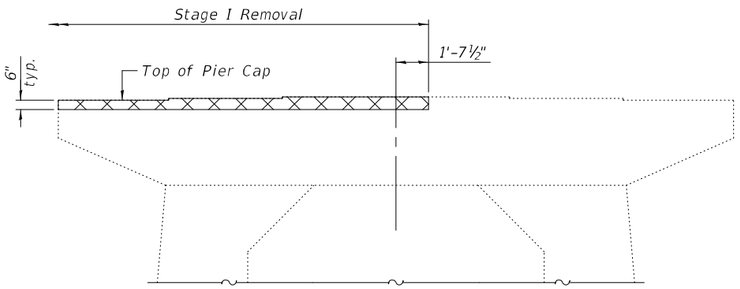
NORTH ABUTMENT CONCRETE REMOVAL
(Looking North)



STAGE II REMOVAL



STAGE II CONSTRUCTION



PIER CAP CONCRETE REMOVAL
(Looking North)

Notes:
Hatched area indicates Removal of Existing Structures No. 1.
For quantities of temporary concrete barrier, see roadway plans.
All staging cross sections are looking north.
Cross-hatched area indicates Stage I concrete removal. Cost included with Removal of Existing Structures No. 1.
Stage I partial removal limits are shown above for the North Abutment and piers. The remaining portions shall be removed to the required final elevations during Stage II Removal.

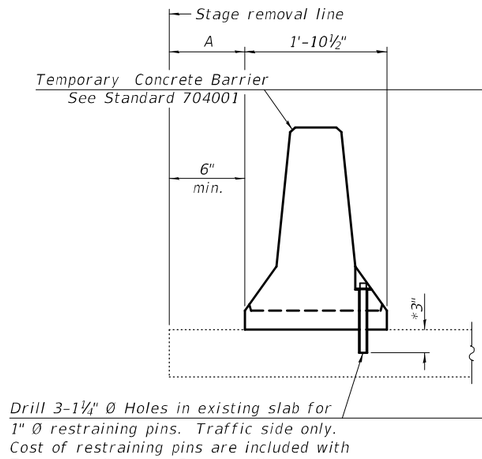
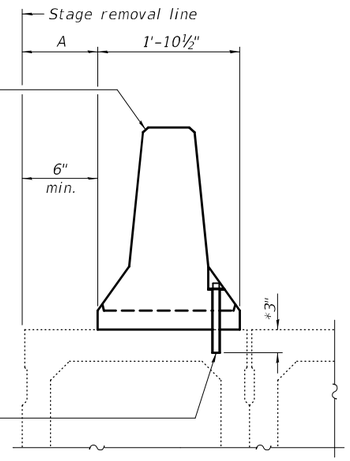
When "A" is 3'-1" or less, the temporary concrete barrier shall be restrained to the new slab according to Detail I, II or III. No restraint is required when "A" is greater than 3'-1".

NEW SLAB OR NEW DECK BEAM



Drill 3-1¼" Ø Holes in existing slab for 1" Ø restraining pins. Traffic side only. Cost of restraining pins are included with Temporary Concrete Barrier. No restraint is required when "A" is greater than 3'-1".

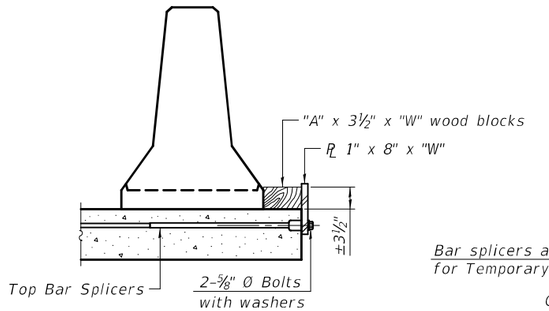
EXISTING SLAB



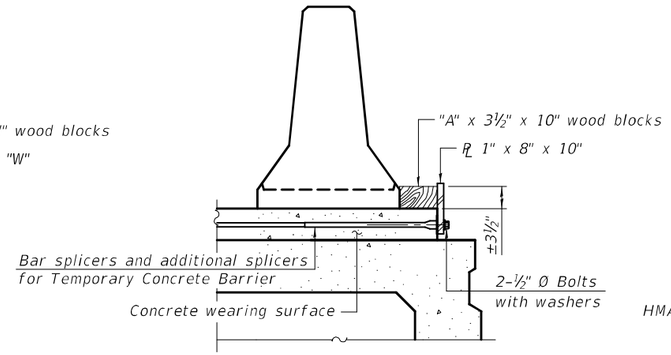
* When hot-mix asphalt wearing surface is present, embedment shall be 3" plus the wearing surface depth.

EXISTING DECK BEAM

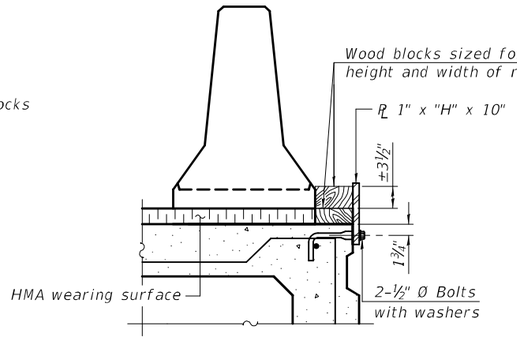
SECTIONS THRU SLAB OR DECK BEAM



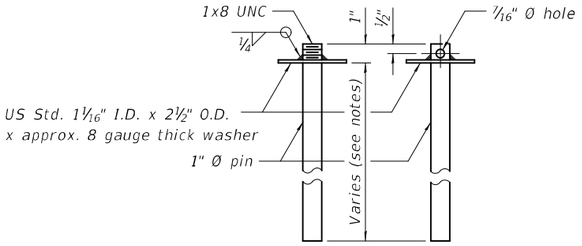
DETAIL I



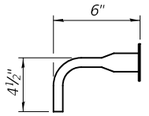
DETAIL II



DETAIL III



RESTRAINING PIN



BAR SPLICER FOR #4 BAR - DETAIL III

Notes:

Cost of retainer assembly is included with Temporary Concrete Barrier.

A retainer assembly shall be located at the approximate ℄ of each temporary concrete barrier.

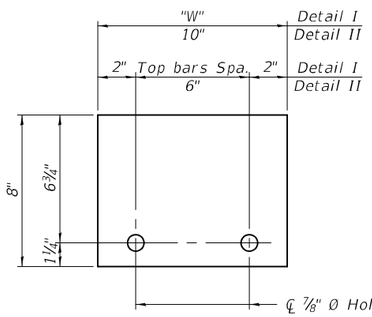
The retainer plate shall not be removed until the concrete on the adjacent stage is ready to be poured. For Detail III applications the retainer plate shall not be removed until just prior to placing the adjacent beam.

When the 'A' dimension is less than 1½", the wood block shall be omitted and the barrier shall be placed in direct contact with the steel retainer plate. For deck beam applications the minimum required 'A' distance is 6" to accommodate the shear key clamping device.

Detail I - Installation for a new bridge deck or bridge slab.

Detail II - Installation for a new deck beam with an initial concrete wearing surface. Additional bar splicers shall be provided at 6'-0" centers and paired with the bar splicers of the concrete wearing surface reinforcement to accommodate the installation of the retainer assemblies. The cost of the additional bar splicers is included with the concrete wearing surface.

Detail III - Installation for a new deck beam with no initial wearing surface or with an initial hot-mix asphalt (HMA) wearing surface present. The deck beam directly beneath the temporary concrete barrier shall be fabricated with bar splicer inserts in the side of the beam, as detailed, to accommodate the installation of the retainer assemblies. A pair of bar splicers, 6" apart, shall be placed at 6'-0" centers along the length of the beam. The cost of the bar splicers is included with the deck beam.



STEEL RETAINER ℄ 1" x 8" x "W"
(Detail I and II)

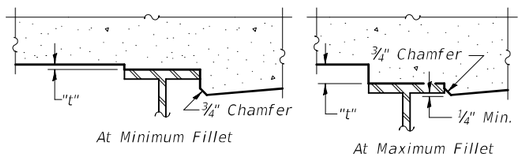
DEAD LOAD DEFLECTION DIAGRAM

(Includes weight of concrete only.)

Note:
The above deflections are not to be used in the field if the engineer is working from the grade elevations adjusted for dead load deflections and grinding as shown on sheets 7 thru 9 of 41.
The slab is to be ground after curing to achieve smoothness but the slab is not to be ground to elevations below the "Theoretical Grade Elevations" shown on sheets 7 thru 9 of 41. For grinding the deck, see Special Provisons.



At Minimum Fillet

At Maximum Fillet

To determine "t": After all structural steel has been erected, elevations of the top flanges of the beams shall be taken at intervals shown on sheets 7 thru 9 of 41. These elevations subtracted from the "Theoretical Grade Elevations Adjusted for Dead Load Deflection and grinding" shown on sheets 7 thru 9 of 41, minus 8¼" slab thickness, equals the fillet heights "t" above top flange of beams.

CROSS SECTION
(Looking North)

AT APPROACH FOOTING

Notes:

The joint opening shall be adjusted for temperature per Article 520.04 of the Standard Specifications. However, since this detail is for jointless structures, the length of bridge used to calculate the adjustment shall be equal to half the total bridge length plus the length of the bridge approach slab.

Parapet concrete shall be paid for as Concrete Superstructure.

Approach slab shall be paid for as Concrete Superstructure (Approach Slab).

Approach footing concrete shall be paid for as Concrete Structures.

The approach footing maximum applied service bearing pressure (Qmax) = 2.0 ksf.

Cost of excavation for approach footing included with Concrete Structures.

For Granular Backfill for Structures and drainage treatment details, see sheet 2 of 41.

For Section B-B, see sheet 18 of 41.

For Detail A, see sheet 18 of 41.

* Cost included with Concrete Superstructure (Approach Slab).
** Per manufacturer recommendations.
*** Prior to grinding.

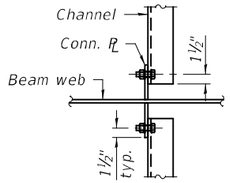
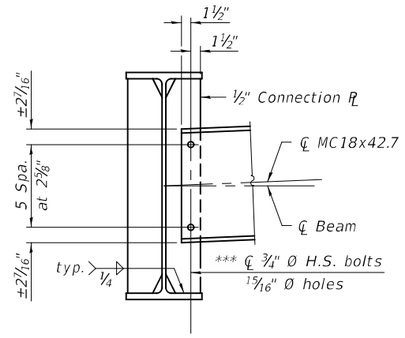
SPLICE DETAIL
(24 Required)



DETAIL A



DIAPHRAGM D
(130 Required)

*** Install only one ⅞" Ø H.S. bolt in center most hole above ℄ of beam at each end of the stage line diaphragm. The bolts shall be finger-tightened prior to deck pour to permit rotation. Install ¾" Ø H.S. bolts and fully tighten immediately after stage II deck pour is complete.

