NET LENGTH OF PROPOSED IMPROVEMENT
7285.21 LIN. FT. (INCLUDING RAMPS)

LAYOUT
SCALE = 1" = 2000'

THE PROPOSED IMPROVEMENT INCLUDES THE CONSTRUCTION OF THE CONCRETE DECK OF THE WEST BOUND STRUCTURE CARRYING F.A. ROUTE 49 OVER THE ILLINOIS RIVER AT PEORIA. ALSO INCLUDED IS THE "OFF" RAMP CONNECTION TO ADAMS ST. THE IMPROVEMENT FURTHER PROVIDES FOR A CONCRETE DECK WITH A WATER-PROOFED BITUMINOUS CONCRETE SURFACE FOR THE "ON" RAMP FROM ADAMS ST. IN PEORIA TO THE EXISTING STRUCTURE THAT WILL CARRY THE EAST BOUND TRAFFIC OF F.A. ROUTE 49.

GENERAL NOTES

1. Fasteners shall be high strength bolts. Bolts 1"ϕ, open holes 1 1/16"ϕ unless otherwise noted.
2. Field welding of construction accessories will not be permitted to the bottom flange of beams or girders nor to the top flange for a distance equal to one-fourth the span length each way from the pier supports. Field welding in other areas will be permitted only when approved by the Engineer.
3. Plan dimensions and details relative to existing structure have been taken from existing plans and are subject to nominal construction variations. It shall be the Contractor's responsibility to verify such dimensions and details in the field and make necessary approved adjustments prior to construction or ordering of materials. Such variations shall not be cause for additional compensation for a change in the scope of the work, however, the Contractor will be paid for the quantity actually furnished at the unit price bid for the work.
4. Protective Coat shall not be applied to surfaces to which Waterproofing Membrane System is to be applied.
5. All reinforcement bars in the slab and curbs shall be AASHTO M 31 or M 53 Gr. 60.
6. A Calcium Nitrite Corrosion Inhibitor, as covered in the Special Provisions, shall be used in the concrete for Parapets and Curbs.
7. The basic lead silico chromate paint system shall be used for shop and spot painting of Structural Steel & Steel Railing.
8. All field drilled holes shall be Incidental to this Contract except as noted.
9. Calculated weight of Str. Steel = 14,640 Lbs. (M 183)
10. The Parapet and Curb Concrete above the mandatory construction joint at the top of the slab shall be constructed of Class X Concrete, except the aggregates shall conform to the requirements of Handrail Concrete.

Note: All dimensions shown are measured horizontally.

LOCATION MAP

GENERAL NOTES

1. Fasteners shall be high strength bolts. Bolts 1"Φ, open holes 1 1/16"Φ unless otherwise noted.
2. Field welding of construction accessories will not be permitted to the bottom flange of beams or girders nor to the top flange for a distance equal to one-fourth the span length each way from the pier supports. Field welding in other areas will be permitted only when approved by the Engineer.
3. Plan dimensions and details relative to existing structure have been taken from existing plans and are subject to nominal construction variations. It shall be the Contractor's responsibility to verify such dimensions and details in the field and make necessary approved adjustments prior to construction or ordering of materials. Such variations shall not be cause for additional compensation for a change in the scope of the work, however, the Contractor will be paid for the quantity actually furnished at the unit price bid for the work.
4. Protective Coat shall not be applied to surfaces to which Waterproofing Membrane System is to be applied.
5. All reinforcement bars in the slab and curbs shall be AASHTO M 31 or M 53 Gr. 60.
6. A Calcium Nitrite Corrosion Inhibitor, as covered in the Special Provisions, shall be used in the concrete for Parapets and Curbs.
7. The basic lead silico chromate paint system shall be used for shop and spot painting of Structural Steel & Steel Railing.
8. All field drilled holes shall be Incidental to this Contract except as noted.
9. Calculated weight of Str. Steel = 14,640 Lbs. (M 183)

NOTES

All structural steel shall meet the requirements of AASHTO M-183 unless otherwise shown.

All High Strength Bolts and Anchor Bolts shall meet the requirements of AASHTO M-164.

Broken Concrete Drainage Ditches shall be placed as directed by the Engineer.

All dimensions shown are measured horizontally.

Pay item Drainage System Complete shall include providing and installing 12"ϕ pipe, 6"ϕ pipe, saddles, elbows, tees, sleeves, inserts, hangers, straps, cleanouts, and all other necessary items to complete the underdeck drainage.

Note : The girder deflections and the floor beam deflections are not to be used in the field if the Engineer is working from the grade elevations adjusted for dead load deflections as shown in "Elevations – Top of Concrete" tables.

Note:
Elev. A = Theoretical Grade Elevations
Elev. B = Theoretical Grade Elevations Adjusted For Dead Load Deflection.
For notes on method of determining fillet heights "t" see sheet 30 of 88.

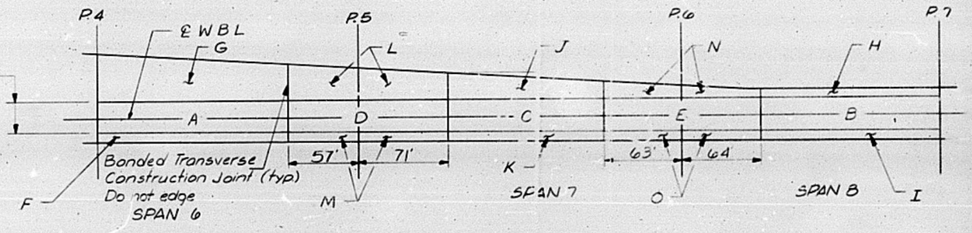
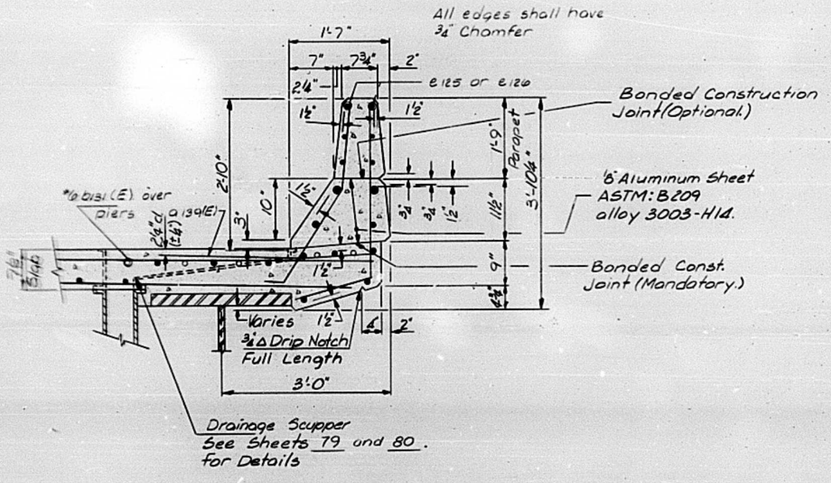
PLAN OF CURB JOINTS





CURB SECTION

Cost of Aluminum Sheets shall be incidental to Class X Concrete

SLAB POURING SEQUENCE

Note: The concrete floor slab shall be poured in one continuous operation between construction joints. The pouring shall be done in the following order: 1) A-B, 2) C, 3) F-G, 4) H-I, 5) J-K, 6) D-E, 7) L-M, 8) N-O. DLM & ENO must not be poured before AFG, BHI, & CJK. If the area C is not poured on the same day as A and B, then there should be a seven (7) day time lapse between pours.

ELEVATIONS - TOP OF CONCRETE

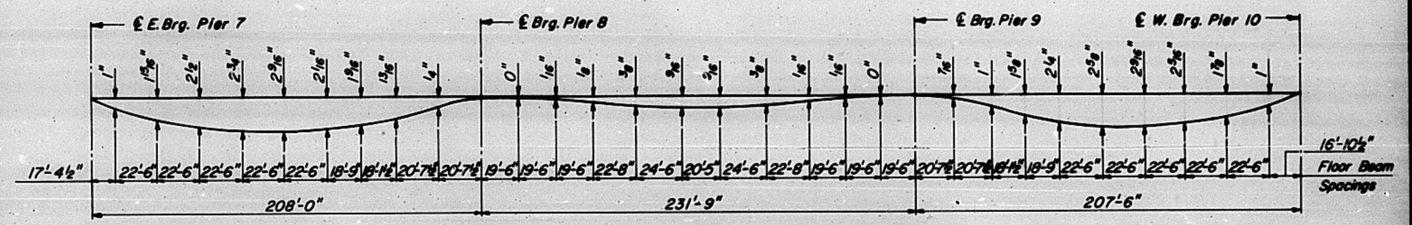
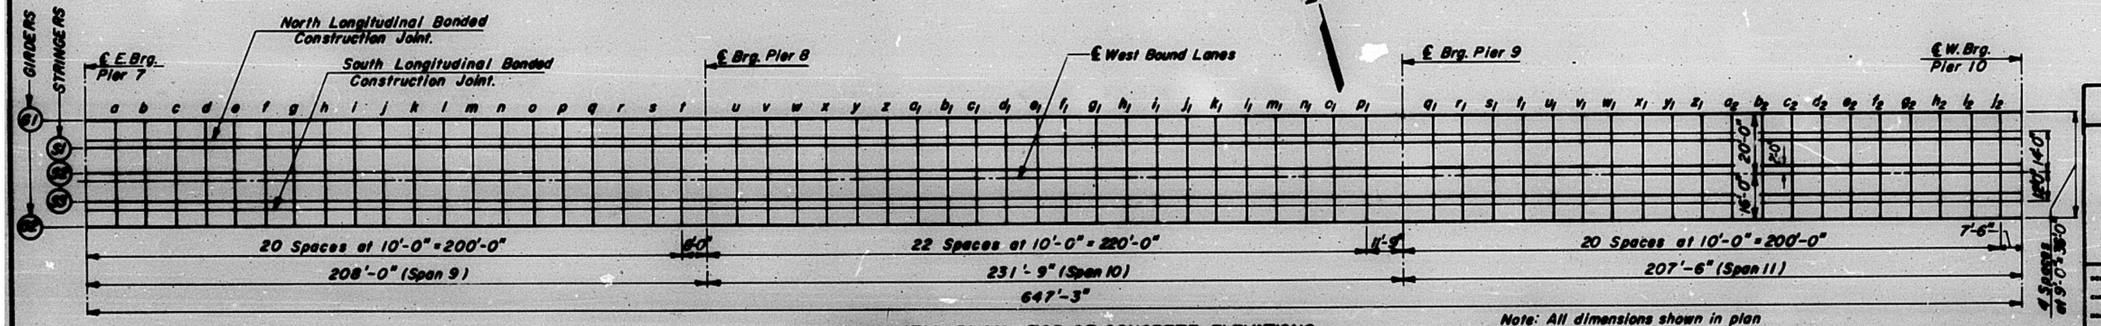
FLOOR BEAM DEFLECTION DIAGRAM



GIRDERS 1 & 2 DEAD LOAD DEFLECTION DIAGRAM
(Includes Weight of Concrete Slab)

Note: The girder deflections and the floor beam deflections are not to be used in the field if the Engineer is working from the grade elevations adjusted for dead load deflections as shown in "Elevations - Top of Concrete" tables.

