## GENERAL NOTES

No field welding is permitted except as specified in the contract documents. Reinforcement bars designated (E) shall be epoxy coated.

Prior to pouring the new concrete deck, all heavy or loose rust, loose mill scale, and other loose or potentially detrimental foreign material shall be removed from the surfaces in contact with concrete. Tightly adhered point may remain unless otherwise noted. Removal shall be accomplished by methods that will not damage the steel and the cost will be included in the pay Item covering removal of the existing concrete.

Plan dimensions and details relative to existing plans are subject to nominal construction variations. The Contractor shall field verify existing dimensions and details affecting new construction and make necessary approved adjustments prior to construction or ordering of materials. Such variations shall not be cause for additional compensation for a change in scope of the work, however, the Contractor will be paid for the quantity actually furnished at the unit price bid for the work.

The existing structural steel coating contains lead. The Contractor shall take appropriate precautions to deal with the presence of lead on this project. Joint openings shall be adjusted according to Article 520.04 of the Std. Specs. when the deck is poured at an ambient temperature other than 50° F.

The Inorganic Zinc Rich Primer / Acrylic / Acrylic Paint System shall be used for shop and field painting of new structural steel except where otherwise noted. The calor of the final finish coat for all interior steel surfaces shall be gray. Munsell No. 5B 7/1. The color of the final finish coat for the exterior and bottom flange of the fascia beams shall be Interstate Green, Munsell No. 7,5G 4/8.

Fasteners shall be high strength bolts. Bolts  $^{3}_{4}$ "  $^{4}$ , open holes  $^{13}_{16}$ "  $^{6}$ , unless otherwise noted. Bolts  $^{7}_{8}$ "  $^{6}$ , open holes  $^{15}_{16}$ "  $^{6}$ , unless otherwise noted. All structural steel shall conform to AASHTO Classification M-270 Gr. 36, unless otherwise noted.

Existing structural steel that will be in contact with new structural steel shall be cleaned and painted prior to erection as required by the Special Provision "Cleaning and Painting Contact Surface Areas of Existing Steel Structures".

After the new beam is in its final position and/or beam straightening operations have been completed, the Engineer in the field shall check to see that the top flange is tight against the slab. If not, the Contractor shall inject epoxy between the existing concrete deck and the top flange of the beam. See Special Provision "Epoxy Injection",

Grind existing nicks, gauges and shallow cracks in the damaged beams as detailed. Grinding shall be done parallel to the longitudinal axis of the member. Ground surfaces shall be inspected for cracks using dye penetrant or magnetic particle testing prior to initiating any beam straightening operations. Any cracks that cannot be removed by grinding approximately  $^i_{A'}$  deep shall be identified and reported to the Bureau of Bridges and Structures for further disposition. Ground surfaces shall be spot cleaned and painted with an aluminum epoxy mastic primer followed by a finish coal to match the color of the existing beam. Cost of grinding, testing and spot painting included with Beam Straightening.

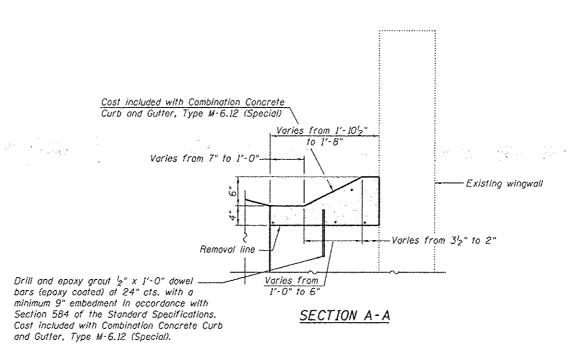

Cost of removal and re-installation of all members necessary to complete the work as detailed on the plans and as specified in the Special Provisions shall be included with Structural Steel Repair,

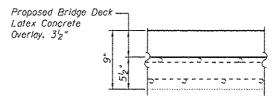

Existing reinforcement bars extending into the removal area shall be cleaned, straightened and incorporated into the new construction. Any reinforcement bars that are damaged during concrete removal shall be replaced with an approved bar splicer or anchorage system. Cost included with Concrete Removal.

Diaphragm connection holes shall be  $^{15}_{16}$ "  $\phi$  for  $^{3}_{4}$ "  $\phi$  bolts. Two hardened washers shall be required at diaphragm connections.

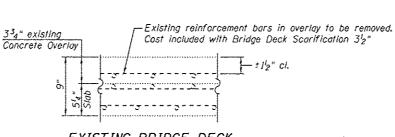

## SCOPE OF WORK

- Remove and replace concrete deck and parapets adjacent to expansion joints in order to install preformed joint strip seal expansion joints.
- Remove 3'2" of existing concrete overlay on bridge using Bridge Deck Scarification.
- 3. Repair deck slab.
- Place 3<sup>1</sup><sub>2</sub>" latex concrete overlay on bridge deck and perform bridge deck grooving. Apply protective coat to new concrete at abutment joints, front and top face of parapets of new concrete.
- 5. Remove and replace wearing surface on all approaches.
- Jack and remove existing bearings at abutments and replace with elastomeric bearings.
- 7. Repair deteriorated concrete on substructure.
- 8. Remove and replace damaged portions of concrete slope walls,
- 9. Clean and reseal pavement relief joints at all approaches.
- 10. Remove or replace deck drains, as indicated.
- Repair corroded steel on fascia beams, repair/replace steel with collision damage as indicated, and replace specified steel end diaphragms.