Notes:

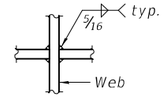
Two hardened washers required for each set of oversized holes.

Alternate channels of equal depth and larger weight are permitted to facilitate material acquisition. Alternate channels, if utilized, shall be provided at no additional cost to the Department.

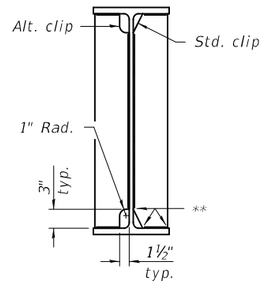
All diaphragms shall be installed as steel is erected and secured with erection pins and bolts except as otherwise noted. Individual diaphragms at supports may be temporarily disconnected to install bearing anchor rods.

Load carrying components designated "CVN" shall conform to the Charpy-V-Notch Impact Energy Requirement, Zone 2.

All splice plates shall be AASHTO M270, Grade 50.



WEB WELD DETAIL



WELD LIMITS AND CLIP DETAILS

** Stop welds ¼" (±⅛") from edges as shown. Typical.

* For fabrication use only.

Is, Ss: Non-composite moment of inertia and section modulus of the steel section used for computing f_s(Total-Strength I, and Service II) due to non-composite dead loads ($in.^4$ and $in.^3$).

Ic(n), Sc(n): Composite moment of inertia and section modulus of the steel and deck based upon the modular ratio, "n", used for computing f_s(Total-Strength I, and Service II) in uncracked sections due to short-term composite live loads ($in.^4$ and $in.^3$).

Ic(3n), Sc(3n): Composite moment of inertia and section modulus of the steel and deck based upon 3 times the modular ratio, "3n", used for computing f_s(Total-Strength I, and Service II) in uncracked sections, due to long-term composite (superimposed) dead loads ($in.^4$ and $in.^3$).

Ic(cr), Sc(cr): Composite moment of inertia and section modulus of the steel and longitudinal deck reinforcement, used for computing f_s (Total-Strength I and Service II) in cracked sections, due to both short-term composite live loads and long-term composite (superimposed) dead loads ($in.^4$ and $in.^3$).

DC1: Un-factored non-composite dead load (kips/ft.).

MDC1: Un-factored moment due to non-composite dead load (kip-ft.).

DC2: Un-factored long-term composite (superimposed excluding future wearing surface) dead load (kips/ft.).

MDC2: Un-factored moment due to long-term composite (superimposed excluding future wearing surface) dead load (kip-ft.).

DW: Un-factored long-term composite (superimposed future wearing surface only) dead load (kips/ft.).

MDW: Un-factored moment due to long-term composite (superimposed future wearing surface only) dead load (kip-ft.).

LLDF: Live Load Distribution Factor for moment and shear computed according to Article 4.6.2.2 and further IDOT provisions.

M_{L+IM}: Un-factored live load moment plus dynamic load allowance (impact) (kip-ft.).

Mu (Strength I): Factored design moment (kip-ft.).
$1.25\ (M_{DC1} + M_{DC2}) + 1.5\ M_{DW} + 1.75\ M_{L+IM}$

Øf Mn: Compact composite positive moment capacity computed according to Article 6.10.7.1 or non-slender negative moment capacity according to Article A6.1.1 or A6.1.2 (kip-ft).

fs DC1: Un-factored stress at edge of flange for controlling steel flange due to vertical non-composite dead loads as calculated below (ksi).
M_{DC1} / S_{nc}

fs DC2: Un-factored stress at edge of flange for controlling steel flange due to vertical composite dead loads as calculated below (ksi).
$M_{DC2} / S_c(3n)$ or $M_{DC2} / S_c(cr)$ as applicable.

fs DW: Un-factored stress at edge of flange for controlling steel flange due to vertical composite future wearing surface loads as calculated below (ksi).
$M_{DW} / S_c(3n)$ or $M_{DW} / S_c(cr)$ as applicable.

fs (L+IM): Un-factored stress at edge of flange for controlling steel flange due to vertical composite live load plus impact loads as calculated below (ksi).
$M_{L+IM} / S_c(n)$ or $M_{L+IM} / S_c(cr)$ as applicable.

fs (Service II): Sum of stresses as computed below (ksi).
$f_s DC1 + f_s DC2 + f_s DW + 1.3\ f_s(L+IM)$

0.95RhFyf: Composite stress capacity for Service II loading according to Article 6.10.4.2 (ksi).

fs (Total)(Strength I): Sum of stresses as computed below on non-compact section (ksi).
$1.25\ (f_s DC1 + f_s DC2) + 1.5\ f_s DW + 1.75\ f_s(L+IM)$

Øf Fn: Non-Compact composite positive or negative stress capacity for Strength I loading according to Article 6.10.7 or 6.10.8 (ksi).

Vf: Maximum factored shear range in span computed according to Article 6.10.10.

OCF: Obtuse Correction Factor applied to non-continuous exterior beam ends and computed according to Article 4.6.2.2.3c or as further simplified by IDOT provisions.

R_{DC1}: Un-factored reaction due to non-composite dead load (kip).

R_{DC2}: Un-factored reaction due to long-term composite (superimposed excluding future wearing surface) dead load (kip).

R_{DW}: Un-factored reaction due to long-term composite (superimposed future wearing surface only) dead load (kip).

R_{L}: Un-factored live load reaction (kip).

R_{IM}: Un-factored dynamic load allowance (impact) (kip)

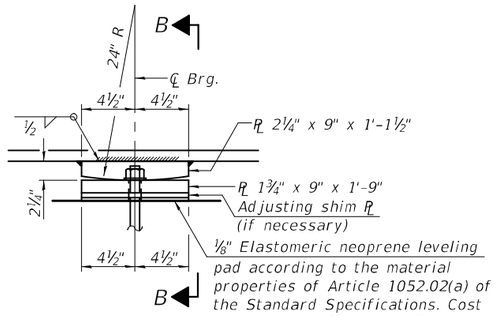
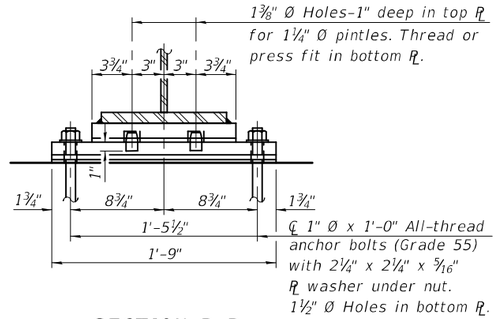
ELEVATION AT ABUTMENTS

SECTION A-A

FIXED BEARING
(12 Required)

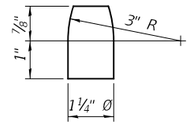


ELEVATION AT PIERS

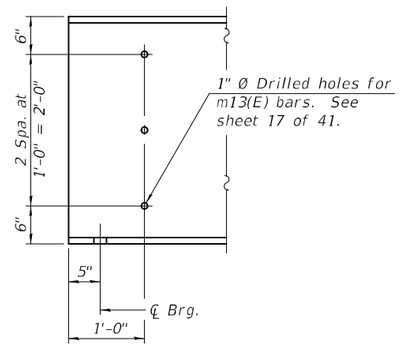


SECTION B-B

FIXED BEARING
(24 Required)



PINTLE



END OF BEAM ELEVATION
(Typical at each end of each beam)

Notes:
All bearing plates and pintles shall be AASHTO M270 Grade 50.
Two ⅛ in. adjusting shims shall be provided for each bearing in addition to all other plates or shims and placed as shown on the bearing details.
Anchor bolts at all supports shall be installed as each member is erected unless an equivalent temporary means of lateral restraint is used.
The anchor bolt sizes and grades shown constitute a calculated seismic structural fuse. Substitution of higher diameter and/or grade anchor bolts will not be allowed.

DETAIL - GFRP REBAR STIFFENING ELEVATION

(Place as shown in parapet section at each parapet joint location.)

Notes:

All dimensions shall remain the same as shown on superstructure details, except dimension "A" which is to be revised as shown.
Additional concrete needed to revise dimension "A" (39" and 44" parapets):
Steel Superstructures: 0.00348 cu. yds./ft.
Slab Bridge Superstructures: cu. yds./ft.
Place full depth aluminum sheets as shown on superstructure details.
Replace all cork joint filler locations with a full thickness saw cut.
Steel and slab superstructures shown. Other superstructure types similar.

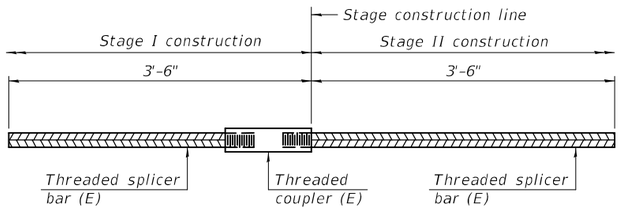
STANDARD BAR SPLICER ASSEMBLY PLAN

Only bar splicer assemblies as presented on the approved QPL list may be used.

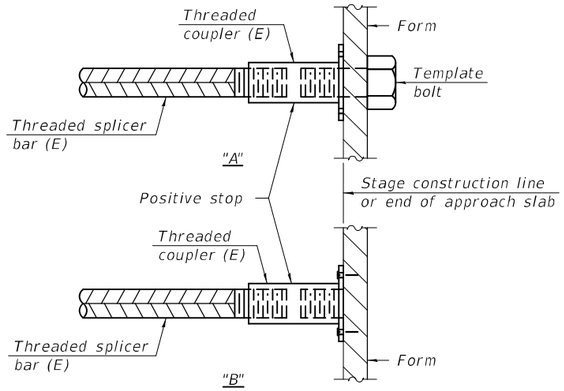
Threaded splicer bar length = min. lap length + 1½" + thread length

** Epoxy not required on Bar Splicer Assembly components used in conjunction with black bars.*

Location	Bar size	No. assemblies required	Minimum lap length
Slab	#5	1330	3'-6"
Approach Slab Top	#5	92	3'-4"
Approach Slab Bottom	#8	120	4'-9"
Approach Slab Footing	#5	80	3'-2"
Abutment Diaphragm, Back Face	#6	8	4'-0"
Abutment Diaphragm, Front Face	#6	6	See Diaphragm Bar Splicer Detail
Abutment Cap	#7	20	5'-6"
Pier Cap	#7	28	5'-0"
Pier Wall	#5	128	3'-7"

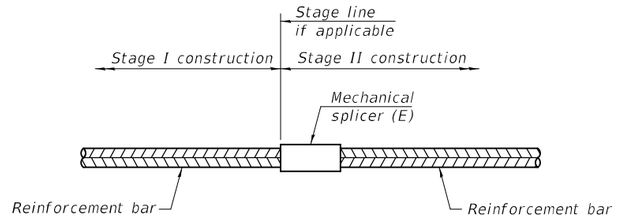


DIAPHRAGM BAR SPLICER DETAIL



INSTALLATION AND SETTING METHODS

"A" : Set bar splicer assembly by means of a template bolt.
"B" : Set bar splicer assembly by nailing to wood forms or cementing to steel forms.
(E) : Indicates epoxy coating.



