

**Heavy Hex Nuts conforming to ASTM A 563, Grade C, D or DH may be used.

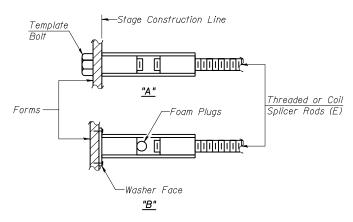

FOR INTEGRAL OR SEMI-INTEGRAL ABUTMENTS

	Bar Splicer for #5 bar				
Min. Capacity = 23.0 kips - tension					
	Min. Pull-out Strength = 12.3 kips - tension				
	No. Required = 62				

INSTALLATION AND SETTING METHODS

"B" : Set bar splicer assembly by nailing to wood forms or cementing to steel forms.

"A": Set bar splicer assembly by means of a template bolt.

(E): Indicates epoxy coating.

RAR SPLICER ASSEMBLIES

bar splicer assembly satisfies the following requirements:

reinforcement bars.

(Tension iii kips)

Minimum *Pull-out Strength = 0.66 x fy x A_t (Tension in kips)

125 percent of the yield strength of the lapped reinforcement bars.

Where fy = Yield strength of lapped reinforcement bars in ksi.

 A_t = Tensile stress area of lapped reinforcement bars. * = 28 day concrete

<u>NOTES</u> Bar splicer assemblies shall be of an approved type and shall develop in tension at least

Splicer rods shall be of minimum 60 ksi yield strength, threaded or coiled full length. All reinforcement bars shall be lapped and tied to the splicer rods or dowel bars.

Other systems of similar design may be submitted to the Engineer for approval. Approval

shall be based on certified test results from an approved testing laboratory that the proposed

Bar splicer assemblies shall be epoxy coated according to the requirements for

	BAN SFLICEN ASSEMBLIES
