Dear Mr. Fortmann:

Attached is the final preliminary site investigation (PSI) report for contract 60Y39 of the above referenced work order. Ecology and Environment, Inc., (E & E) has revised the draft PSI report based on IDOT's comment letter dated April 29, 2016, and on telephone correspondence between E & E and IDOT on May 3, 2016. If you have any questions regarding this submittal, please contact me at (312) 578-9243.

Sincerely,
Ecology and Environment, Inc.

VOCs	volatile organic compounds
WB	westbound

1

Introduction

This preliminary site investigation (PSI) report was prepared for the Illinois Department of Transportation (IDOT) pursuant to work order 05A issued to Ecology and Environment, Inc., (E & E) under the IDOT Work Order Agreement for Consultant Services, PTB No. 176-001— Various Waste Assessments, Various Routes, Various Counties, Region One, District One. E & E was tasked by IDOT to conduct the PSI for proposed construction within existing IDOT right-of-way (ROW) along Interstate 90 (I-90) in Chicago, Harwood Heights, and Norwood Park in Cook County, Illinois.

This report addresses proposed construction activities to be conducted along westbound (WB) I-90 from Interstate 190 (I-190) to Harlem Avenue under contract number 60Y39. Construction activities along eastbound (EB) I-90 were addressed in a separate report.

Field investigation activities were conducted by E & E in February 2016. The objectives of the investigation as defined in the IDOT-approved work plan dated January 11, 2016 (E & E 2016) are as follows:

- Determine the magnitude and the lateral and vertical extent of potential soil contamination within existing IDOT ROW in the proposed construction area. The impact of possible contamination on the uppermost groundwater unit will also be evaluated if groundwater is encountered within the proposed construction zone during the investigation.
- Prepare a site investigation report with findings, conclusions, and recommendations as well as a remediation scope of work, based upon the results of chemical analysis of soil and groundwater samples. The remediation scope of work will include an estimate of the quantity of contaminated soil excavation quantities and an associated estimated cost for remediation. If groundwater has been affected and sufficient data on the extent and source of contamination is available, remedial alternatives will be provided to implement cleanup.
- Assess the potential for surrounding IDOT property within the project area to be affected by contaminants migrating from the affected areas, and present recommendations for the mitigation of contaminant migration when the potential for migration is determined to be high.

This report presents the findings of E & E's investigation and consists of six sections. Section 2 provides pertinent site background information. Section 3 describes the procedures and sampling rationale used during the field investigation. Section 4 summarizes E & E's field investigation results, including observations, field measurements, sampling rationale, analytical results, and comparisons of the analytical results with regulatory standards. Section 5 provides conclusions of the investigation and recommendations for further investigation and contaminant migration reduction techniques, if necessary. Section 6 lists the references cited in this report.

2

Site Background

IDOT construction plans provided to E & E indicate that soil excavation is anticipated for this project to provide an additional travel lane on the existing I-90 alignment, ramp modifications at Cumberland Avenue, and barrier separation between eastbound I-90 and I-190. Improvements include resurfacing and widening, retaining walls, ramps, storm sewer, ditches/swales, noise walls, Intelligent Transportation Systems (ITS)/communication conduit/cable, high mast lighting foundations, sign structures, grading of detention basin, slip ramps, collector/distributor (CD) road and roadway ramps. Excavations associated with the improvements are estimated to extend to a maximum depth of 30 feet below ground surface (bgs). The project construction plans provided to E & E indicate that ROW acquisition is not proposed for this project.

The Illinois State Geological Survey (ISGS) conducted a Preliminary Environmental Site Assessment (PESA) of the project area to identify sites with recognized environmental conditions (RECs) that may potentially affect the project. Table 2-1 presents the sites identified by ISGS, along with the identified RECs and the proposed IDOT construction activities at each site. Applicable background information about the sites, taken directly from ISGS PESA report number 2746, is included as Appendix A. The site investigation area is shown in Figure 2-1.

Field Investigation Procedures

E & E followed a project-specific investigative work plan (E & E 2016) in accordance with IDOT-approved standard operating procedures (SOPs) to achieve the objectives stated in Section 1 for the project area. The field investigation for this project included screening and sampling of soil and sampling groundwater at the sites identified in Section 2. This section describes the procedures used for screening, sample collection, equipment decontamination, quality assurance, and sample custody.