STANDARD MECHANICAL SPLICER

Location	Bar size	No. assemblies required

Notes:
Splicer bars shall be deformed with threaded ends and have a minimum 60 ksi yield strength.
All reinforcement shall be lapped and tied to the splicer bars.
Bar splicer assemblies shall be epoxy coated according to the requirements for reinforcement bars. See Section 508 of the Standard Specifications.
See approved list of bar splicer assemblies and mechanical splicers for alternatives.

Benchmark: Chiseled square on Souteast corner of bridge hubguard of S.N. 051-0005; 15.4' Rt. Sta. 54+72.6
Elev. 431.29

Existing Structure: Structure No. 051-0005, a 22 span structure was built in 1923 as SBI Route 1, Section 16. The superstructure was replaced in 1964 and the three north end spans were filled in, reducing the number of spans to 19. The bridge is 819'-1½" back-to-back and 35'-8" out-to-out. The superstructure consists of a reinforced concrete deck on wide flange beams, supported by one closed and one open abutment and two-column piers on pile supported footings. The bridge is to be removed and replaced utilizing stage construction.

Salvage: None

DESIGN SPECIFICATIONS

2017 AASHTO LRFD Bridge Design Specifications, 8th Edition

DESIGN STRESSES

FIELD UNITS

f'c = 4,000 psi (Superstructure)
f'c = 3,500 psi (Substructure)
fy = 60,000 psi (Reinforcement)
fy = 50,000 psi (M270 Grade 50)
All structural steel shall be metallized.

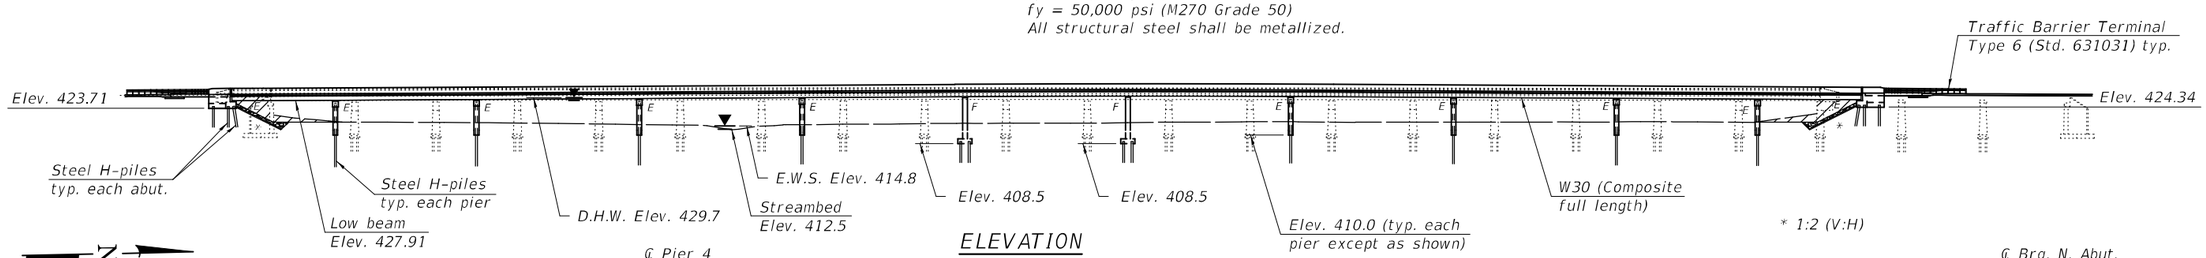
LOADING HL-93

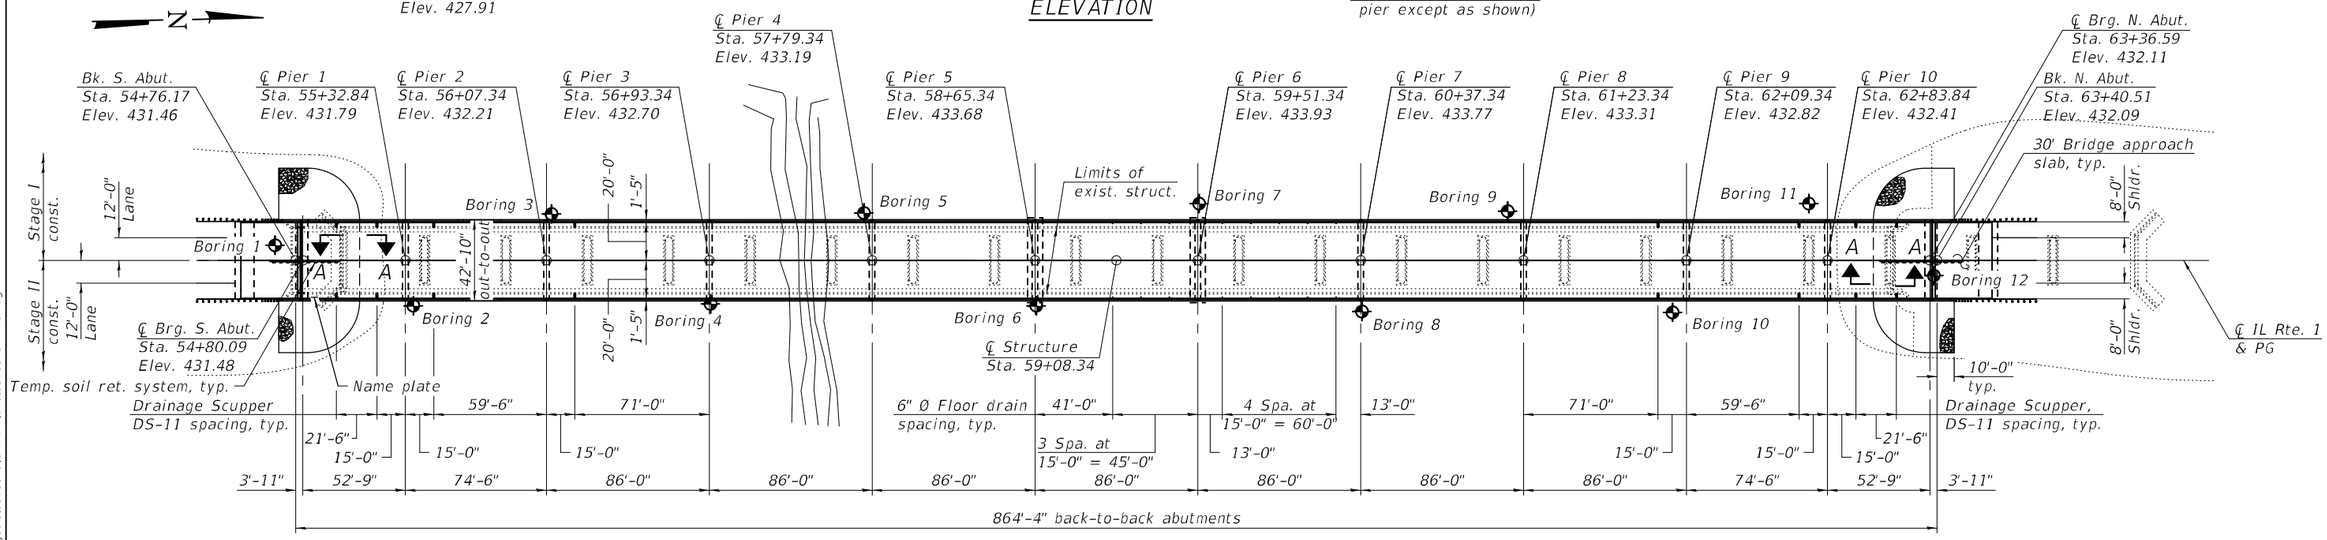
Allow 50#/sq. ft. for future wearing surface.

SEISMIC DATA

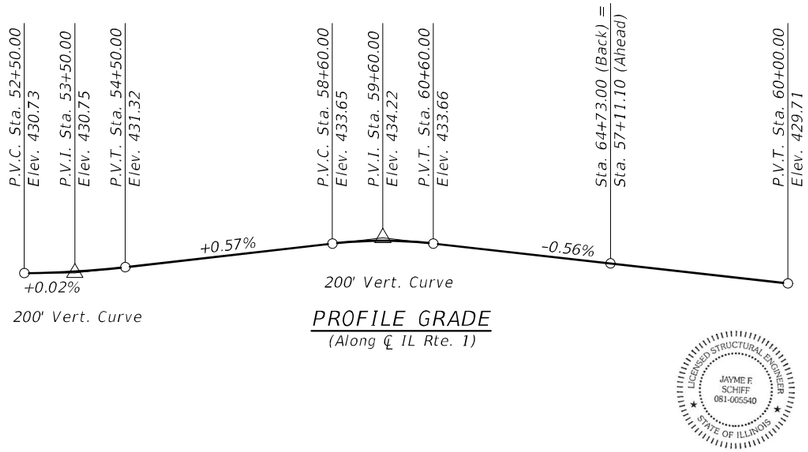
Seismic Performance Zone (SPZ) = 3
Design Spectral Acceleration at 1.0 sec. (SD1) = 0.328 g
Design Spectral Acceleration at 0.2 sec. (SDS) = 0.748 g
Soil Site Class = E

ELEVATION





PLAN



PROFILE GRADE

(Along ℄ IL Rte. 1)

Note:
Up to ¼" may be ground off the bridge deck and the bridge approach slab.
The profile grade shows the final elevations after grinding.
Hatched area indicates channel excavation. See roadway plans for quantity. See sheet 5 of 59 for details.