Note: For notes on method of determining fillet heights "t" see sheet 30 of 88.



DIAGRAMMATIC PLAN - TOP OF CONCRETE ELEVATIONS

Note: All dimensions shown in plan are measured horizontally.

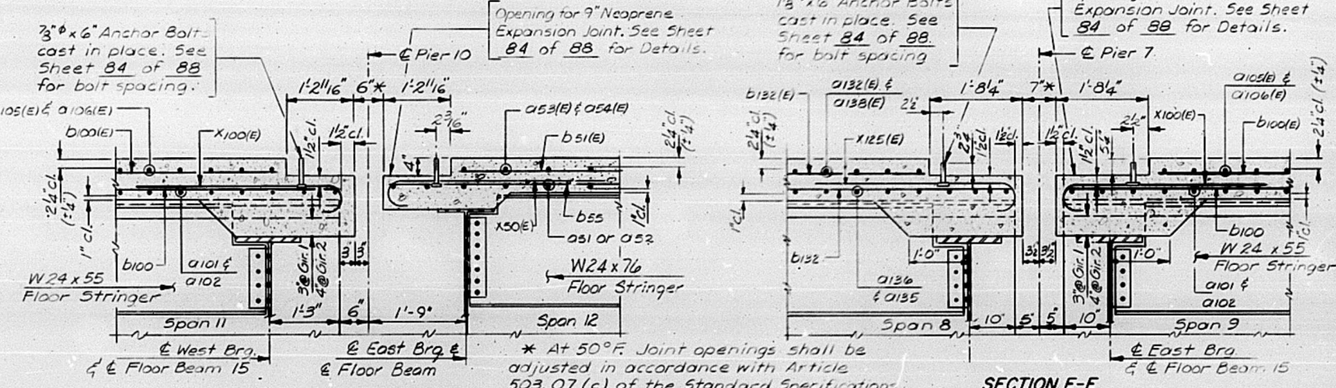
Sheet 23 of 88

ELEVATION - CURB & PARAPET

Note: All dimensions shown are measured horizontally.

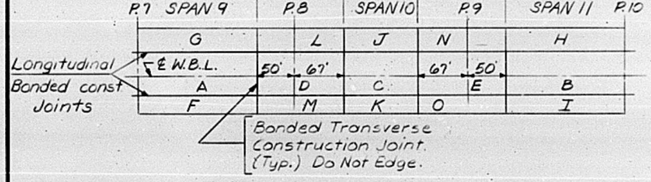


* At 50°F. Joint openings shall be adjusted in accordance with Article 503.07(c) of the Standard Specifications if the deck is poured at an ambient temperature other than 50°F.

SECTION D-D

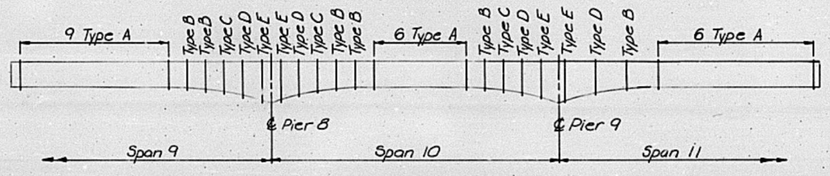
(From sheet 22 of 88 & From sheet 26 of 88)

SECTION E-E



Note: The concrete floor slab shall be poured in one continuous operation between construction joints. The pouring shall be done in the following order: 1) A-B 2) C 3) F-G 4) H-I 5) J-K 6) D-E 7) L-M 8) N-O DLM & ENO must not be poured before AFG, BHI & CJK. If the area C is not poured on the same day as A and B, then there should be a seven (7) day time lapse between pours.

SLAB POURING SEQUENCE



ELEVATION 4"x 12" FLOOR DRAIN DOWNSPOUTS

Note: See Slab Plan for spacing of 4" x 12" Floor Drains.

Note: Drains shall be located along both N & S. curbs and clear of all diaphragms, floor beams, lateral bracing & Drainage Scuppers.

4" x 12" FLOOR DRAIN DOWNSPOUT LENGTHS (SPANS 9,10&11)

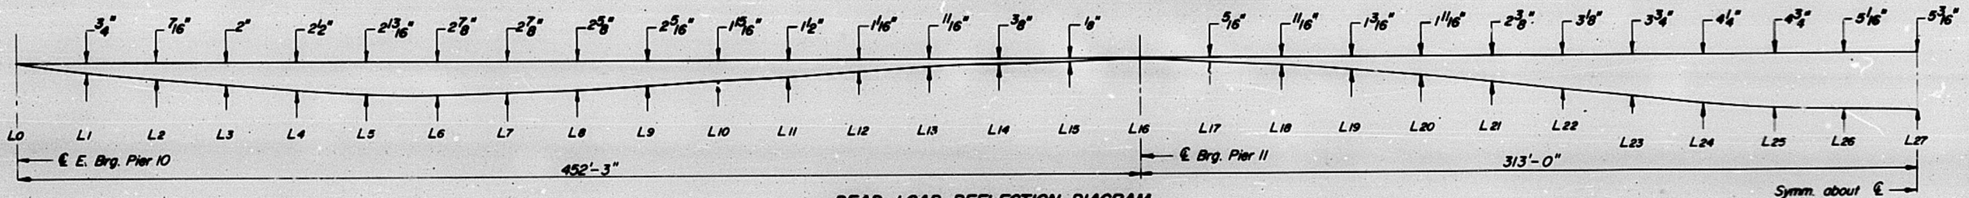
FLOOR BEAM
DEAD LOAD DEFLECTION DIAGRAM

ELEV A = THEORETICAL GRADE ELEVATIONS
ELEV B = THEORETICAL GRADE ELEVATIONS ADJUSTED FOR DEAD LOAD DEFLECTION

ELEVATIONS - TOP OF CONCRETE



DEAD LOAD DEFLECTION DIAGRAM
(Includes Weight of Concrete Slab)

Note: The above deflections are not to be used in the field if the Engineer is working from the grade elevations adjusted for dead load deflections as shown in "Elevations – Top of Concrete" tables.

Note: For notes on method of determining fillet heights "f" see sheet 30 of 88.

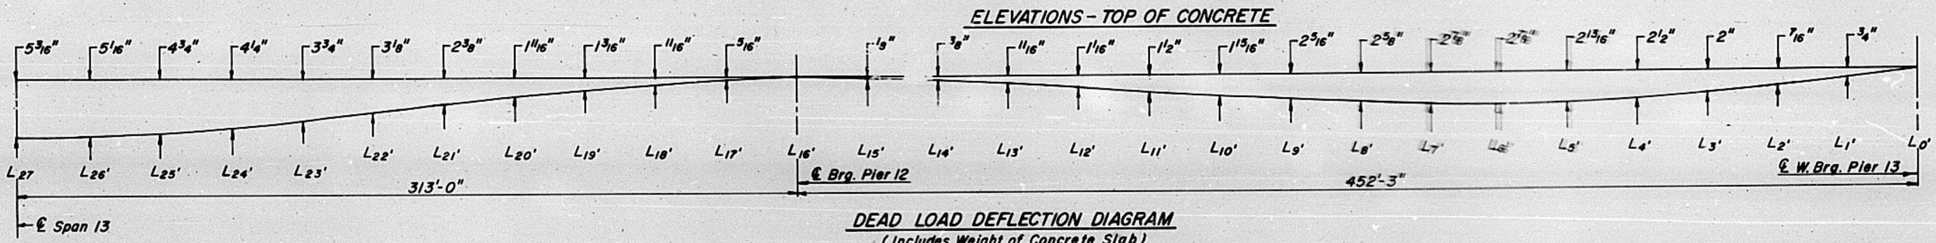
ELEVATIONS – TOP OF CONCRETE



DEAD LOAD DEFLECTION DIAGRAM
(Includes Weight of Concrete Slab)

Note: The above deflections are not to be used in the field if the Engineer is working from the grade elevations adjusted for dead load deflections as shown in "Elevations – Top of Concrete" tables.

Note: For notes on method of determining fillet heights "i" see sheet 30 of 88.

ELEV. A = THEORETICAL GRADE ELEVATIONS
ELEV. B = THEORETICAL GRADE ELEVATIONS ADJUSTED FOR DEAD LOAD DEFLECTION

TOP OF SLAB ELEVATIONS
SPANS 12, 13 & 14

McCLUGAGE BRIDGE
OVER THE ILLINOIS RIVER
F.A. ROUTE 49 SEC. (15B-1)-D
PEORIA & TAZEWELL COUNTIES

DESIGNED W.D.L.
DRAWN S.C.Q.
TRACED M.L.B.
CHECKED S.C.C.

HANSON ENGINEERS INCORPORATED
SPRINGFIELD, PEORIA & ROCKFORD, ILLINOIS

FILE NO. 74001
DATE 8-22-80

NOTES:
All dimensions shown are measured horizontally.
Bars indicated thus: 20x3-#5 etc. indicates 20 lines of bars with 3 lengths per line.
See sheets 27 & 28 for superstructure details & Bill of Material.
Reinforcement bars designated (E) shall be epoxy coated. See Special Provisions.

