June 1, 2016

SUBJECT: FAI Route 57 (I-57)

Section D9 ITS Signing 2013-1 Williamson and Jefferson Counties

Contract No. 78337

Item No. 143, June 10, 2016 Letting

Addendum A

NOTICE TO PROSPECTIVE BIDDERS:

Attached is an addendum to the plans or proposal. This addendum involves revised and/or added material.

- 1. Revised the Table of Contents to the Special Provisions
- 2. Added pages 96-103 to the Special Provisions

Prime contractors must utilize the enclosed material when preparing their bid and must include any Schedule of Prices changes in their bidding proposal.

Bidders using computer-generated bids are cautioned to reflect any and all Schedule of Prices changes, if involved, into their computer programs.

Very truly yours,

Maureen M. Addis, P.E.

Acting Engineer of Design and Environment

By: Ted B. Walschleger, P. E.

Telfer abuchly . A.E.

Engineer of Project Management

cc: Jeffrey L. Keirn, Region 5, District 9; Tim Kell; Estimates

CWR/ck

 A. Provide a description of the project location (include latitude and longitude): This project is located near Mile Marker 88.6 on SB FAI 57 in Jefferson Co. and near Mile Marker 56.6 on NB FAI 57 in Williamson Co. B. Provide a description of the construction activity which is subject of this plan: The proposed project consists of the construction of two Truss Mounted LED Dynamic Message Signs and Closed Circuit Television cameras along I-57. The proposed work includes installing the DMS 						
boards, cameras, and trusses. Construction also includes construction layout, temporary erosion control, traffic control and protection, guardrail, seeding, and various other items required to complete the planned improvements.						
C. Provide the estimated duration o						
60 days						
D. The total area of the construction site is estimated to be1.25 acres.						
The total area of the site estimated to be disturbed by excavation, grading or other activities is1.25 acres.						
E. The following is a weighted average completed:	E. The following is a weighted average of the runoff coefficient for this project after construction activities are completed:					
0.3						
F. List all soils found within project l	boundaries. Include map unit name, slope	information and erosivity:				
Bluford Silt Loam (1.5-4%) Slight erosivity

			Sc	plvents		Other (specify)	
		\boxtimes	Fe	ertilizers / Pesticides		Other (specify)	
II.	Co	ntrol	s				
 will be responsible for its implementation as indicated. The Contractor shall provide to the Resident Engineer a plan for the implementation of the measures indicated. The Contractor and subcontractors, will notify the Resident Engineer of any proposed changes, maintenance, or modifications to keep construction activities compliant with the Permit ILR10. Each such Contractor has signed the required certification on forms which are attached to, and are a part of, this plan: A. Erosion and Sediment Controls: At a minimum, controls must be coordinated, installed, and maintained to: Minimize the amount of soil exposed during construction activity; Minimize the disturbance of steep slopes; Maintain natural buffers around surface waters, direct storm water to vegetated areas to increase sediment removal and maximize storm water infiltration, unless infeasible; Minimize soil compaction and, unless infeasible, preserve topsoil. B. Stabilization Practices: Provided below is a description of interim and permanent stabilization practices, including site-specific scheduling of the implementation of the practices. Site plans will ensure that existing vegetation is preserved where attainable and disturbed portions of the site will be stabilized. Stabilization practices may include but are not limited to: temporary seeding, permanent seeding, mulching, geotextiles, sodding, vegetative buffer strips, protection of trees, preservation of mature vegetation, and other appropriate measures. Except as provided below in II(B)(1) and II(B)(2), stabilization measures shall be initiated immediately where construction activities have temporarily or permanently ceased, but in no case more than one (1) day after the construction activity in that portion of the site has temporarily or permanently ceases on all disturbed portions of the site where construction will not occur for a period of fourteen (14) or more calendar days. 							
	 Where the initiation of stabilization measures is precluded by snow cover, stabilization measures shall be initiated as soon as practicable. On areas where construction activity has temporarily ceased and will resume after fourteen (14) days, a temporary stabilization method can be used. 						
		The	foll	owing stabilization practices will be use	ed fo	r this project:	
			X	Preservation of Mature Vegetation		Erosion Control Blanket / Mulching	
		[Vegetated Buffer Strips		Sodding	
		[Protection of Trees		Geotextiles	
Prir	ited 6	/1/16			Pa	age 3 of 8	BDE 2342 (Rev. 09/29/15)