SECTION THRU PILE SUPPORTED STUB ABUTMENT

*Included in the cost of Pipe Underdrains for Structures.

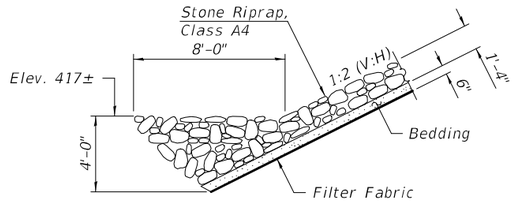
Note:
All drainage system components shall extend parallel to the abutment back wall until they intersect the wingwalls or 2'-0" from the end of the wingwalls when the wings are parallel to the abutment. The pipe shall extend under the wingwall, if necessary, until intersecting the side slopes. The pipes shall drain into concrete headwalls. (See Article 601.05 of the Standard Specifications and Highway Standard 601101).

STATION 59+08.34
BUILT 20 BY
STATE OF ILLINOIS
F.A.P. RTE. 332 – SEC. (16BR-1,BR-2)B-1
LOADING HL-93
STRUCTURE NO. 051 – 0075

NAME PLATE

See Std. 515001

** Granular Backfill for Structures shall follow Std. Spec. 586 except the Coarse Aggregate shall be Grade CA 7, CA 11 or CA 14. Granular backfill behind the abutments shall be compacted according to Article 205.06 of the Standard Specifications.



SECTION A-A

GENERAL NOTES

Fasteners shall be ASTM F 3125 Grade A325 Type 1, hot dip galvanized bolts in metallized areas. Bolts ⅞ in. Ø, holes $1^{5}/_{16}$ in. Ø, unless otherwise noted. See Special Provision for "Metallizing of Structural Steel".

Calculated weight of Structural Steel = 1,042,330 Lbs. (M270, Grade 50)

All new structural steel shall be AASHTO M270 Grade 50.

No field welding is permitted except as specified in the contract documents.

Reinforcement bars designated (E) shall be epoxy coated.

Bearing seat surfaces shall be constructed or adjusted to the designated elevations within a tolerance of ⅛ inch (0.01 ft.). Adjustment shall be made either by grinding the surface or by shimming the bearings.

A film forming Concrete Sealer shall be applied to the designated areas of the front face of backwalls, seat areas, and front faces of pile caps of abutments.

The existing structural steel coating contains lead. The Contractor shall take appropriate precautions to deal with the presence of lead on this project.

All new structural steel shall be metallized and coated with a clear sealer (System 1). See Special Provisions for "Metallizing of Structural Steel".

Layout of the slope protection system may be varied to suit ground conditions in the field as directed by the Engineer.

The embankment configuration shown shall be the minimum that must be placed and compacted prior to construction of the abutments.

The existing south approach bent shall be removed in its entirety. Cost included with Removal of Existing Structures No. 2.

WATERWAY INFORMATION

Drainage Area = 2,329.3 sq. mi.

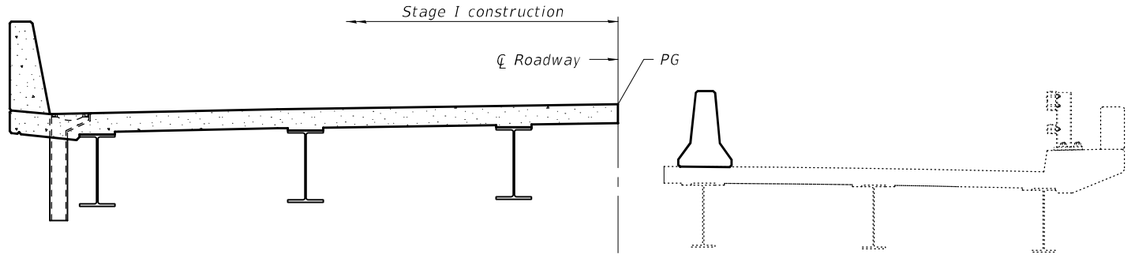
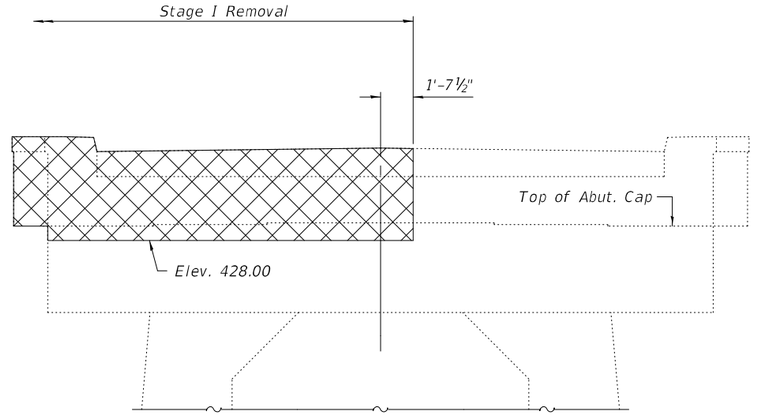
STAGE I REMOVAL

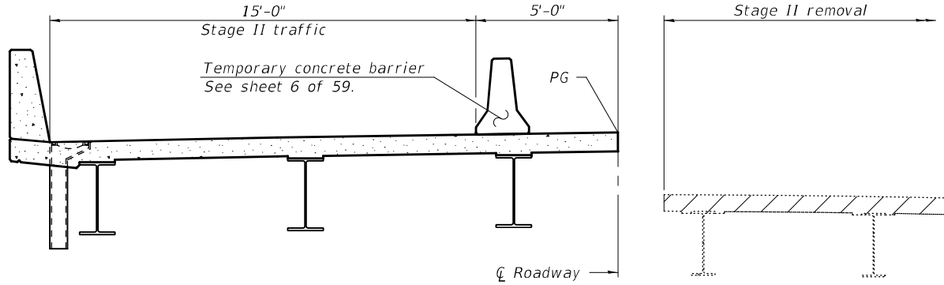


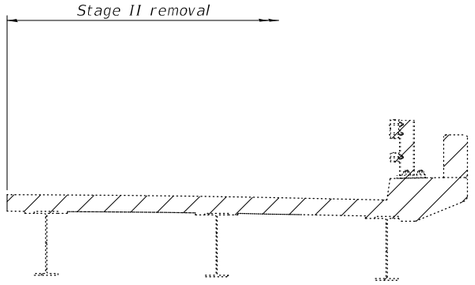
STAGE I CONSTRUCTION



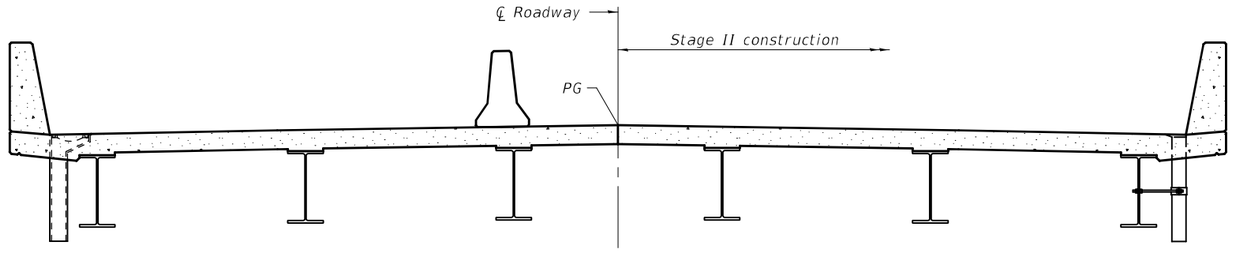
NORTH ABUTMENT CONCRETE REMOVAL

(Looking North)

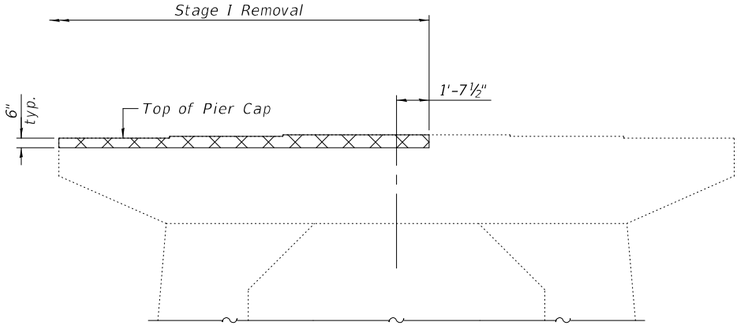




STAGE II REMOVAL



STAGE II CONSTRUCTION



PIERS 1 THRU 3 CONCRETE REMOVAL OF CAP

(Looking North)

Notes:

Hatched area indicates Removal of Existing Structures No. 2.

For quantities of temporary concrete barrier, see roadway plans.

All staging cross sections are looking north.

Crosshatched area indicates Stage I concrete removal. Cost included with Removal of Existing Structures No. 2.

Stage I partial removal limits are shown above for the north abutment and piers. The remaining portions shall be removed to the required final elevations during stage II removal.

TEMPORARY SOIL RETENTION SYSTEM
(South Abutment Looking West)

TEMPORARY SOIL RETENTION SYSTEM
(North Abutment Looking West)

Notes:
A cantilevered sheet piling design does not appear feasible and additional members or other retention systems may be necessary. The Contractor shall submit a temporary soil retention system design including plan and details and calculations for review and acceptance by the Engineer.

During Stage I construction, the cross hatched area of soil under Stage I traffic shall remain as shown, unless another approved means of soil retention for the soil under the existing approach slab is provided.

BAR SPLICER FOR #4 BAR - DETAIL III

RAILING CRITERIA

NCHRP 350 Test Level	3
Railing Weight (plf)	440

R-27

10-12-2021

Notes:

Cost of retainer assembly is included with Temporary Concrete Barrier.

A retainer assembly shall be located at the approximate ℄ of each temporary concrete barrier.

The retainer plate shall not be removed until the concrete on the adjacent stage is ready to be poured. For Detail III applications the retainer plate shall not be removed until just prior to placing the adjacent beam.

When the 'A' dimension is less than 1½", the wood block shall be omitted and the barrier shall be placed in direct contact with the steel retainer plate. For deck beam applications the minimum required 'A' distance is 6" to accommodate the shear key clamping device.

Detail I - Installation for a new bridge deck or bridge slab.

Detail II - Installation for a new deck beam with an initial concrete wearing surface. Additional bar splicers shall be provided at 6'-0" centers and paired with the bar splicers of the concrete wearing surface reinforcement to accommodate the installation of the retainer assemblies. The cost of the additional bar splicers is included with the concrete wearing surface.