STATE OF ILLINOIS
DEPARTMENT OF TRANSPORTATION
DIVISION OF HIGHWAYS

NOTES:
For Sections A-A, A'-A', B-B & C-C see sheet 28 of 88.
For Section D-D see sheet 23 of 88.
For Section @ Lo see Section A-A on sheet 27 of 88.
For curb & parapet details see sheet 27 of 88.

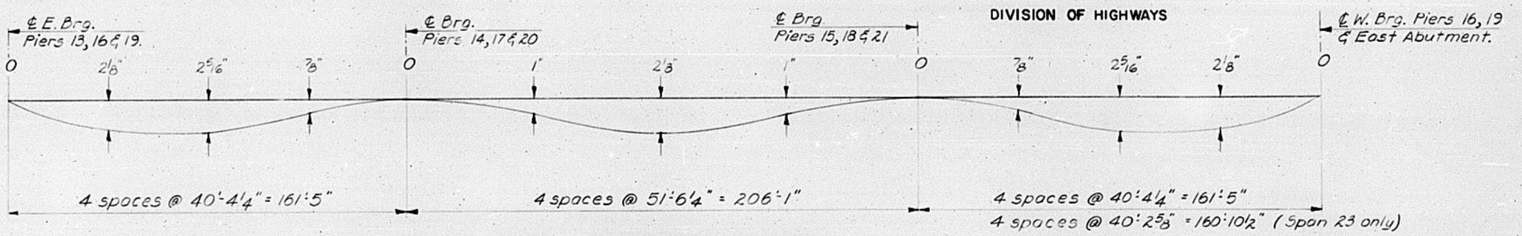
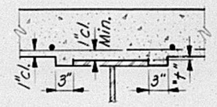
Sheet 30 of 88

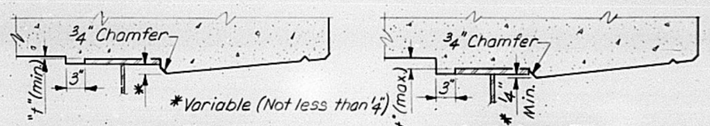


DEAD LOAD DEFLECTION DIAGRAM
(Includes weight of concrete slab.)

Note: The above deflections are not to be used in the field if the Engineer is working from the grade elevations (Elev. B) of the "Top of Concrete" tables on sheets 31 of 88 thru 33 of 88.



INTERIOR BEAMS



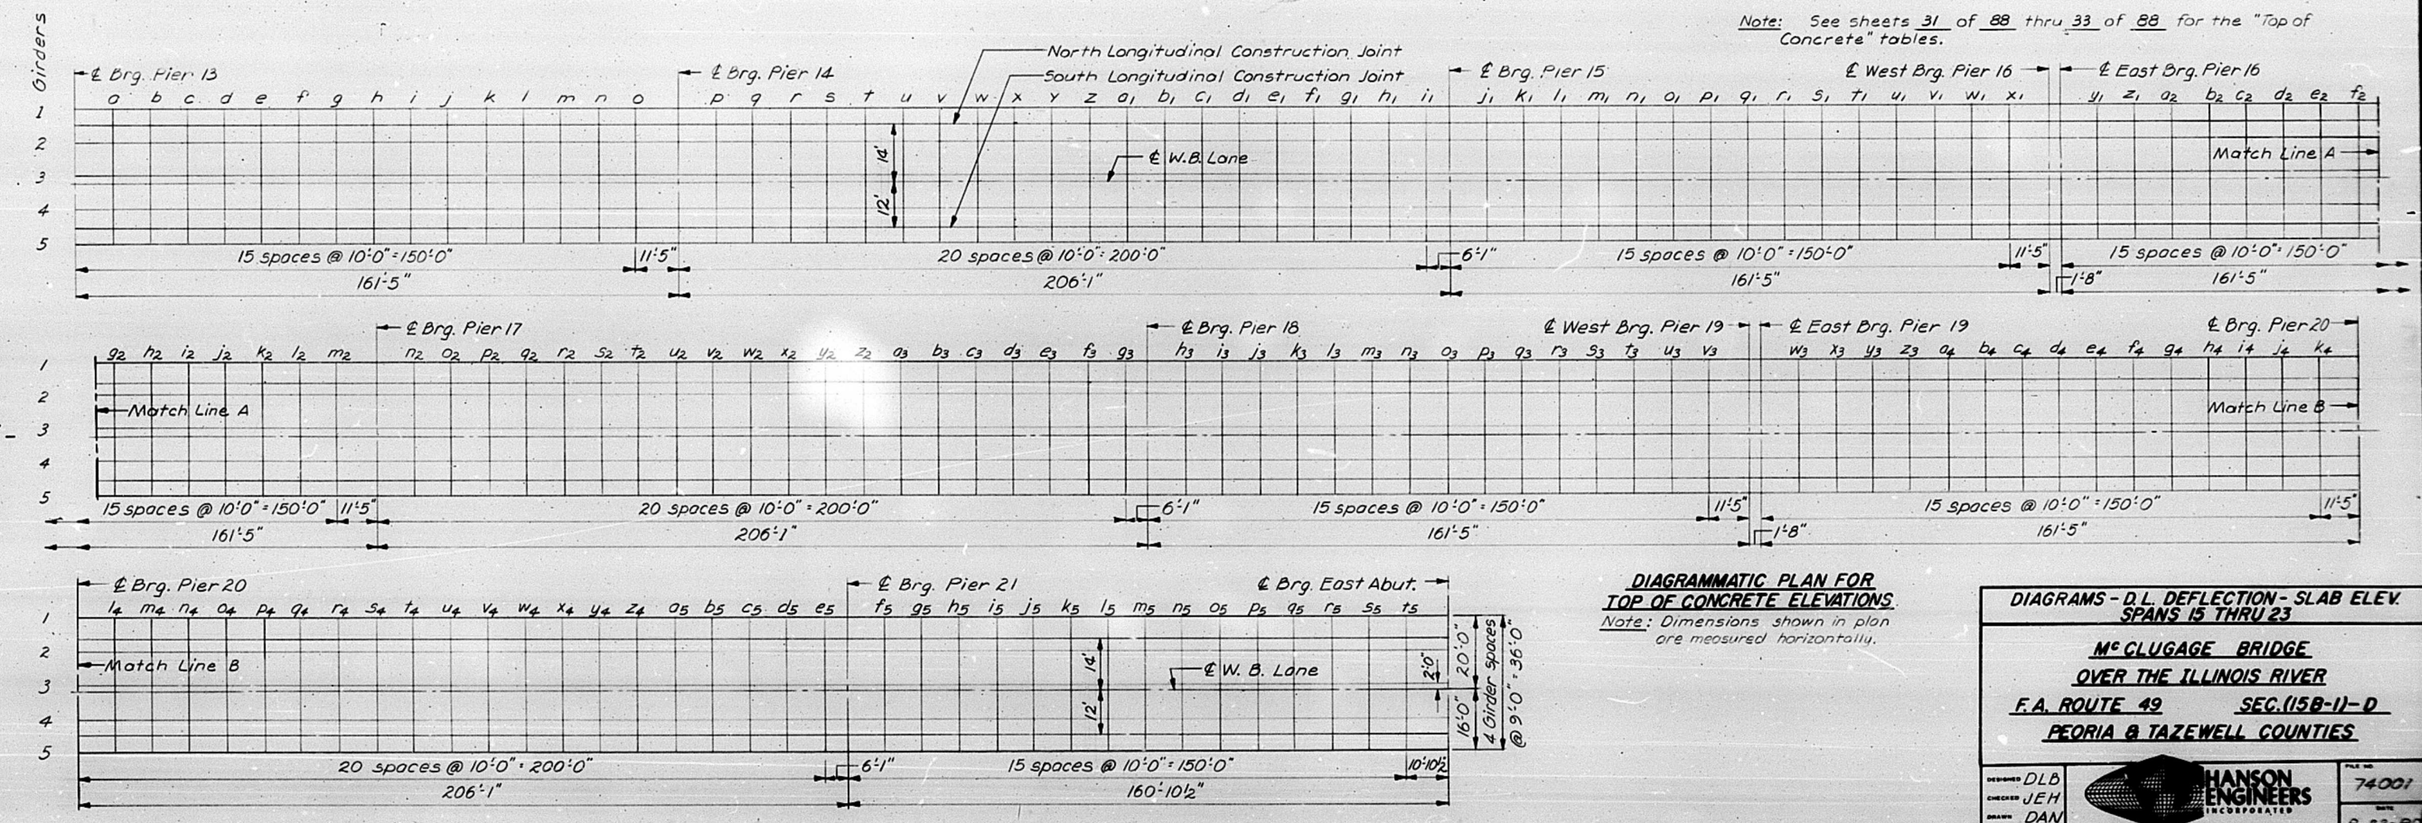
At Minimum Fillet **At Maximum Fillet**

EXTERIOR BEAMS

METHOD OF DETERMING FILLET HEIGHTS "t"

After all Structural Steel has been erected, elevations of the top flanges of the girders shall be taken at the stations shown in the "Top of Concrete" tables. These elevations subtracted from the "Theoretical Grade Elevations Adjusted for Dead Load Deflection" (Elev. B) shown in the "Top of Concrete" tables, minus the concrete slab thickness equals the fillet heights above the top flanges of the girders.

Note: See sheets 31 of 88 thru 33 of 88 for the "Top of Concrete" tables.



DIAGRAMMATIC PLAN FOR TOP OF CONCRETE ELEVATIONS

Note: Dimensions shown in plan are measured horizontally.

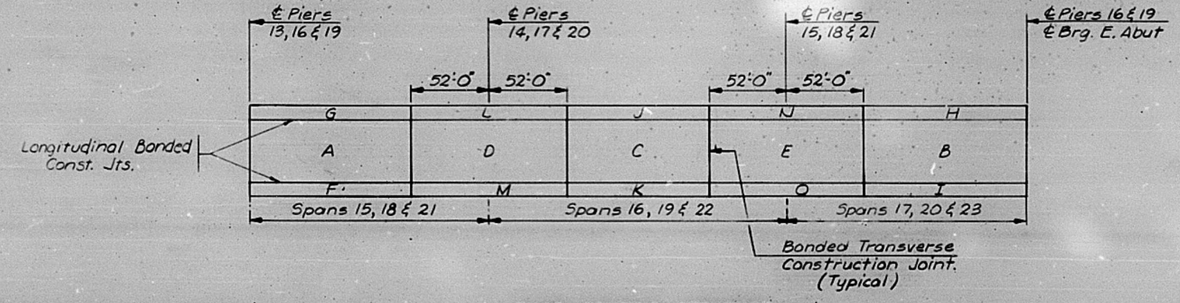
VIEW C-C

DETAIL OF END POSTS AT NORTH, SOUTH & EAST ABUTMENTS



SLAB POURING SEQUENCE

The concrete floor slab shall be poured in one continuous operation between construction joints.