3.1 Soil Boring and Sampling Procedures

E & E advanced 66 borings in the proposed construction area. E & E's truck-mounted Geoprobe[®] was used to advance 63 of the borings and a stainless steel hand auger was used to advance 3 borings. A summary of the sampling and analysis program for this PSI is presented in Table 3-1, and boring locations are shown on Figures 3-1 through 3-8. All borings were advanced to their proposed depths, with the following exceptions:

- Boring 2746-01-B46 was completed at a depth of 10 feet, instead of the proposed depth of 11 feet, due to borehole cave-in.
- Boring 2746-01-B53 was completed at a depth of seven feet, instead of the proposed depth of 12 feet, due to geoprobe refusal. Consequently, only one soil sample was collected at this boring instead of the two samples as proposed in the work plan.
- Boring 2746-01B-B02 was completed at a depth of three feet, instead of the proposed depth of 10 feet, due to geoprobe refusal. Consequently, only one soil sample was collected at this boring instead of the two samples as proposed in the work plan.
- Boring 2746-01-B24 was completed at 14 feet, as proposed in the work plan; however, only one soil sample was collected from this boring because E & E encountered groundwater at a depth of 5 feet bgs.

Individual boring locations are identified with a unique alpha-numeric identification code. The first part of the boring identification is the site number designated by ISGS in the PESA (e.g., 2746-01 for ISGS site #2746-1 [IDOT ROW]). Following the ISGS site number is the boring identification number. Borings are

numbered sequentially, with the initial boring at each site designated -B01 (e.g., for ISGS site #2746-1, the initial boring is designated 2746-01 -B01).

Before advancing the borings, E & E personnel marked the proposed boring locations at the site and completed utility clearance. All of the borings were advanced within 10 feet of their proposed locations unless otherwise noted in Table 3-1. E & E used a global positioning system (GPS) receiver to record the actual location of each boring upon its completion.

E & E's Geoprobe[®] was equipped with a 4-foot-long, 2-inch diameter Macro-Core sampler. At locations sampled by the Geoprobe[®], soil cores were collected from each boring by hydraulically pushing the Macro-Core in 4-foot increments. E & E used a new PVC Macro-Core liner for each sample interval and decontaminated the Macro-Core sampler with an Alconox[®] and potable water solution between borings. A stainless steel hand auger was used to advance borings inaccessible with the Geoprobe[®]. The hand auger was decontaminated between boring locations using an Alconox[®] and water solution.

E & E used a calibrated photoionization detector (PID) to conduct headspace screening for volatile organic compounds (VOCs) on an aliquot of soil from each core in 2-foot intervals. The depth interval, recovery, soil description, headspace screening results, and any observations of staining and/or odors indicative of contamination were recorded for each Macro-Core sample. Boring logs for this project are presented in Appendix B.

E & E collected 128 soil samples from the project area for laboratory analysis, including six duplicate samples. E & E relinquished the samples to TestAmerica Laboratories of University Park, Illinois (National Environmental Laboratory Accreditation Program [NELAP] number 100201). Sample identification, documentation, and chain-of-custody were conducted in accordance with the approved SOPs during collection, transportation, storage, and analysis of samples.

3.2 Groundwater Sampling Procedures

E & E encountered groundwater in a sufficient volume to collect a sample in boring 2746-01-B03 at ISGS site #2746-1 (IDOT ROW). In accordance with the work plan, E & E installed a temporary groundwater sampling device and collected a groundwater sample for laboratory analysis.

The temporary groundwater sampling device consisted of a 3.6-foot long, 1-inch outside diameter wire-wound stainless steel screen having a slot width of 0.004 inch. This temporary well screen was telescoped into an outer sheath tipped by an expendable point, then lowered to a point below the static water level in the open borehole using 1.25-inch diameter probe rods. After the sheathed screen was lowered to the target depth, the expendable point was deployed and the sheath was retracted to expose the well screen. Polyethylene tubing was then placed inside the probe rods from the surface and lowered to the well screen to provide

3 Field Investigation Procedures

access to groundwater. Groundwater was pumped to the surface using a peristaltic pump, collected in laboratory-grade sample bottles, packaged, and submitted to the laboratory according to E & E SOPs. The device was removed from the probe hole, and the open hole was filled with soil cuttings and granular bentonite at the completion of sample collection activities.

Notes:

^a Offsets are shown for borings moved a distance of 10 feet or greater from the proposed location.

^b All of the samples were analyzed for pH and percent solids.

^c Boring terminated at depth due to refusal and only one soil sample collected from the boring.

^d Boring terminated at depth due to cave-in.

^e Boring advanced with stainless steel hand auger or trowel.