Detail III - Installation for a new deck beam with no initial wearing surface or with an initial hot-mix asphalt (HMA) wearing surface present. The deck beam directly beneath the temporary concrete barrier shall be fabricated with bar splicer inserts in the side of the beam, as detailed, to accommodate the installation of the retainer assemblies. A pair of bar splicers, 6" apart, shall be placed at 6'-0" centers along the length of the beam. The cost of the bar splicers is included with the deck beam.

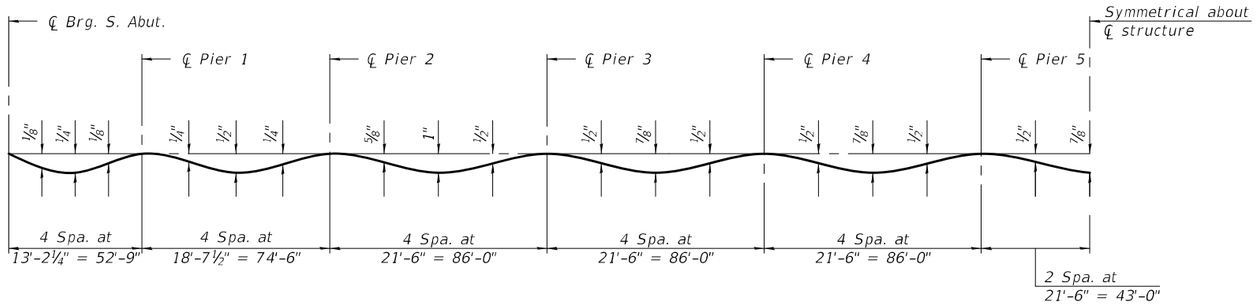
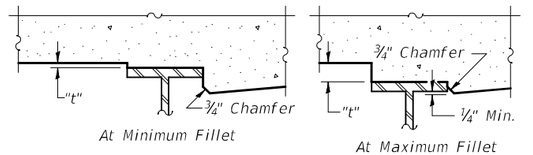
PLAN



DEAD LOAD DEFLECTION DIAGRAM

(Includes weight of concrete only.)

Note:
The above deflections are not to be used in the field if the engineer is working from the grade elevations adjusted for dead load deflections and grinding as shown on sheets 8 thru 12 of 59.



To determine "t": After all structural steel has been erected, elevations of the top flanges of the beams shall be taken at intervals shown above. These elevations subtracted from the "Theoretical Grade Elevations Adjusted for Dead Load Deflection and Grinding" shown on sheets 8 thru 12 of 59, minus the initial slab thickness prior to grinding, equals the fillet heights "t" above top flange of beams.

The slab is to be ground after curing to achieve smoothness, but the slab is not to be ground to elevations below the "Theoretical Grade Elevations" shown on sheets 8 thru 12 of 59. For grinding the deck, see Special Provisions.

PARTIAL PLAN

MINIMUM BAR LAP

#5 bar = 3'-6"

* Actual dimension may vary depending on modular joint manufacturer's design, typ.

** See sheet 42 of 59 for detail of headed bar splicers.

Notes:
See sheet 21 of 59 for superstructure details and Bill of Material.
See sheet 19 of 59 for x(E) bar locations and spacing.
Bars indicated thus 40 x 33-#5 etc. indicates 40 lines of bars with 33 lengths per line.

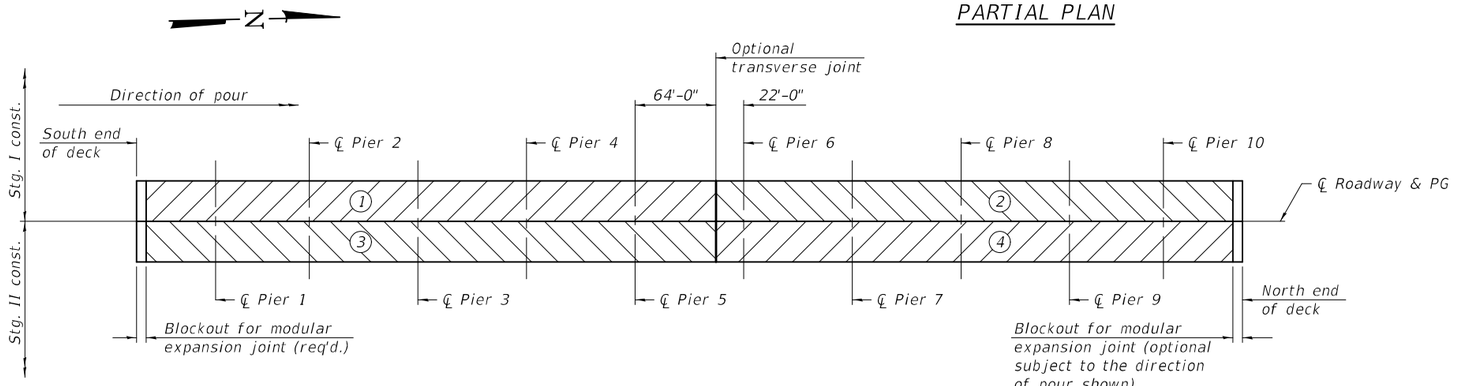
PARTIAL PLAN



DECK POURING SEQUENCE

Notes:

The bridge deck shall be poured in the numeric sequence shown for each stage of construction. If the Contractor wishes to alter the deck pouring sequence from the sequence shown, the Contractor shall submit a proposed deck pouring sequence to the Engineer for review and acceptance.

When the deck pour is stopped for the day at one or more of the transverse bonded construction joints in the deck pouring sequence as shown, the next pour shall not be made until both of the following are met:

1) *At least 72 hours shall have elapsed from the end of the previous pour.*
2) *The concrete strength shall have attained a minimum flexural strength of 675 psi or a minimum compressive strength of 4000 psi.*

Blockout areas for modular expansion joint shall not be poured until the above noted time and strength requirements have been met for the adjoining pour.

Modular joint assemblies shall be installed with forming and reinforcement bars in place prior to pouring the adjoining concrete deck span.

Bearings at abutments shall be shimmed to prevent uplift during deck pour. *See sheet 31 of 59.*

PARAPET JOINT DETAILS

Notes:

Fiberglass pipe shall conform to ASTM D2996, with short-time rupture strength hoop tensile stress of 30,000 p.s.i. minimum.

The exterior surfaces of the floor drains shall be painted according to Article 506 with the finish coat as specified. The exterior surfaces of the drains shall be cleaned according to the Society of Protective Coating's Spec. SSPC-SP1 prior to painting.

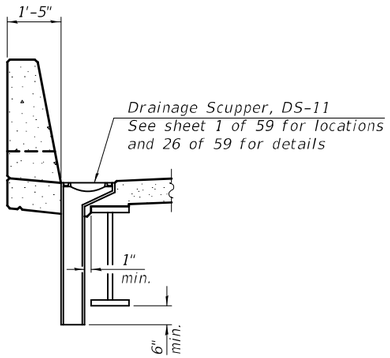
The top portion of aluminum floor drains shall be coated to minimize reaction with wet concrete.

The clamping device shall be galvanized according to AASHTO M 232. Cost of clamping device included with Floor Drains.

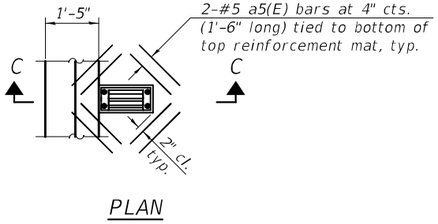
The 3/16" aluminum sheet shall be ASTM B 209 alloy 3003-H14 and coated to minimize reaction with wet concrete. Cost included with Concrete Superstructure.

The polyurethane sealant shall be according to Article 1050.04 of the Std. Spec. and the color shall be gray.

Bar Terminators, paid for separately. See Total Bill of Material.



SECTION C-C



PLAN

Note:

Cut longitudinal reinforcement to clear drainage scuppers.

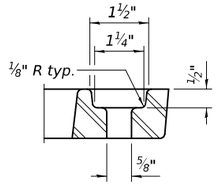
VANE GRATE DETAIL



GRATE BOLT HOLE DETAIL

Notes:

All cast iron parts shall be gray iron conforming to the requirements of AASHTO M105, Class 35B and AASHTO M306.

Bolts, anchor rods, nuts and washers shall be according to ASTM A307 and shall be galvanized according to AASHTO M232. As an alternate stainless steel may be used.

Stainless steel hardware shall be according to Article 1006.29(d) of the Standard Specifications.

Structural steel weldments of equal sections and of the same configuration may be substituted for the cast iron scupper frames and downspouts; however, the scupper grates shall remain cast iron. Fillet or full penetration welds shall be used for the weldments. Details shall be submitted to the Engineer for approval.

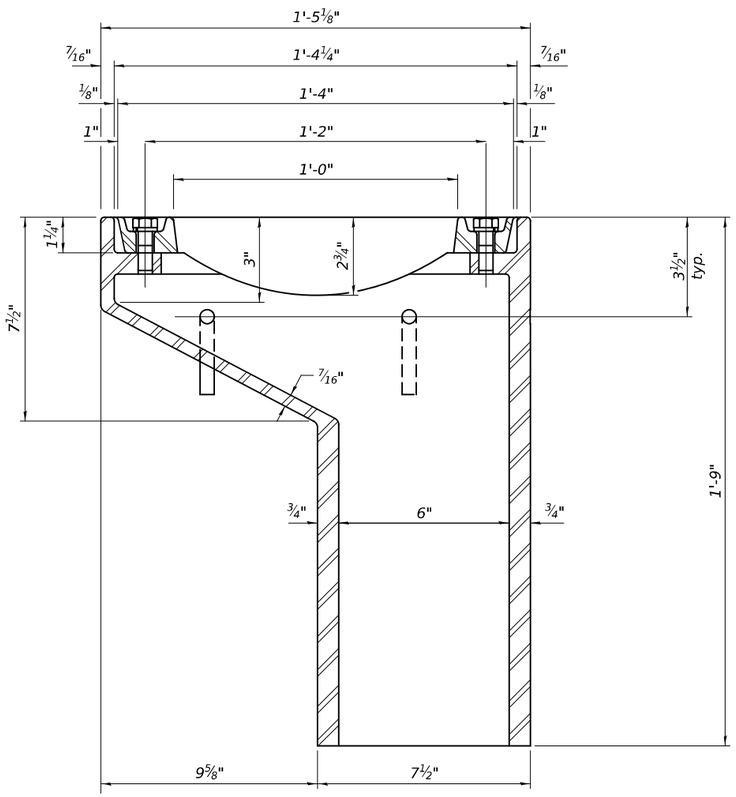
Structural steel scupper frames and downspouts, when utilized, shall be galvanized according to AASHTO M111.