The pouring shall be done in the following order:
1) A-B 2) C 3) F-G 4) H-I 5) J-K 6) D-E 7) L-M 8) N-O.
DLM & ENO must not be poured before AFG, BHI & CJK.
If the area C is not poured on the same day as A and B, then there should be a seven (7) day time lapse between pours.

Notes

All dimensions are measured along ℄ Girder.

N.T.R. refers to the Supplemental Requirements for Notch Toughness.

Note A: 1" x 10½" Connecting Plates.

Note B: ½" x 7½" Connecting Plates.

Note C: 11/16" x 10½" Connecting Plates.

Steel Specifications this sheet shall be AASHTO M183 Steel unless otherwise noted.
All work on this sheet is by others except Stud Shear Connectors.

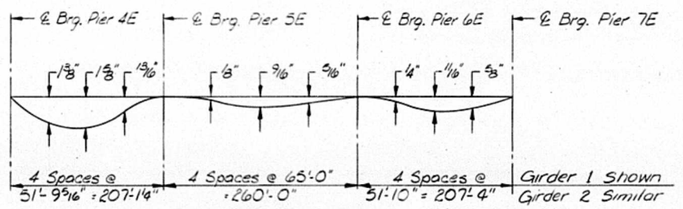
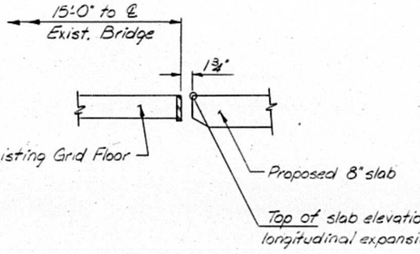
DIAGRAMMATIC PLAN - SPANS 6E & 7E
TOP OF CONCRETE ELEVATIONS

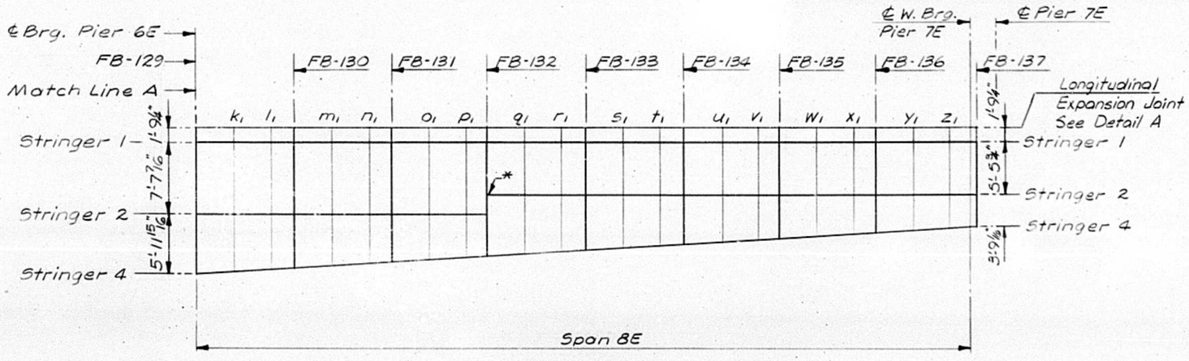


DEAD LOAD DEFLECTION DIAGRAM
(Includes Weight of Concrete Slab & Cl. I)

Note: The above deflections are not to be used in the field if the Engineer is working from the grade elevations adjusted for dead load deflections as shown in "Elevations - Top of Concrete" tables.



DETAIL A



DIAGRAMMATIC PLAN - SPAN 8E
TOP OF CONCRETE ELEVATIONS

Note: For notes on method of determining fillet heights "T" see sheet 30 of 88.

NOTES

F.B's 111 thru 116 are radial, therefore stringer stationing, shown on next sheet, is the same for all stringers at each F.B.

Points a thru l are not radial, therefore stringer stationing will be different at each point.

F.B.'s 117 thru 137 & points m thru z, have been adjusted for individual stringer stationing. Stations shown are stations of the intersection of F.B.'s & section lines with the profile grade line.

All dimensions shown are measured horizontally.

127	19'-5½"
128	18'-10⁹⁄₁₆"
129	18'-4⅜"
130	17'-9¹³⁄₁₆"
131	17'-3¼"
132	16'-8¹⁄₁₆"
133	16'-2⅛"
134	15'-7⁹⁄₁₆"
135	15'-0⅝"
136	14'-6⅜"
137	13'-11¹⁵⁄₁₆"

NOTES

Bars indicated thus 20 x 3-#5 indicates 20 lines of bars with 3 lengths per line.

See Sheet 61 of 88 for Bar Details & Bill of Material.

* = For spacing of b bars in Bottom of Slab see Cross Sections on Sheet 60 of 88.

** = Construction Joints in Curb to Top of Slab. (Insert ⅛" Aluminum Sheets.

For Light Pedestal Details see Sheet 3 of 88.

For Details of Longitudinal Reinforcement in Curbs see Sheet 62 of 88.

No., Size, Spacing & Locations of bars indicated only by bar designation - b330, a330 etc. are given in table entitled "Table of Slab Reinforcement" on Sheet 61 of 88.

Place Radially all Transverse Reinforcement between F.B. 111 & F.B. 117.

Transverse Reinforcement Bars a330 - a333 are spaced @ 7½"cts. along ℄ Stringer (S1).

For Sections A-A, C-C & D-D See Sheet 60 of 88.

For Section K-K See Spans 3E, 4E & 5E Sheet 52 of 88.

All dimensions shown are measured horizontally.