^f Only one soil sample collected due to the presence of groundwater.

Key:

ISGS = Illinois State Geological Survey.

SPLP = Synthetic precipitation leaching procedure.

SVOCs = Semivolatile organic compounds.

TAL = Target Analyte List.

TCLP = Toxicity characteristic leaching procedure.

VOCs = Volatile organic compounds.

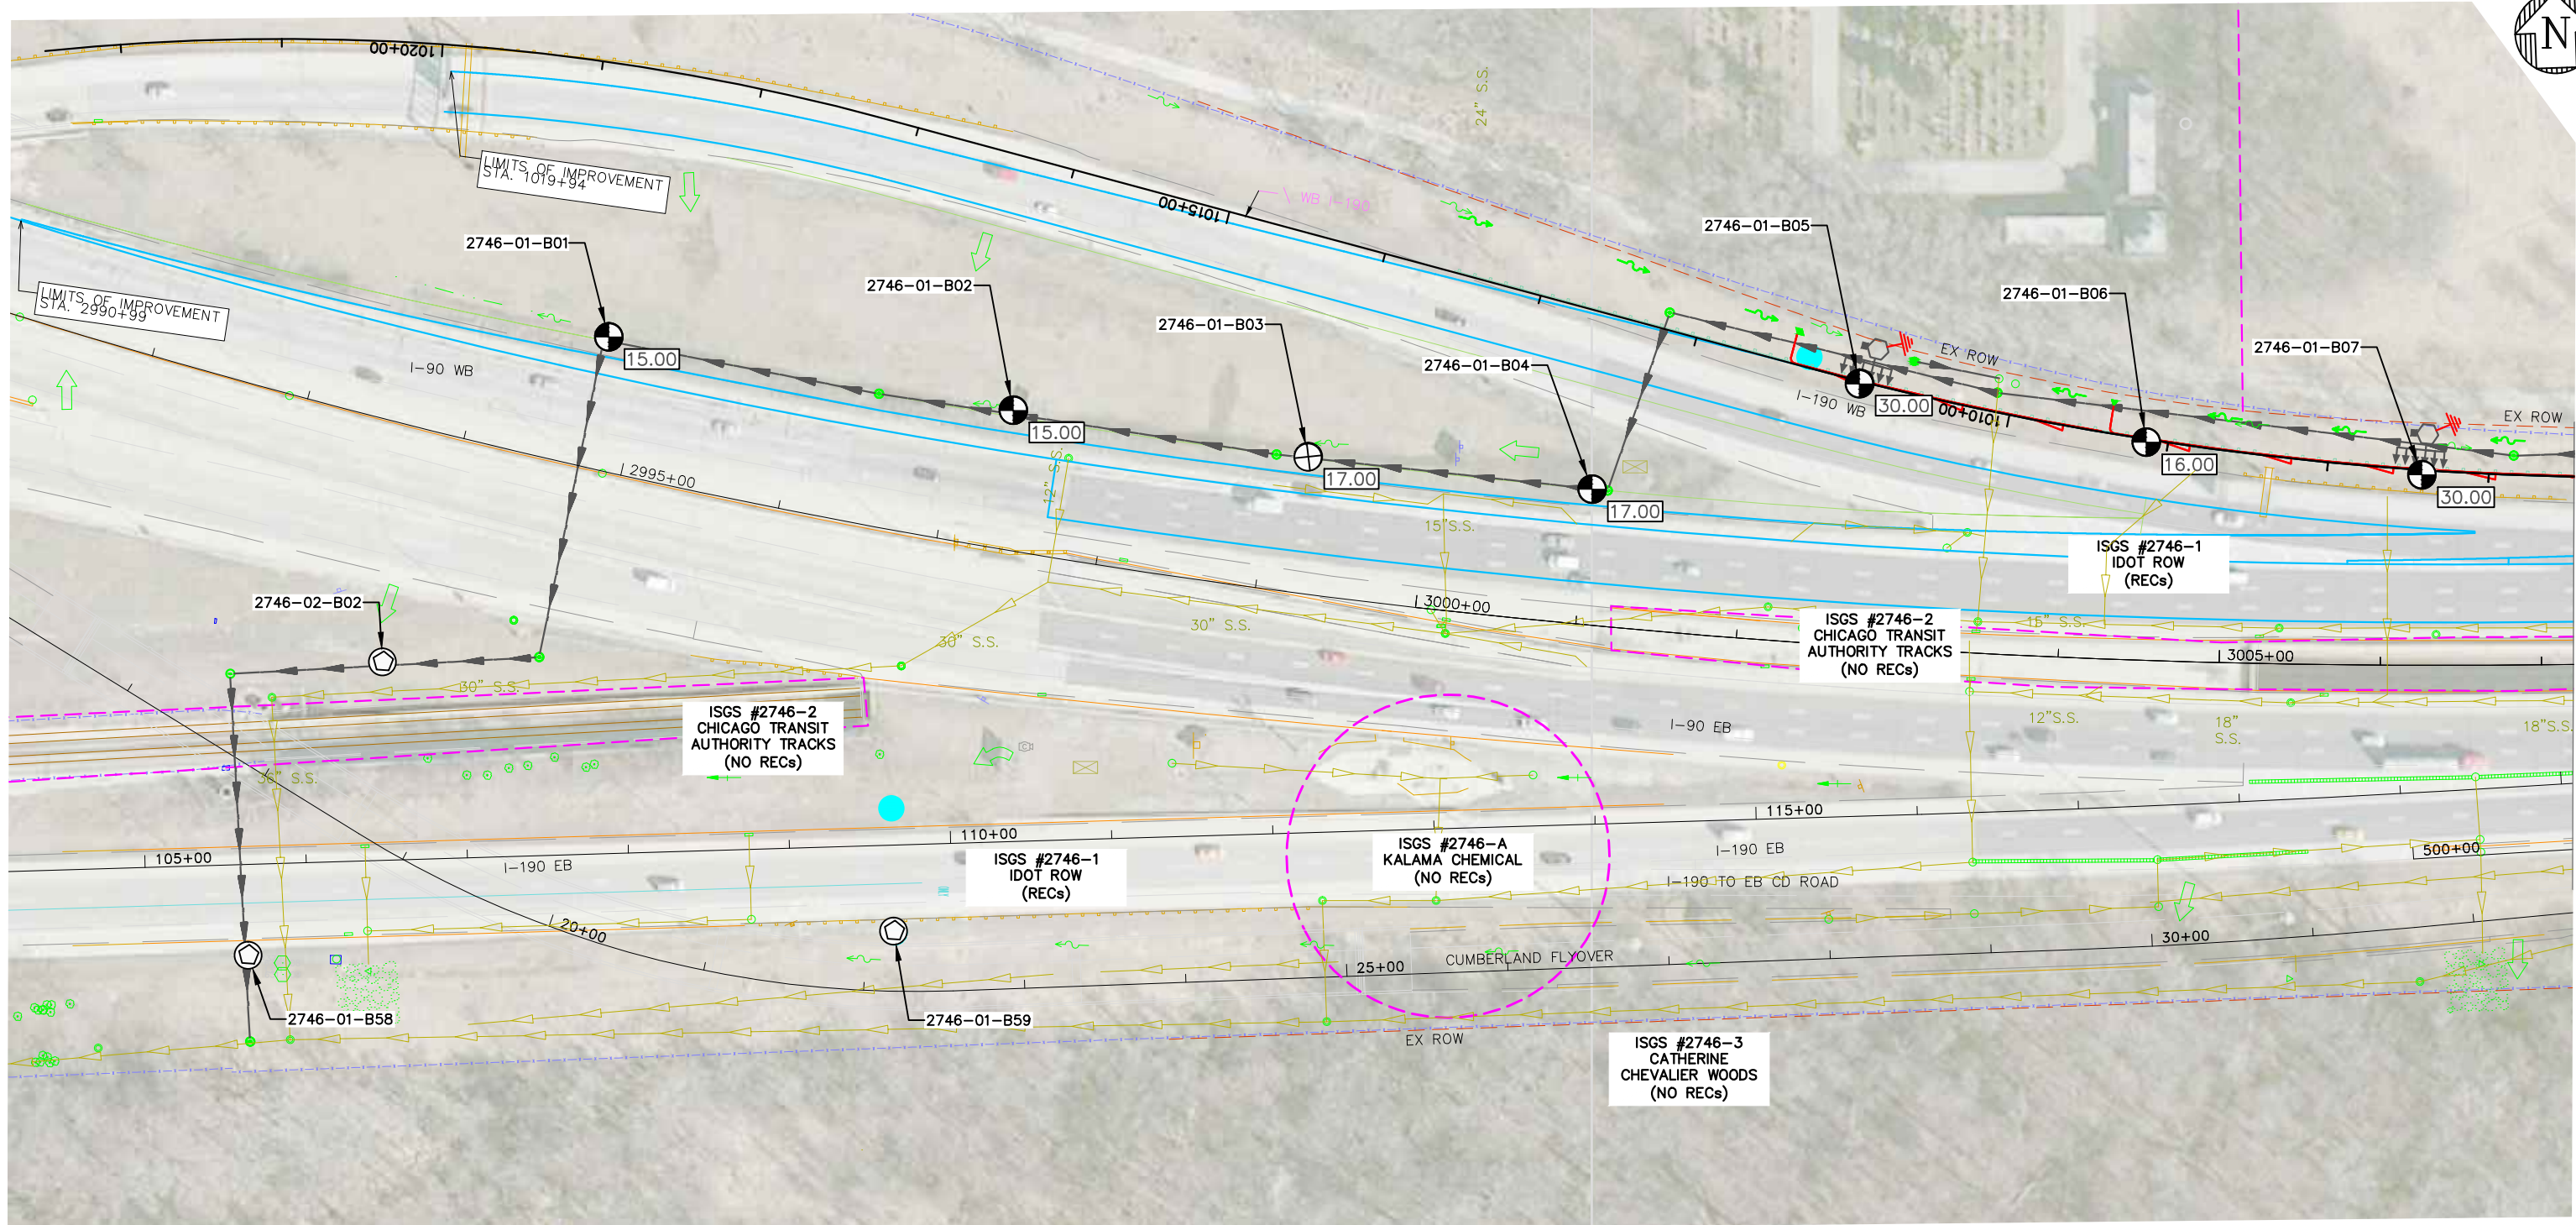

Analysis Methods:

VOCs: SW8260B.

SVOCs: SW8270C.

Total Metals: SW6010B/SW7470A/SW7471A.

TCLP/SPLP Metals: SW6010B/SW7041/SW7470A/SW7841.

Field Investigation Results

This section presents the results of E & E's field investigation and includes a discussion of project area geology and topography, significant field observations, sampling rationale, and laboratory analytical results relative to applicable criteria.

E & E's field observations and sample selection rationale are summarized by site and boring in Table 4-1. Soil samples collected for laboratory analysis were analyzed for VOCs, semi-volatile organic compounds (SVOCs), and total and toxicity characteristic leaching procedure (TCLP) metals listed in 35 Illinois Administrative Code (IAC) 1100, Subpart F. Selected samples were analyzed for individual metals