As an alternate, fiberglass may be used for downspouts according to ASTM D2996 with a short-time rupture strength hoop tensile stress of 30,000 psi min. in lieu of the cast iron or structural steel.

Exterior surfaces of downspouts and exterior exposed surfaces of the scupper frame below deck shall be treated as specified on sheet 21 of 59.

The Contractor shall take appropriate measures to assure that Protective Coat is not applied to the scupper.

Cost of the grate, frame, downspout, anchor rods, nuts and washers including complete installation of the scupper shall be paid for at the contract unit price for Drainage Scuppers, DS-11.



SECTION A-A

See sheet 21 of 59 for scupper location relative to parapet.

* For fabrication use only.

I_s, S_s : Non-composite moment of inertia and section modulus of the steel section used for computing f_s(Total-Strength I, and Service II) due to non-composite dead loads ($in.^4$ and $in.^3$).

$I_c(n)$, $S_c(n)$: Composite moment of inertia and section modulus of the steel and deck based upon the modular ratio, "n", used for computing f_s(Total-Strength I, and Service II) in uncracked sections due to short-term composite live loads ($in.^4$ and $in.^3$).

$I_c(3n)$, $S_c(3n)$: Composite moment of inertia and section modulus of the steel and deck based upon 3 times the modular ratio, "3n", used for computing f_s(Total-Strength I, and Service II) in uncracked sections, due to long-term composite (superimposed) dead loads ($in.^4$ and $in.^3$).

$I_c(cr)$, $S_c(cr)$: Composite moment of inertia and section modulus of the steel and longitudinal deck reinforcement, used for computing f_s (Total-Strength I and Service II) in cracked sections, due to both short-term composite live loads and long-term composite (superimposed) dead loads ($in.^4$ and $in.^3$).

DC1: Un-factored non-composite dead load (kips/ft.).

M_{DC1} : Un-factored moment due to non-composite dead load (kip-ft.).

DC2: Un-factored long-term composite (superimposed excluding future wearing surface) dead load (kips/ft.).

M_{DC2} : Un-factored moment due to long-term composite (superimposed excluding future wearing surface) dead load (kip-ft.).

DW: Un-factored long-term composite (superimposed future wearing surface only) dead load (kips/ft.).

M_{DW} : Un-factored moment due to long-term composite (superimposed future wearing surface only) dead load (kip-ft.).

LLDF: Live Load Distribution Factor for moment and shear computed according to Article 4.6.2.2 and further IDOT provisions.

M_{L+IM}: Un-factored live load moment plus dynamic load allowance (impact) (kip-ft.).

M_u (Strength I): Factored design moment (kip-ft.).
$1.25\ (M_{DC1} + M_{DC2}) + 1.5\ M_{DW} + 1.75\ M_{L+IM}$

$\phi_f M_n$: Compact composite positive moment capacity computed according to Article 6.10.7.1 or non-slender negative moment capacity according to Article A6.1.1 or A6.1.2 (kip-ft).

f_s DC1: Un-factored stress at edge of flange for controlling steel flange due to vertical non-composite dead loads as calculated below (ksi).
M_{DC1} / S_{nc}

f_s DC2: Un-factored stress at edge of flange for controlling steel flange due to vertical composite dead loads as calculated below (ksi).
$M_{DC2} / S_c(3n)$ or $M_{DC2} / S_c(cr)$ as applicable.

f_s DW: Un-factored stress at edge of flange for controlling steel flange due to vertical composite future wearing surface loads as calculated below (ksi).
$M_{DW} / S_c(3n)$ or $M_{DW} / S_c(cr)$ as applicable.

f_s (L + IM): Un-factored stress at edge of flange for controlling steel flange due to vertical composite live load plus impact loads as calculated below (ksi).
$M_{L+IM} / S_c(n)$ or $M_{L+IM} / S_c(cr)$ as applicable.

f_s (Service II): Sum of stresses as computed below (ksi).
$f_s DC1 + f_s DC2 + f_s DW + 1.3\ f_s(L + IM)$

$0.95R_hF_{yf}$: Composite stress capacity for Service II loading according to Article 6.10.4.2 (ksi).

f_s (Total)(Strength I): Sum of stresses as computed below on non-compact section (ksi).
$1.25\ (f_s DC1 + f_s DC2) + 1.5\ f_s DW + 1.75\ f_s(L + IM)$

$\phi_f F_n$: Non-Compact composite positive or negative stress capacity for Strength I loading according to Article 6.10.7 or 6.10.8 (ksi).

V_f: Maximum factored shear range in span computed according to Article 6.10.10.

OCF: Obtuse Correction Factor applied to non-continuous exterior beam ends and computed according to Article 4.6.2.2.3c-1 or as further simplified by IDOT provisions.

R_{DC1} : Un-factored reaction due to non-composite dead load (kip).

R_{DC2} : Un-factored reaction due to long-term composite (superimposed excluding future wearing surface) dead load (kip).

R_{DW} : Un-factored reaction due to long-term composite (superimposed future wearing surface only) dead load (kip).

R_L : Un-factored live load reaction (kip).

R_{IM} : Un-factored dynamic load allowance (impact) (kip).

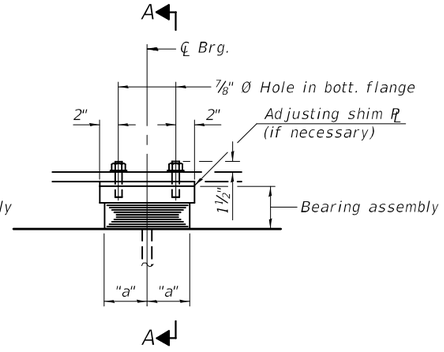
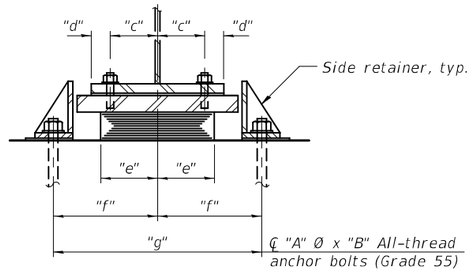
ELEVATION AT ABUTMENTS

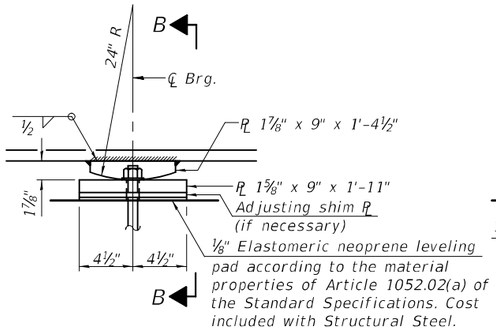


ELEVATION AT PIERS 1 THRU 4 & 7 THRU 10

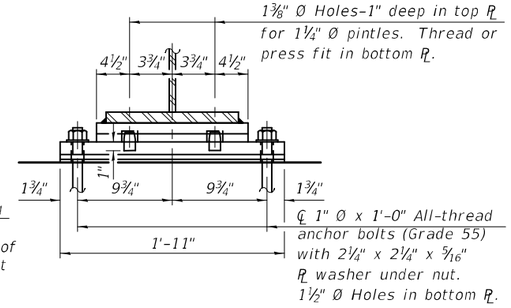


SECTION A-A

TYPE I ELASTOMERIC EXP. BRG.

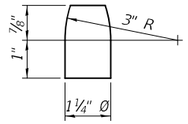


ELEVATION AT PIERS 5 & 6



SECTION B-B

FIXED BEARING



PINTLE

Notes:

Side retainers and stainless steel plates shall be included in the cost of Elastomeric Bearing Assembly, Type I.

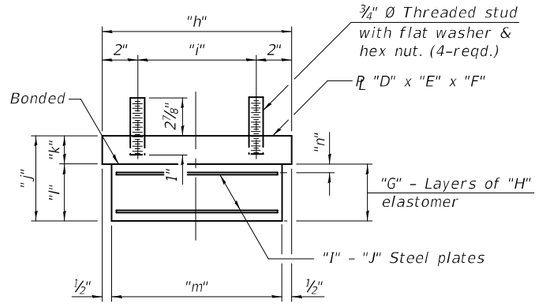
Anchor bolts and side retainers at all supports shall be installed as each member is erected unless an equivalent temporary means of lateral restraint is used.

The structural steel plates of the Bearing Assembly and pintles shall conform to the requirements of AASHTO M 270 Grade 50.

Two ⅛ in. adjusting shims shall be provided for each bearing in addition to all other plates or shims and placed as shown on bearing details.

The anchor bolt sizes and grades shown constitute a calculated seismic structural fuse. Substitution of higher diameter and/or grade anchor bolts will not be allowed.

All bearing plates, side retainers, anchor bolts, nuts, washers and pintles shall be galvanized according to AASHTO M111 or M232 as applicable.



BEARING ASSEMBLY

Note:
Shim plates shall not be placed under bearing assembly.

SIDE RETAINER AT ABUTMENTS

Equivalent rolled angle with stiffeners will be allowed in lieu of welded plates.

During the deck pour, the abutment bearing hold-down tabs shall be shimmed to prevent uplift during the deck pour, and the shims shall be removed after the deck pour is complete.

BILL OF MATERIAL

Item	Unit	Total

Structure Excavation		Cu. Yd.	121.0	
Concrete Structures		Cu. Yd.	49.2	
Reinforcement Bars, Epoxy Coated		Pound	5,950	
Furnishing Steel Piles, HP 14x117		Foot	1,904	
Driving Piles		Foot	1,904	
Test Pile Steel HP 14x117		Each	1	
Concrete Sealer		Sq. Ft.	455	
Pile Shoes		Each	18	

Notes:
Hatched area to be poured after superstructure falsework has been removed.
Quantity of concrete in end post and hatched area included with Concrete Superstructure on sheet 23 of 59.
Space reinforcement in cap to miss anchor bolts.
Pour steps monolithically with cap.
For details of piles, see sheet 41 of 59.
The top of back wall and approach slab seat shall have a constant slope determined from the control points shown.

* Prior to grinding.