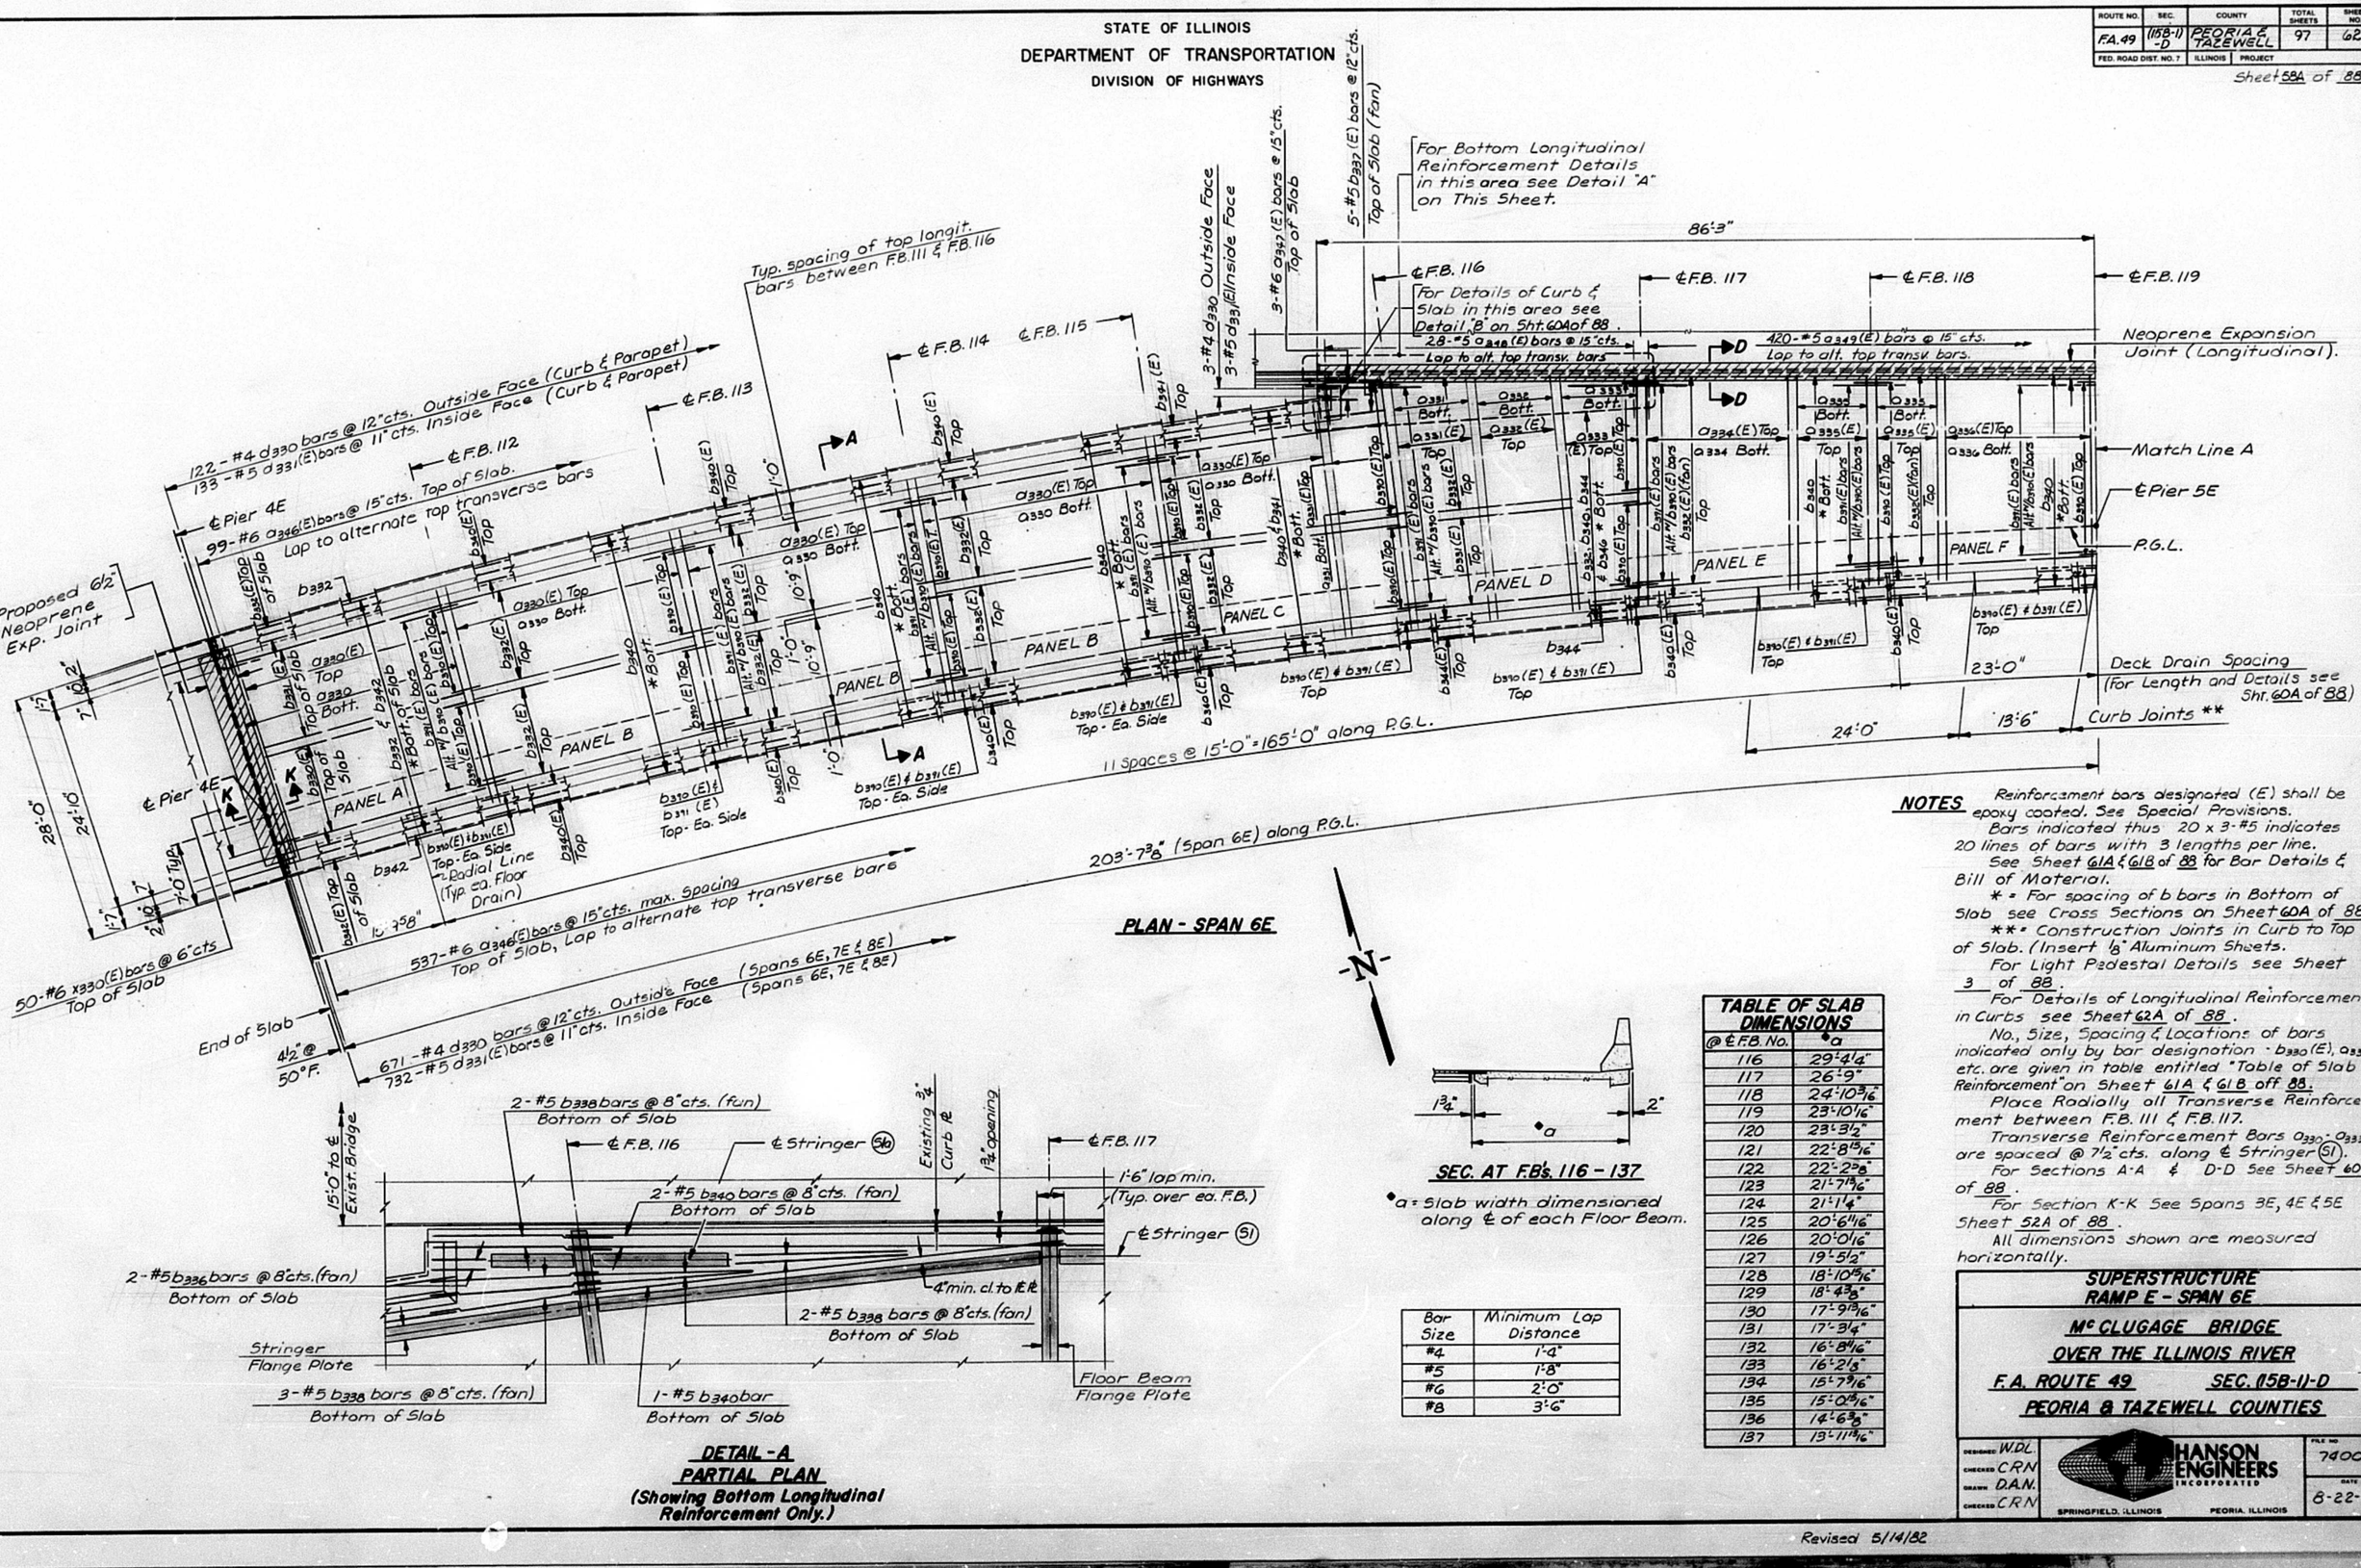
Sheet 58A of 88



PLAN - SPAN 6E

DETAIL - A
PARTIAL PLAN
(Showing Bottom Longitudinal Reinforcement Only.)

SEC. AT F.B's. 116 - 137

•a = Slab width dimensioned along ℄ of each Floor Beam.

Bar Size	Minimum Lap Distance
#4	1'-4"
#5	1'-8"
#6	2'-0"
#8	3'-6"

TABLE OF SLAB DIMENSIONS	
@ ℄ F.B. No.	•a
116	29'-4¼"
117	26'-9"
118	24'-10 3/16"
119	23'-10 1/16"
120	23'-3½"
121	22'-8 15/16"
122	22'-2⅝"
123	21'-7 13/16"
124	21'-1¼"
125	20'-6 11/16"
126	20'-0 1/16"
127	19'-5½"
128	18'-10 5/16"
129	18'-4⅜"
130	17'-9 13/16"
131	17'-3¼"
132	16'-8 1/16"
133	16'-2⅛"
134	15'-7 9/16"
135	15'-0 5/16"
136	14'-6 3/8"
137	13'-11 7/16"

NOTES

Reinforcement bars designated (E) shall be epoxy coated. See Special Provisions.

Bars indicated thus 20 x 3-#5 indicates 20 lines of bars with 3 lengths per line.

See Sheet 61A & 61B of 88 for Bar Details & Bill of Material.

* = For spacing of b bars in Bottom of Slab see Cross Sections on Sheet 60A of 88.

** = Construction Joints in Curb to Top of Slab. (Insert ⅛" Aluminum Sheets.

For Light Pedestal Details see Sheet 3 of 88.

For Details of Longitudinal Reinforcement in Curbs see Sheet 62A of 88.

No., Size, Spacing & Locations of bars indicated only by bar designation - b330(E), a330 etc. are given in table entitled "Table of Slab Reinforcement" on Sheet 61A & 61B off 88.

Place Radially all Transverse Reinforcement between F.B. 111 & F.B. 117.

Transverse Reinforcement Bars a330 - a333 are spaced @ 7½" cts. along ℄ Stringer (S1).

For Sections A-A & D-D See Sheet 60A of 88.

For Section K-K See Spans 3E, 4E & 5E Sheet 52A of 88.

All dimensions shown are measured horizontally.