	☐ Temporary Erosion Control Seeding	Other (specify)			
	☐ Temporary Turf (Seeding, Class 7)	Other (specify)			
		Other (specify)			
	□ Permanent Seeding	Other (specify)			
	Describe how the stabilization practices lister	d above will be utilized during construction:			
	Vegatative cover should meet specificati				
	Describe how the stabilization practices lister completed:	d above will be utilized after construction activities have been			
	Permanent seeding will remain in place.				
C.	Structural Practices: Provided below is a description of structural practices that will be implemented, to the degree attainable, to divert flows from exposed soils, store flows or otherwise limit runoff and the discharge of pollutants from exposed areas of the site. Such practices may include but are not limited to: perimeter erosion barrier, earth dikes, drainage swales, sediment traps, ditch checks, subsurface drains, pipe slope drains, level spreaders, storm drain inlet protection, rock outlet protection, reinforced soil retaining systems, gabions, and temporary or permanent sediment basins. The installation of these devices may be subject to Section 404 of the Clean Water Act.				
	The following stabilization practices will be us	sed for this project:			
	Perimeter Erosion Barrier	Rock Outlet Protection			
	☐ Temporary Ditch Check	Riprap			
	Storm Drain Inlet Protection	Gabions			
	☐ Sediment Trap	☐ Slope Mattress			
	☐ Temporary Pipe Slope Drain	Retaining Walls			
	☐ Temporary Sediment Basin	☐ Slope Walls			
	☐ Temporary Stream Crossing	☐ Concrete Revetment Mats			
	☐ Stabilized Construction Exits	Level Spreaders			
	☐ Turf Reinforcement Mats	Other (specify)			
	☐ Permanent Check Dams	Other (specify)			
	Permanent Sediment Basin	Other (specify)			
	☐ Aggregate Ditch	Other (specify)			
	☐ Paved Ditch	Other (specify)			
	Describe how the structural practices listed a	bove will be utilized during construction:			
	Perimeter Erosion Barrier will be used during construction to prevent erosion.				
	Describe how the structural practices listed a	bove will be utilized after construction activities have been completed:			
D.	Treatment Chemicals				
	Will polymer flocculents or treatment chemical	als be utilized on this project: Yes No			
If yes above, identify where and how polymer flocculents or treatment chemicals will be utilized on this project					
E.	Permanent Storm Water Management Controls: Provided below is a description of measures that will be installed during the construction process to control volume and pollutants in storm water discharges that will occur after construction operations have been completed. The installation of these devices may be subject to Section 404 of the Clean Water act.				
Printed 6	5/1/16	Page 4 of 8 BDE 2342 (Rev. 09/29/			

Added 6/1/16

BDE 2342 (Rev. 09/29/15)

Such practices may include but are not limited to: storm water detention structures (including wet ponds), storm
water retention structures, flow attenuation by use of open vegetated swales and natural depressions, infiltration
of runoff on site, and sequential systems (which combine several practices).

The practices selected for implementation were determined on the basis of the technical guidance in Chapter 41 (Construction Site Storm Water Pollution Control) of the IDOT Bureau of Design & Environment Manual. If practices other than those discussed in Chapter 41 are selected for implementation or if practices are applied to situations different from those covered in Chapter 41, the technical basis for such decisions will be explained below.

Velocity dissipation devices will be placed at discharge locations and along the length of any outfall channel as necessary to provide a non-erosive velocity flow from the structure to a water course so that the natural physical and biological characteristics and functions are maintained and protected (e.g. maintenance of hydrologic conditions such as the hydroperiod and hydrodynamics present prior to the initiation of construction activities).

Description of permanent storm water management controls:

N/A

F. Approved State or Local Laws: The management practices, controls, and provisions contained in this plan will be in accordance with IDOT specifications, which are at least as protective as the requirements contained in the Illinois Environmental Protection Agency's Illinois Urban Manual. Procedures and requirements specified in applicable sediment and erosion site plans or storm water management plans approved by local officials shall be described or incorporated by reference in the space provided below. Requirements specified in sediment and erosion site plans, site permits, storm water management site plans or site permits approved by local officials that are applicable to protecting surface water resources are, upon submittal of an NOI, to be authorized to discharge under the Permit ILR10 incorporated by reference and are enforceable under this permit even if they are not specifically included in the plan.

Description of procedures and requirements specified in applicable sediment and erosion site plans or storm water management plans approved by local officials:

N/A

- G. Contractor Required Submittals: Prior to conducting any professional services at the site covered by this plan, the Contractor and each subcontractor responsible for compliance with the permit shall submit to the Resident Engineer a Contractor Certification Statement, BDE 2342a.
 - The Contractor shall provide a construction schedule containing an adequate level of detail to show major activities with implementation of pollution prevention BMPs, including the following items:
 - · Approximate duration of the project, including each stage of the project
 - Rainy season, dry season, and winter shutdown dates
 - Temporary stabilization measures to be employed by contract phases
 - · Mobilization time frame
 - · Mass clearing and grubbing/roadside clearing dates
 - · Deployment of Erosion Control Practices
 - Deployment of Sediment Control Practices (including stabilized construction entrances/exits)
 - Deployment of Construction Site Management Practices (including concrete washout facilities, chemical storage, refueling locations, etc.)
 - Paving, saw-cutting, and any other pavement related operations
 - Major planned stockpiling operations
 - Time frame for other significant long-term operations or activities that may plan non-storm water discharges such as dewatering, grinding, etc.
 - · Permanent stabilization activities for each area of the project
 - 2. The Contractor and each subcontractor shall provide, as an attachment to their signed Contractor Certification Statement, a discussion of how they will comply with the requirements of the permit in regard to the following items and provide a graphical representation showing location and type of BMPs to be used when applicable:

Printed 6/1/16 Page 5 of 8 BDE 2342 (Rev. 09/29/15)

- Vehicle Entrances and Exits Identify type and location of stabilized construction entrances and exits to be used and how they will be maintained.
- Material delivery, Storage, and Use Discuss where and how materials including chemicals, concrete curing compounds, petroleum products, etc. will be stored for this project.
- Stockpile Management Identify the location of both on-site and off-site stockpiles. Discuss what BMPs will be used to prevent pollution of storm water from stockpiles.
- · Waste Disposal Discuss methods of waste disposal that will be used for this project.
- Spill Prevention and Control Discuss steps that will be taken in the event of a material spill (chemicals, concrete curing compounds, petroleum, etc.).
- Concrete Residuals and Washout Wastes Discuss the location and type of concrete washout facilities to be used on this project and how they will be signed and maintained.
- Litter Management Discuss how litter will be maintained for this project (education of employees, number of dumpsters, frequency of dumpster pick-up, etc.).
- Vehicle and Equipment Cleaning and Maintenance Identify where equipment cleaning and maintenance locations for this project and what BMPs will be used to ensure containment and spill prevention.
- Dewatering Activities Identify the controls which will be used during dewatering operations to ensure sediments will not leave the construction site.
- Polymer Flocculants and Treatment Chemicals Identify the use and dosage of treatment chemicals and
 provide the Resident Engineer with Material Safety Data Sheets. Describe procedures on how the
 chemicals will be used and identify who will be responsible for the use and application of these
 chemicals. The selected individual must be trained on the established procedures.
- · Additional measures indicated in the plan.

III. Maintenance

When requested by the Contractor, the Resident Engineer will provide general maintenance guides to the Contractor for the practices associated with this project. The following additional procedures will be used to maintain, in good and effective operating conditions, the vegetation, erosion and sediment control measures and other protective measures identified in this plan. It will be Contractor's responsibility to attain maintenance guidelines for any manufactured BMPs which are to be installed and maintained per manufacture's specifications.

All erosion control devices will be maintained in accordance with Article 280.05 of the Standard Specifications for Road and Bridge Construction.

IV. Inspections

Printed 6/1/16

Page 6 of 8

BDE 2342 (Rev. 09/29/15)

Qualified personnel shall inspect disturbed areas of the construction site which have not yet been finally stabilized, structural control measures, and locations where vehicles and equipment enter and exit the site using IDOT Storm Water Pollution Prevention Plan Erosion Control Inspection Report (BC 2259). Such inspections shall be conducted at least once every seven (7) calendar days and within twenty-four (24) hours of the end of a storm or by the end of the following business or work day that is 0.5 inch or greater or equivalent snowfall.

Inspections may be reduced to once per month when construction activities have ceased due to frozen conditions. Weekly inspections will recommence when construction activities are conducted, or if there is 0.5" or greater rain event, or a discharge due to snowmelt occurs.

If any violation of the provisions of this plan is identified during the conduct of the construction work covered by this plan, the Resident Engineer shall notify the appropriate IEPA Field Operations Section office by e-mail at: epa.swnoncomp@illinois.gov, telephone or fax within twenty-four (24) hours of the incident. The Resident Engineer shall then complete and submit an "Incidence of Non-Compliance" (ION) report for the identified violation within five (5) days of the incident. The Resident Engineer shall use forms provided by IEPA and shall include specific information on the cause of noncompliance, actions which were taken to prevent any further causes of noncompliance, and a statement detailing any environmental impact which may have resulted from the noncompliance. All reports of non-compliance shall be signed by a responsible authority in accordance with Part VI. G of the Permit ILR10.

The Incidence of Non-Compliance shall be mailed to the following address:

Illinois Environmental Protection Agency Division of Water Pollution Control Attn: Compliance Assurance Section 1021 North Grand East Post Office Box 19276 Springfield, Illinois 62794-9276

Additional Inspections Required:

V. Failure to Comply

Failure to comply with any provisions of this Storm Water Pollution Prevention Plan will result in the implementation of a National Pollutant Discharge Elimination System/Erosion and Sediment Control Deficiency Deduction against the Contractor and/or penalties under the Permit ILR10 which could be passed on to the Contractor.

Printed 6/1/16

Page 7 of 8

BDE 2342 (Rev. 09/29/15)

Contractor Certification Statement

Prior to conducting any professional services at the site covered by this contract, the Contractor and every subcontractor must complete and return to the Resident Engineer the following certification. A separate certification must be submitted by each firm. Attach to this certification all items required by Section II.G of the Storm Water Pollution Prevention Plan (SWPPP) which will be handled by the Contractors/subcontractor completing this form.