** Typical each flange, each pile. Cost included with Furnishing Steel Piles, HP 14x117.

*** Space bars to miss expansion joint support boxes as approved by the Engineer. See modular joint shop drawings.

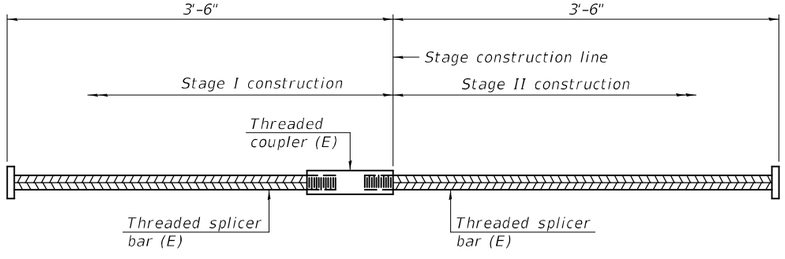
STANDARD BAR SPLICER ASSEMBLY PLAN

Only bar splicer assemblies as presented on the approved QPL list may be used.

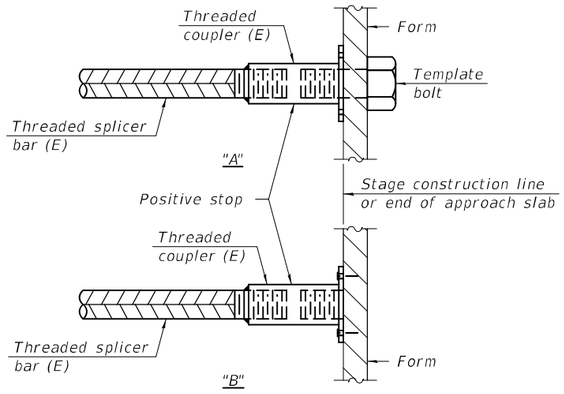
Threaded splicer bar length = min. lap length + 1½" + thread length

* Epoxy not required on Bar Splicer Assembly components used in conjunction with black bars.

Location	Bar size	No. assemblies required	Minimum lap length
Slab	#5	3,020	3'-6"
Edge beam	#5	8	See Headed Bar Splicer Detail
Approach slab, top	#5	90	3'-4"
Approach slab, bottom	#8	120	4'-9"
Approach slab, footing	#5	80	3'-2"
Abutment backwall and hatch block	#5	22	3'-9"
Abutment cap	#7	20	5'-0"
Expansion pier cap	#7	56	5'-0"
Expansion pier wall	#5	276	3'-7"
Fixed pier wall	#5	72	3'-7"
Fixed pier footing	#5	78	3'-7"

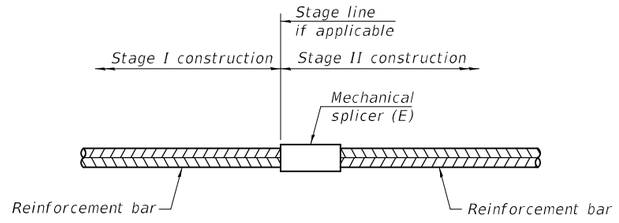


HEADED BAR SPLICER DETAIL



INSTALLATION AND SETTING METHODS

"A" : Set bar splicer assembly by means of a template bolt.
"B" : Set bar splicer assembly by nailing to wood forms or cementing to steel forms.
(E) : Indicates epoxy coating.



STANDARD MECHANICAL SPLICER

Location	Bar size	No. assemblies required

Notes:
Splicer bars shall be deformed with threaded ends and have a minimum 60 ksi yield strength.
All reinforcement shall be lapped and tied to the splicer bars.
Bar splicer assemblies shall be epoxy coated according to the requirements for reinforcement bars. See Section 508 of the Standard Specifications.
See approved list of bar splicer assemblies and mechanical splicers for alternatives.

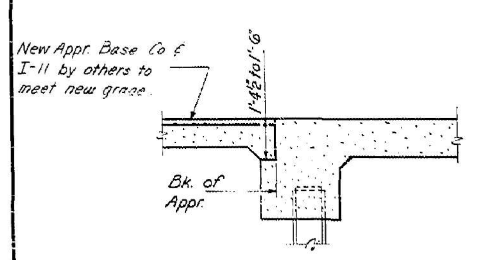
V.C. DIAGRAM



SEC. AT SOUTH APPROACH BENT

GENERAL NOTES

Class X concrete shall be used throughout.

Coarse aggregate to be used in parapet handrails and end post must be absolutely free of chert, flint, limonite, lignite and soft sandstone.

The concrete floor slab shall be finished in accordance with Article 51.19 of the Standard Specifications.

Slope wall shall be reinforced with welded wire fabric 6"×6" mesh weighing 58# per 100 sq. ft.

Layout of slope walls may be varied to suit ground conditions in the field as directed by the Engineer.

All reinforcemet bars shall be lapped 20 diameters unless otherwise shown.

Rivets ¾"ø Open holes 13/16"ø unless otherwise noted.

Anchor bolts shall be set before riveting diaphragms over supports.

The exposed surfaces of the expansion guard shall be given two shop coats of red lead paint, the contact surfaces shall be given one coat of red lead paint. Anchor studs shall not be painted.

Expansion guards are included in the quantity of Structural Steel. Est. Wt. 2530 lbs.

Except as otherwise provided, all structural steel shall receive one shop coat of red lead paint and two field coats of aluminum paint. See Article 56 to 56.5 inclusive of the Standard Specifications.

All Structural Steel shall conform to the Specification for Structural Steel ASTM Designation A36.

The contractor shall verify all dimensions in the field before fabrication of structural steel and handrails.

The contractor shall drive one precast concrete test pile in a permanent location at the South approach slab bent as directed by the Engineer before ordering the remainder of piles.

Concrete piles at the North abutment shall be driven in holes precored through the embankment in accordance with Article 60.9(c) of the Standard Specifications.

NOTES

All Posts shall be placed normal to parapet
All Posts shall be of Aluminum conforming to ASTM Specification B-108 alloy SG-70B-T6.
All Rail Tubing shall be of Aluminum conforming to ASTM Specification B-235 alloy 6061-T6
Aluminum handrail will be paid for at the contract unit price per lineal foot for ALUMINUM HANDRAIL, measured as specified, which price shall be payment in full for all materials, fabrication and erection.
For material composition of Prefabricated Pad, See Art 54.9 (f), (Bearings and Anchorage), of the Std. Specs.
Set Screws shall be of Aluminum conforming to ASTM Specification B-211 alloy 2024-T4
Rail Tubing may extend a maximum of three panel lengths.
Aluminum handrail shall be measured in lineal feet. The length paid for shall be overall length along the top longitudinal railing member through all post gaps.

⅝"Ø Threaded Inserts. Provide 1-Stainless steel washer and 1-⅝"Ø x 2" Stainless Steel Bolt with each Insert

PLAN

GENERAL NOTES

Class X concrete shall be used throughout.

Coarse aggregate to be used in parapet handrails and end posts must be absolutely free of chert, flint, limonite, lignite and soft sandstone.

The concrete floor slab shall be finished in accordance with Article 51.19 of the Standard Specifications.

Slope walls shall be reinforced with welded wire fabric 6"×6" mesh, weighing 58# per 100 sq. ft.

Layout of slope walls may be varied to suit ground conditions in the field as directed by the Engineer.

All reinforcement bars shall be lapped 20 diameters unless otherwise shown.

Rivets ¾" Open holes 13/16" unless otherwise noted.

Anchor bolts shall be set before riveting diaphragms over supports.

The exposed surfaces of the expansion guard shall be given two shop coats of red lead paint, the contact surfaces shall be given one coat of red lead paint. Anchor studs shall not be painted.

Expansion guards are included in the quantity of Structural Steel. Est. Wt. 4630 lbs.

Except as otherwise provided all structural steel shall receive one shop coat of red lead paint and two field coats of aluminum paint. See Article 56.1 to 56.5 inclusive of the Standard Specifications.

All structural steel shall conform to the Specifications for Structural Steel A.S.T.M. Designation A36.

The contractor shall verify all dimensions in the field before fabrication of the structural steel and handrails.

The contractor shall drive one precast concrete test pile in a permanent location of the South approach slab bent as directed by the Engineer before ordering the remaining piles.

Concrete piles at the North abutment shall be driven in holes precored through the embankment in accordance with Article 60.9(c) of the Standard Specifications.

BAR d2

METHOD OF DETERMINING FILLET HEIGHT "x"

After all Structural Steel has been erected elevations of the top flanges of the beams shall be taken at intervals shown on SHEET No.7. From these elevations subtract the increment of deflections for these points, determined from the D.L. Deflection Diagram. The elevations so attained subtracted from the theoretical grade elevations, minus floor thickness, equals the fillet heights above top of beam.

NOTES

All Posts shall be placed normal to parapet

All Posts shall be of Aluminum conforming to ASTM Specification B-108 alloy SG-70B-T6.

All Rail Tubing shall be of Aluminum conforming to ASTM Specification B-235 alloy 6061-T6.

Aluminum handrail shall be measured in lineal feet. The length paid for shall be the overall length along the top longitudinal railing members throughout all post and gaps.

For material composition of Prefabricated Pad, See Art. 54.9 (f), (Bearings and Anchorage), of the Std. Specs.

Set Screws shall be of Aluminum conforming to ASTM Specification B-211 alloy 2024 - T4.

Rail Tubing may extend a maximum of three panel lengths.

Aluminum handrail will be paid for at the contract unit price per lineal foot for ALUMINUM HANDRAIL, measured as specified; which price shall be payment in full for all materials, fabrication, transportation and erection.

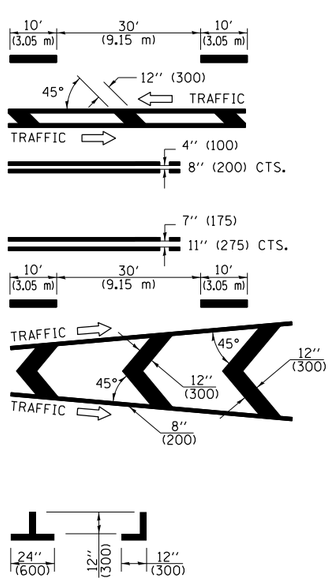
13. 4" (100) PARKING WHITE



GENERAL NOTES

1. TURN ARROW PAIRS SHALL BE PLACED AT 250'(75 m) INTERVALS AND SHALL BE EVENLY SPACED BETWEEN BOTH ENDS OF THE BIDIRECTIONAL LEFT TURN LANE. USE A MINIMUM OF TWO PAIRS PER BLOCK.
2. THE SOLID YELLOW PAVEMENT MARKINGS [2] SHOULD GENERALLY START OR END NEAR THE RADIUS POINT OF EACH STREET RETURN EXCEPT WHERE ONE OR BOTH ENDS WOULD INCLUDE STOP BARS.
3. THE SKIP-DASH PAVEMENT MARKINGS [1] OR [7] SHOULD BE CENTERED BETWEEN BOTH ENDS OF EACH CITY BLOCK AND SHALL BE PLACED SO THEY LINE UP ACROSS FROM EACH OTHER.
4. USE LARGE ARROW SIZE FOR BOTH RURAL AND URBAN LOCATIONS. (SEE SECTION 780 FOR SYMBOLS TABLE)
5. LANE LINE EXTENSIONS SHALL BE THE SAME COLOR AND WIDTH AS THE LANE LINE BEING EXTENDED.
6. ALL WHITE SKIP-DASH LINES SHALL BE 6" IN WIDTH.