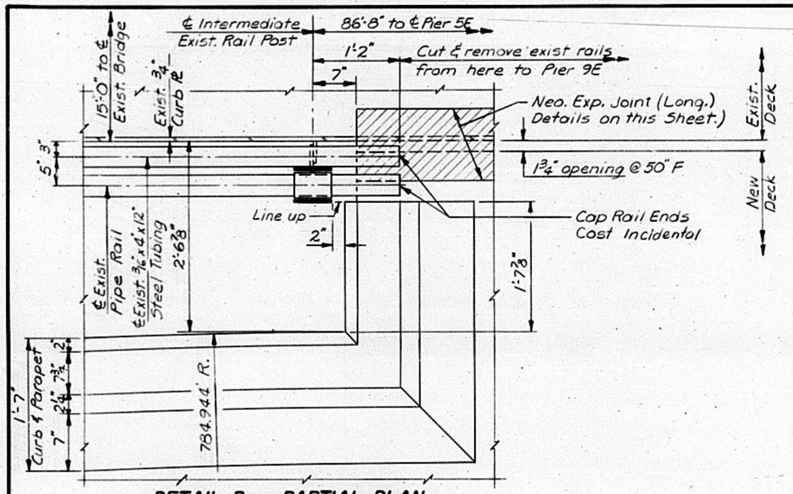
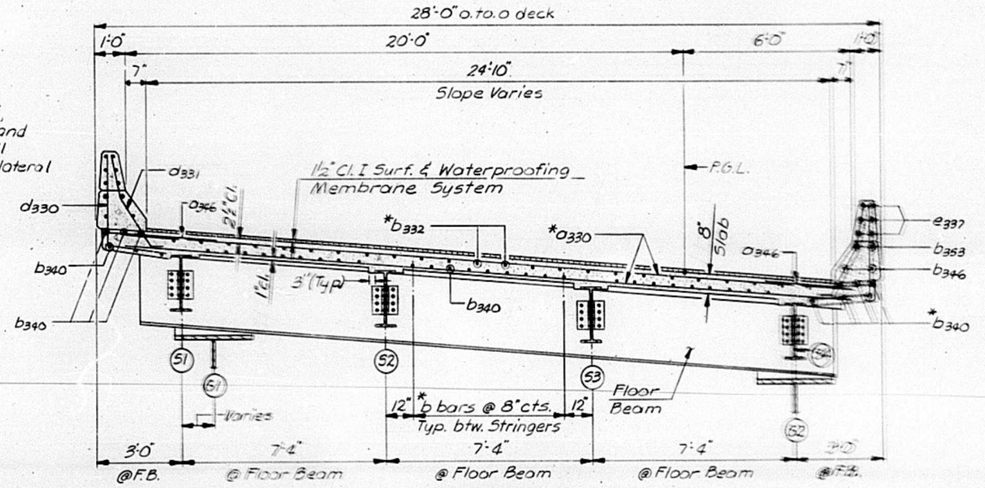
Sheet 60 of 88

* For bar, size, No. & spacing see "Table of Slab Reinf." on Sheet 61 of 88.



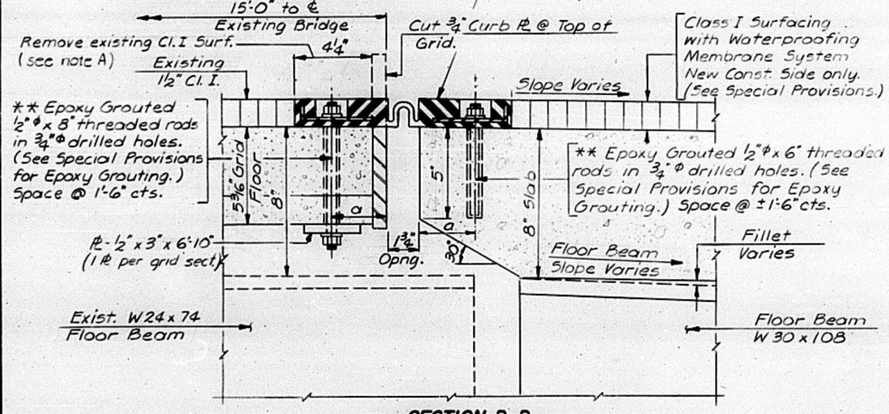
DETAIL B - PARTIAL PLAN
(Showing Curb & Slab at Junction Ramp E with Existing Bridge.)

SECTION THRU SOUTH PARAPET



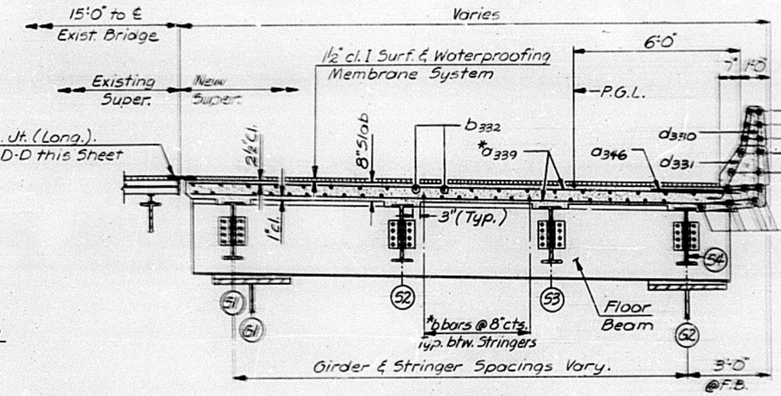
SECTION A-A
(Typ. at Floor Beams 111 - 115)

Neoprene Expansion Joint (Longitudinal). See Detail "A" on Sheet 8 of 88.



SECTION D-D
(See Sheet 58 of 88.)

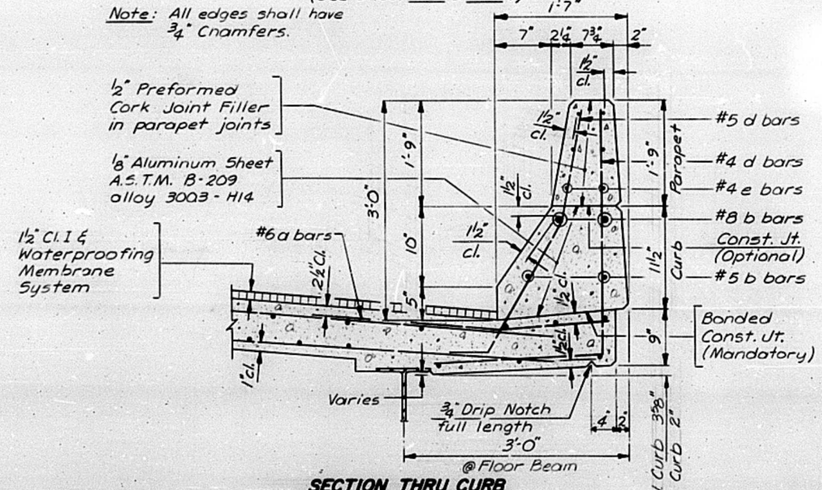
Note A: CL. I to be removed shall be saw cut 4¼" from inside face of curb plate. The vertical face of the remaining CL I shall be sealed with an approved epoxy sealant.



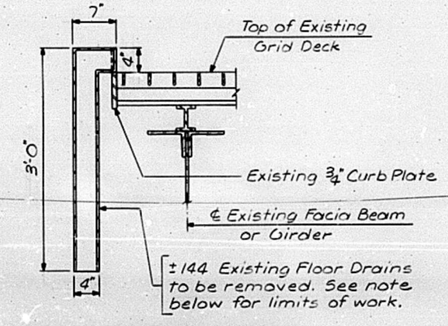
Note: For placement of e bars in parapet see sheet 63 of 88.
For placement of b bars in curb see sheet 62 of 88.

SECTION B-B
(Typ. at Floor Beams 116 - 137)

Note: All edges shall have ¾" Chamfers.

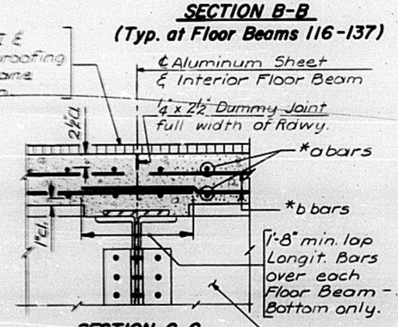


SECTION THRU CURB
Cost of Aluminum Sheets shall be incidental to Class X Concrete.



SECTION SHOWING REMOVAL OF EXISTING FLOOR DRAINS

Remove ±144 Existing Floor Drains from the South Side of the Existing Bridge starting at ±86'-3" West of ℄ Pier 5E and ending at ±2'-4" East of ℄ Pier 9E for a total distance of ±998'-10".



SECTION C-C
(See Sheet 58 of 88.)

SLAB POURING SEQUENCE

Note: The concrete floor slab shall be poured in one continuous operation between construction joints.

The pouring shall be done in alphabetical order. If the area C is not poured on the same day as A and B, then there should be a seven (7) day time lapse between pours.

SLAB POURING SEQUENCE

Note: The concrete floor slab shall be poured in one continuous operation between construction joints.

The pouring shall be done in alphabeticol order. If the area C is not poured on the same day as A and B, then there should be a seven (7) day time lapse between pours.

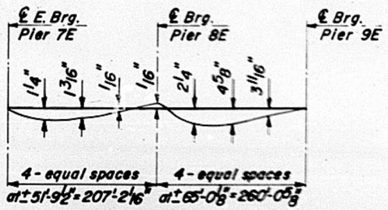
GIRDER 1



GIRDER 2

DEAD LOAD DEFLECTION DIAGRAMS

Note: The above deflections are not to be used in the field if the Engineer is working from The Theoretical Grade Elevations Adjusted for Dead Load Deflection (Elev. B) of the adjacent tables.

Note: Span IOE adjusted elevations include girder deflection plus additional adjustment due to rotation of pin connected floor beams.