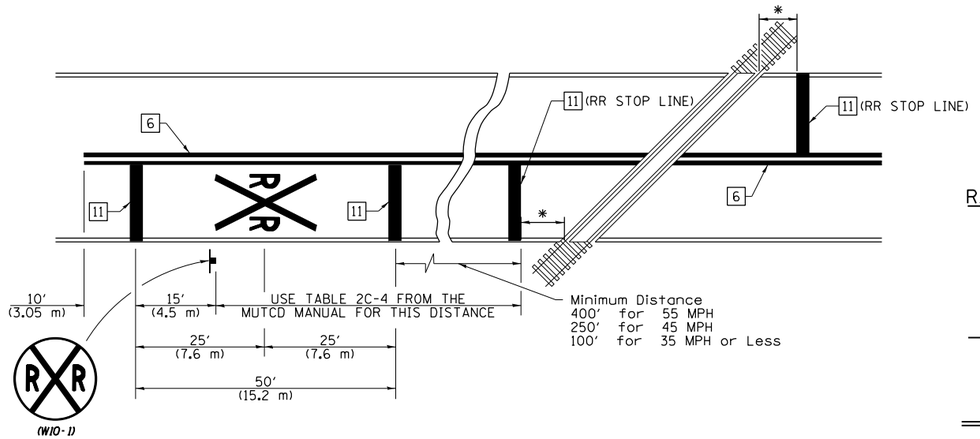
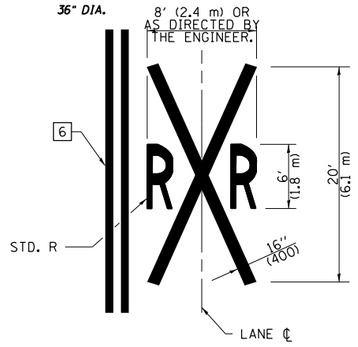
SUPPLEMENTAL PAVEMENT MARKING TREATMENT FOR RAILROAD-HIGHWAY GRADE CROSSING

PAVEMENT MARKINGS AT RAILROAD-HIGHWAY GRADE CROSSING





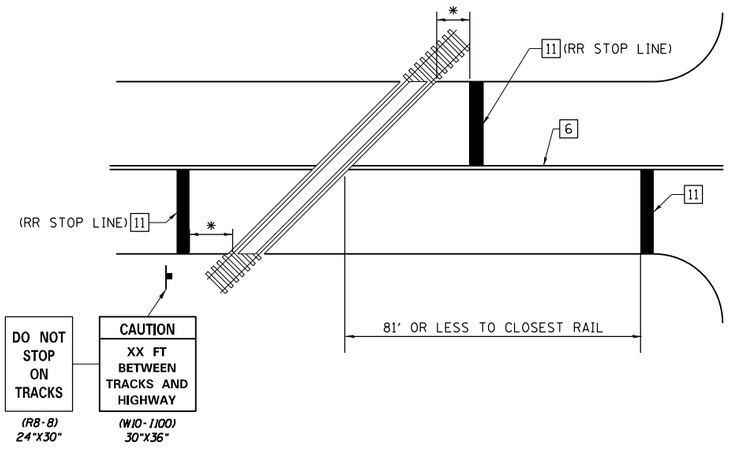
NOTES

THE TRAVERSE SPREAD OF THE "X" MAY VARY ACCORDING TO LANE WIDTH.

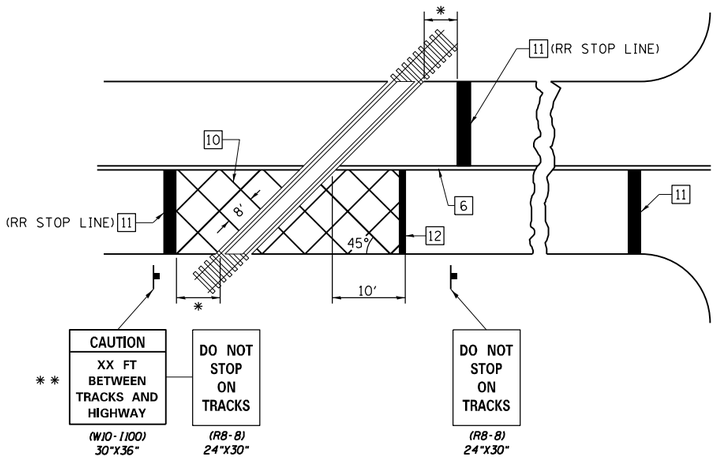
ON MULTI-LANE ROADS, THE STOP LINES SHALL EXTEND ACROSS ALL APPROACH LANES AND SEPARATE RXR SYMBOLS SHALL BE PLACED ADJACENT TO EACH OTHER IN EACH LANE.

WHEN THE PAVEMENT MARKING SYMBOL IS USED, A PORTION OF THE SYMBOL SHOULD BE LOCATED DIRECTLY ADJACENT TO THE ADVANCE WARNING SIGN (W10-1) AS PLACED BY TABLE II-1, CONDITION B OF THE MUTCD.

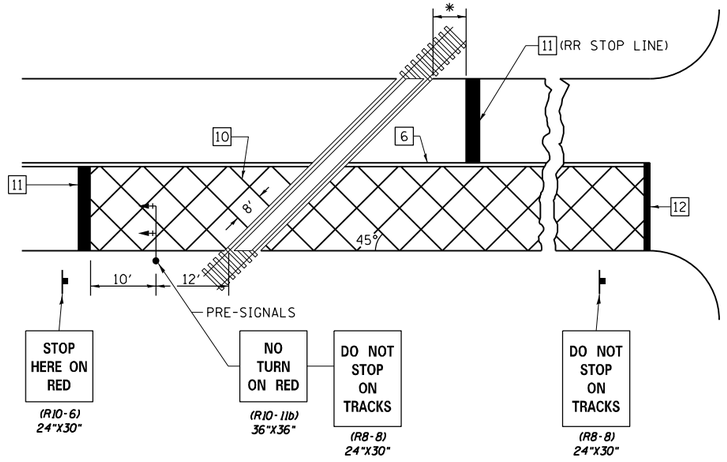
RAILROAD CROSSING WITH NON-SIGNALIZED INTERSECTION



RAILROAD CROSSING WITH INTERCONNECT ONLY

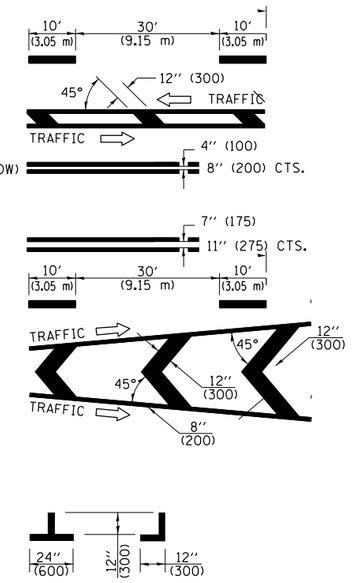


RAILROAD CROSSING WITH INTERCONNECT AND PRE-SIGNALS



PAVEMENT MARKING LEGEND

1. 4" (100) SKIP-DASH (YELLOW)
2. 4" (100) SOLID (YELLOW)
3. 12" (300) DIAGONAL (YELLOW)
4. 4" (100) DOUBLE YELLOW (NARROW)
5. 12" (300) SOLID WHITE
6. 4" (100) DOUBLE YELLOW (WIDE)
7. 6" (150) SKIP-DASH (WHITE)
8. 4" (100) SOLID (WHITE)
9. 12" (300) DIAGONAL (WHITE)
10. 6" (150) SOLID (WHITE)
11. 24" (600) STOP BAR (WHITE)
12. 8" (200) SOLID (WHITE)
13. 4" (100) PARKING WHITE



GENERAL NOTES

1. SUPPLEMENTAL PAVEMENT MARKINGS TO BE INSTALLED ONLY ON APPROACHES TO INTERSECTIONS CONTROLLED BY TRAFFIC SIGNALS WHICH ARE INTERCONNECTED WITH THE RAILROAD WARNING SIGNALS.
2. EXTEND PAVEMENT MARKINGS TO THE INTERSECTION ONLY WHERE PRE-SIGNALS ARE USED.
3. WHEN PEDESTRIAN SIGNALS ARE PRESENT WITH INTERCONNECTED SIGNALS, WARNING SIGN W10-1101 (18"X24") SHALL BE PLACED NEAR EACH PEDESTRIAN SIGNAL HEAD. COUNTDOWN PEDESTRIAN SIGNAL HEADS SHALL NOT BE UTILIZED ALONG WITH INTERCONNECTED SIGNALS.

CAUTION
WALK TIME SHORTENED WHEN TRAIN APPROACHES
(W10-1101) 18"X24"

4. PLEASE REFER TO THE IDOT BUREAU OF OPERATION MEMO OPS T-06 DATED DECEMBER 1, 2020 FOR ADDITIONAL INFORMATION

* 15' FROM NEAR RAIL OR 8' FROM AND PARALLEL TO GATE IF PRESENT

** WARNING SIGN W10-1100 SHALL BE USED AS AN INTERIM MEASURE AT INTERCONNECTED SIGNAL LOCATIONS WHERE PRE-SIGNALS ARE TO BE INSTALLED IN THE FUTURE. THIS SIGN SHALL BE REMOVED WHEN THE PRE-SIGNALS ARE INSTALLED AND THE PAVEMENT MARKINGS ARE EXTENDED TO THE INTERSECTION.

NOT TO SCALE

Note: All dimensions are in INCHES (millimeters) unless otherwise shown.