SECTION B-B

SECTION A-A

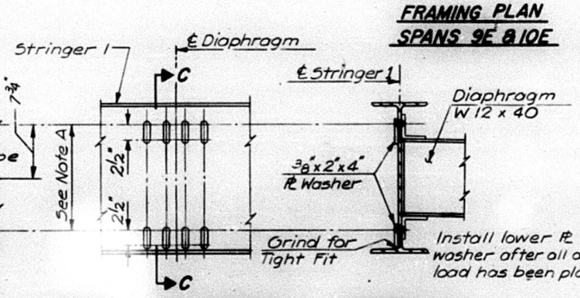
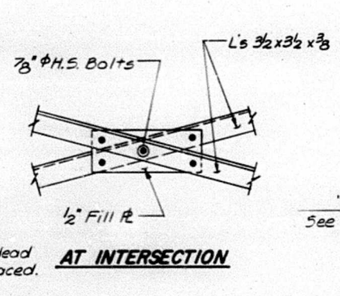
FRAMING PLAN SPANS 9E & 10E



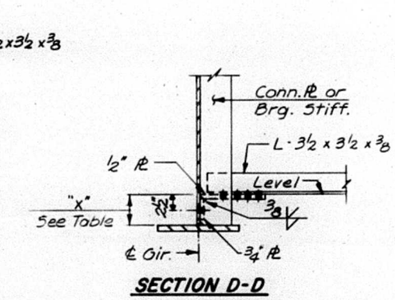
DETAIL AT STRINGER 1 SECTION C-C

NOTE A

℄ 1" Φ H.S. Bolts after all dead load is in place. Use 2½" slotted hole in all stringer 1 connections. Note that for the installation of diaphragms, the ℄ of the 1" Φ H.S. bolts will be near the bottom of the slots. All 1" Φ H.S. bolts used in the stringer 1 connection should have self-locking nuts. The nuts should be installed onto the bolts but not tightened, so that the stringer may be free to move as additional dead load deflects the girder-stringer system. The nuts should have the self-locking device in use during construction to prevent them from backing off of the bolt. After all dead load has been placed, the nuts on the stringer 1 connections should then be tightened by the deck contractor.



AT INTERSECTION



SECTION D-D

NOTES

* ℄ all Ramp E floor beams (spans 9E & 10E) will initially be offset 2½" East of ℄ of existing floor beams. After all dead load has been placed, offset will range from 0" to ⅛" East of existing floor beams.

All structural steel shall conform to AASHTO M183 unless otherwise noted.

All dimensions are measured horizontally and parallel or perpendicular to the centerline of survey unless otherwise shown.

All work on this sheet is by others except for Note A.

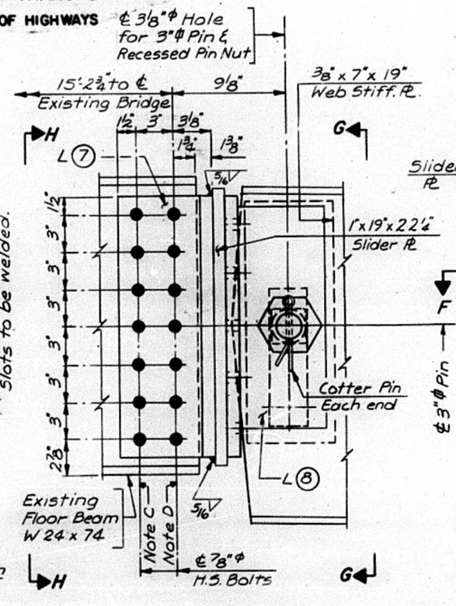
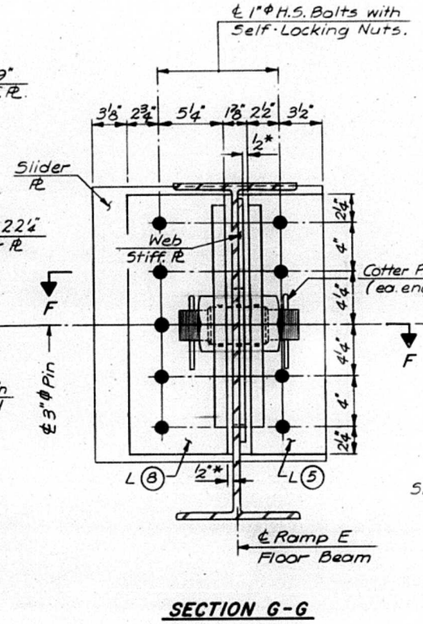
Note D: ℄ of existing ⅞"Φ rivet holes after removal of 6" stanchion rail post.

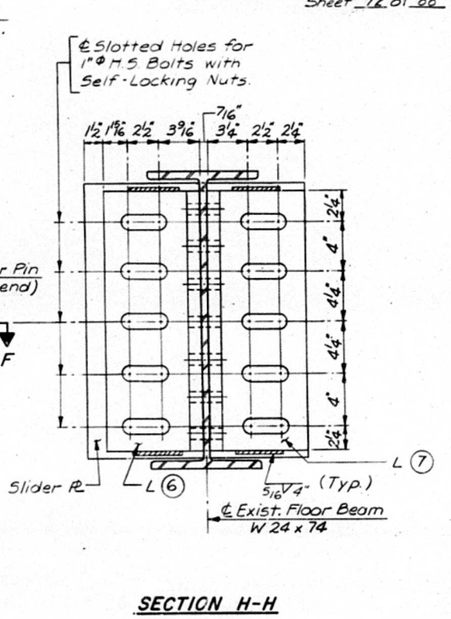


ELEVATION

FLOOR BEAM SPLICE TYPE B



SECTION G-G



SECTION H-H

Notes:

The 3"Φ pin and angles 1 & 4 of floor beam splice type A shall be installed to the floor beams before removing from the shop.

No field welding shall be allowed for floor beam splices.

Note E: During the construction phase, the 1"Φ H.S. bolts of splice type A and the 1"Φ H.S. bolts of splice type B shall be installed with the locking nut just making contact with the part to be joined. The nuts should then be locked into this position. After all dead load has been placed, i.e. final dead load movement has taken place, the bolts are to be fully tightened and locked into position by the deck contractor.

L 2, L 3, L 6, & L 7 are to receive ½"x 3"x 6" plate washers over the slotted holes for the H.S. bolts. L 2 & L 6 should have the plate washers installed with the H.S. bolts. L 3 & L 7 cannot have the plate washers installed until all dead load is in place and final dead load movement has occurred. They should then be installed before final bolt tightening.

* Maintain ½" gap after all dead load has been placed.

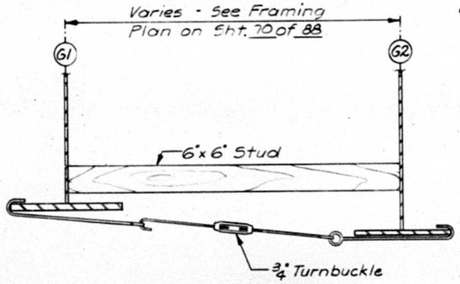
Note: 1 1/16"Φ holes in gusset PL's for 7/8"Φ H.S. Bolts.

Hardened washers shall be required over holes in gusset PL's.



SUGGESTED TEMPORARY GIRDER BRACING DETAIL

Temporary girder bracing shall be used during the construction of Span 9E. As shown in the suggested temporary girder bracing detail, the bottom flange of the girder shall be braced against both inward and outward movements. The temporary bracing shall be installed adjacent to all cross frames at ± 26 ft. intervals and spaced to miss all girder splices and transverse stiffeners. Note that the cross frames shall initially be installed only to girder 2. After all dead load has been placed, the holes in the bearing or transverse stiffeners of girder 1 will match those holes in the gusset plates of the cross frames. The cross frames should then be bolted to girder 1 by the deck contractor. The cost of the temporary girder bracing & installation shall be incidental to the cost of the F & E Contract. Cost of removal is the responsibility of the Deck Contractor & they will be his property.

The 7/8"Φ bolts and hardened washers used in connecting the cross frames to girder 1 shall be supplied by the deck contractor and are incidental to the cost of the Contract.

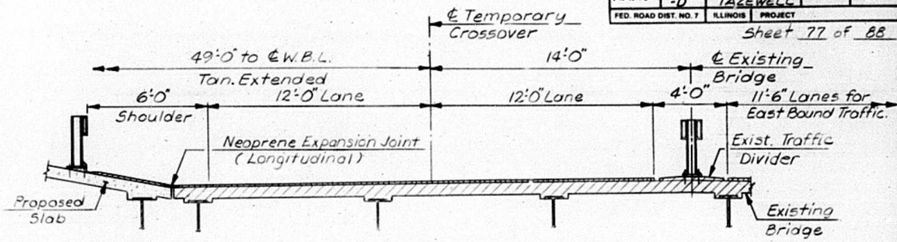
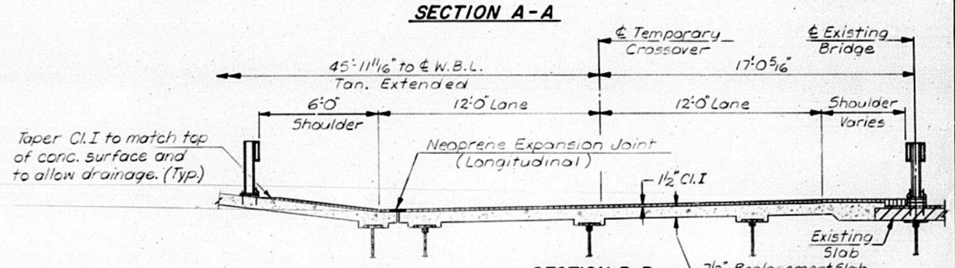
DETAIL A

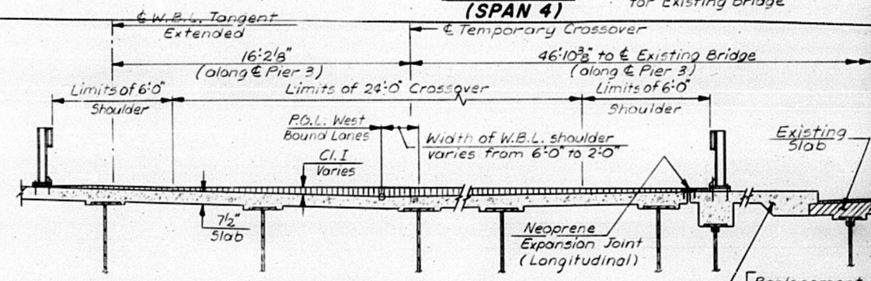
This modification will not be paid for separately. (Incidental in cost)



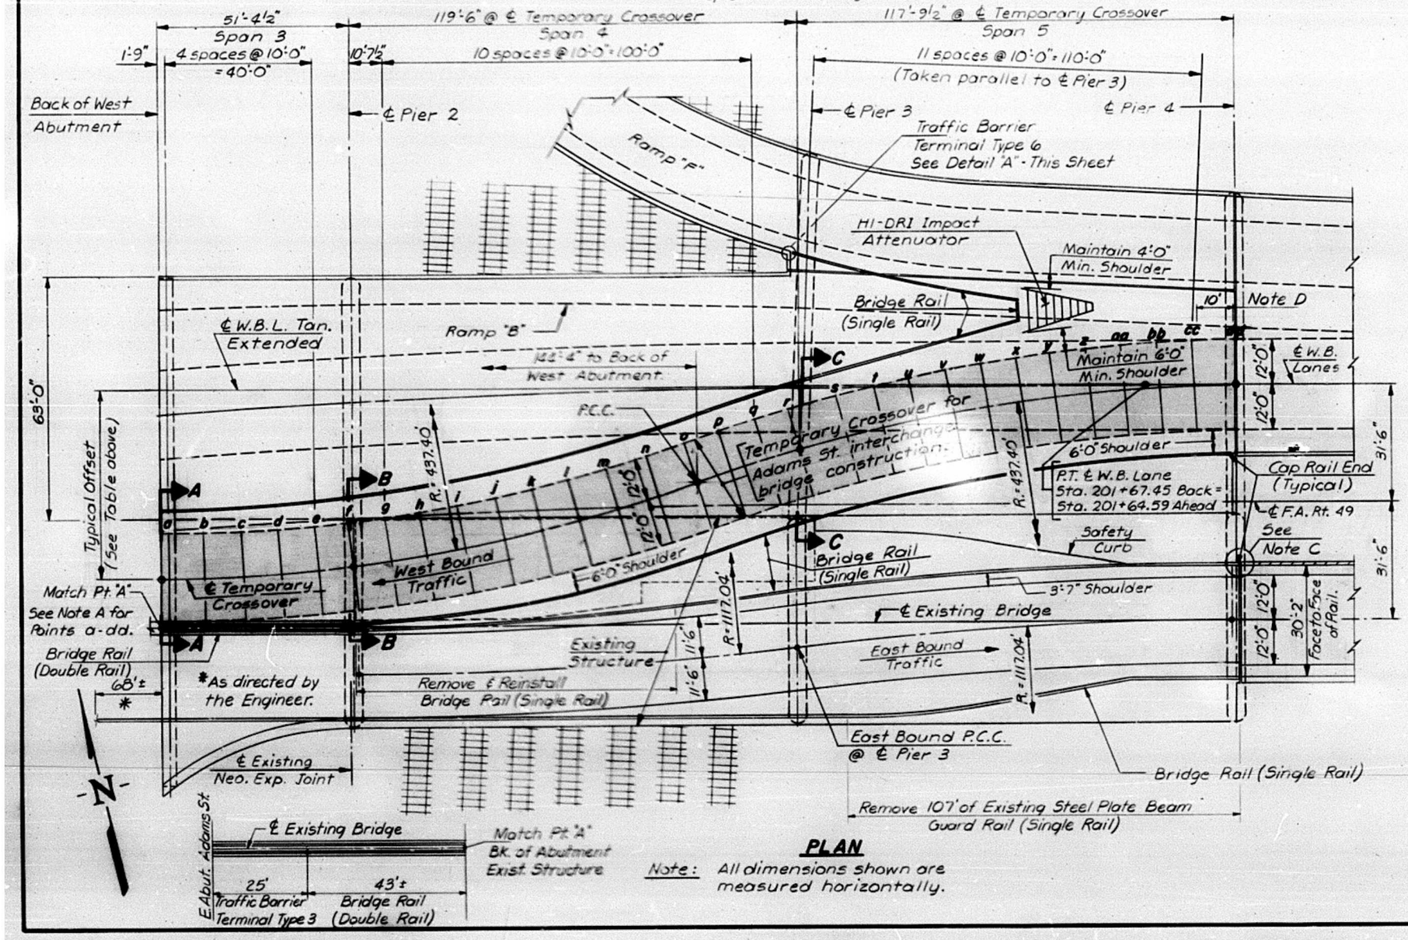
SECTION A-A



SECTION B-B (SPAN 4)



SECTION C-C



PLAN

Note: All dimensions shown are measured horizontally.

NOTES:

Note A: Points a thru dd can be located by intersecting the north edge of the 24'-0" temporary crossover with lines at the spacings shown in the plan view.

Note B: Elevations given along the south edge of the 24'-0" temporary crossover are taken at locations radial to the north edge of the crossover.

Note C: Face of Bridge Rail to match face of 4"x12" rectangular railing in Span 6. Note that the terminal for 4"x12" rectangular railing is to be removed and the end of the railing is to be capped. Cost of removing terminal & supplying cap will be incidental to cost of Bridge Rail.

See Sheet 78 of 88 for details of Impact Attenuator & Bridge Rail.

299' Existing Steel Plate Beam Guard Rail (from West Abut. to Pier 4) to be removed. (Paid for under S.P.B.G.R. Removal Single Rail)

Note D: Taper Cl. I - from 1 1/2" to match top surface of 6 1/2" neoprene expansion joint.

107' Existing Steel Plate Beam Guard Rail (South Curb of Span 5) to be removed. (Paid for under S.P.B.G.R. Removal Single Rail)

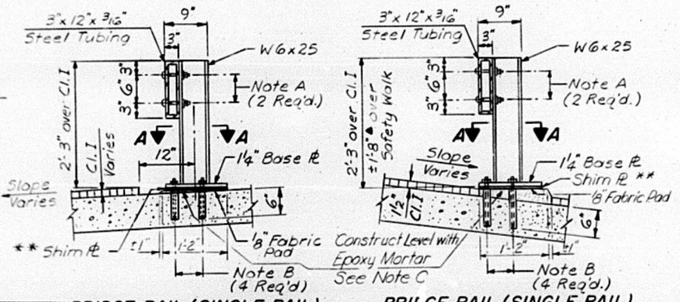
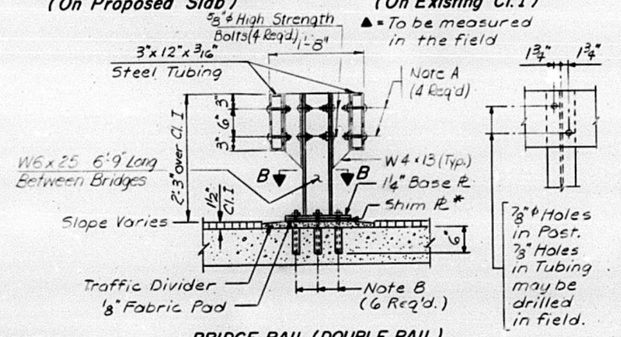
SECTION B-B



BRIDGE RAIL (SINGLE RAIL)
(On Proposed Slab)

BRIDGE RAIL (SINGLE RAIL)
(On Existing Cl. I)



BRIDGE RAIL (DOUBLE RAIL)

BRIDGE RAIL DETAILS

NOTES - BRIDGE RAIL

* Provide 2 - ⅛"x 13"x 1'-3½" Shim Plates for each Double Rail Post.

** Provide 2-⅛" x 13"x 13" shim plates for each Single Rail Post.

Note A: ¾" ϕ x 5" Button Hd. Machine Bolts (with slot or approved recess in head) with locknut & flat washer.

Note B: Drill & Epoxy Grout 1¼" ϕ holes for 1" ϕ H.S. bolts with nut & flat washers. See Spec. Prov.

The portion of the base plate or shim plate that contacts concrete shall recieve two coats of asphalt paint conforming to Section 714.08 Type B or place ⅛" fabric bearing pad between the post and concrete.

Hollow structural steel tubing shall conform to the requirements of A.S.T.M. designation A-500 Grade B Structural Steel Tubing.

All other steel shapes and plates shall conform to the requirements of AASHTO. M-183 except posts and angles shall conform to AASHTO. M-223 Grade 50.

Bolts, cap screws and nuts shall conform to the requirements of A.S.T.M. designation A-307 except for high strength bolts, nuts and washers noted which shall conform to AASHTO. M-164.

All bolts, nuts, cap screws, washers and lock washers shall be galvanized in accordance with AASHTO. M-232.

All posts, railing, rail splices, anchor devices and angles shall be galvanized after shop fabrication in accordance with AASHTO. M-111 and A.S.T.M. A-385. Galvanized rail shall not be painted.

Railing shall be in accordance with Section 508 of the Standard Specifications, except as noted, and shall be paid for at the contract unit price per linear foot for furnishing and erecting Bridge Rail. All shim plates, paste, blockouts and mounting hardware shall be included in the price per linear foot of Bridge Rail.

All field drilled holes shall be coated with an approved zinc rich paint before erection.

Maximum rail post spacing shall be 6'-9"

Note C: Remove wearing surface and sandblast the concrete surface clean & free of sealant, loose or unsound concrete and contaminents. The seats shall then be built up with Epoxy Mortar to the dimensions shown. The epoxy mortar shall consist of a 100 percent solids (solvent-free), two-component, fast curing, epoxy-resin system, suitably mixed with a clean, oven-dried aggregate of the type and gradation recommended by the manufacturer of the epoxy. The epoxy mortar shall be mixed, placed, and cured in accordance with the manufacturer's instructions. It shall be capable of bonding to concrete surfaces, provide compressive strength of 6000 psi when fully cured, and recommended by the manufacturer for the use intended. (Cost Incidental)

NOTES:

All cast iron parts shall be gray iron conforming to the requirements of AASHTO M 105, Class 30.

Bolts, washers and nuts shall conform to the requirements of ASTM A-307.

All bolts, washers and nuts shall be galvanized in accordance with AASHTO M 232.

The waterproofing membrane system shall be installed such that the membrane covers the frame flanges and extends down into the frame with the grates placed on top of the membrane.

Cost of the Main Grate, Cleanout Grate, Frame, Downspout, Bolts, Washers and Nuts including complete installation of Scupper shall be paid for at the unit bid price for "DRAINAGE SCUPPERS."

The Contractor may use at his option steel frames and steel grates or cast frames and cast grates, but will not be allowed to use steel grates with cast frames nor cast grates with steel frames.