by synthetic precipitation leaching procedure (SPLP) analysis, based on TCLP analysis results, as discussed below. Groundwater samples collected for laboratory analysis were analyzed for VOCs, SVOCs, and total metals.

Laboratory results were reviewed by E & E for field and laboratory precision, accuracy, and completeness in accordance with procedures and quality control (QC) limits. The maximum detected concentrations of analytes in soil and a comparison with applicable reference concentrations are presented by site in Table 4-2. The maximum detected concentrations of analytes in groundwater are presented and compared with applicable reference concentrations in Table 4-3. Analytes detected at concentrations above applicable reference concentrations are considered contaminants of concern (COCs). A discussion of the analytical results is presented below, and a summary of detected analytes is presented in Appendix C. Laboratory data packages, including E & E's data review, are included as Appendix D.

The detected analyte concentrations in soil are compared with the Maximum Allowable Concentrations of Chemical Constituents in Uncontaminated Soil Used as Fill Material at Regulated Fill Operations (MACs) presented in 35 IAC 1100, Subpart F. When the MAC for an inorganic analyte is based on the Tiered Approach to Corrective Action Objectives (TACO) Class I soil component of the groundwater ingestion exposure route (SCGIER) presented in 35 IAC 742, Appendix B, Table C, the total concentration for the analyte is compared with the MAC, and the results of TCLP and SPLP analyses are independently compared with the TACO Class I SCGIER for the analyte found in 35 IAC 742, Appendix B, Table A. The analyte is considered to exceed the MAC if the total, TCLP, and SPLP results all exceed the applicable reference concentrations.

When the MAC for a constituent is location-specific, the detected constituent concentration is also compared with the MAC for a metropolitan statistical area (MSA) and/or the MAC for Chicago corporate limits. Location-specific MACs have been established for arsenic, iron, manganese, benzo(a)anthracene, benzo(a)pyrene, benzo(b)fluoranthene, dibenzo(a,h)anthracene, and indeno(1,2,3-cd)pyrene. Analytes detected at concentrations above applicable reference criteria in project area soil are considered COCs and are presented in Table 4-4.

E & E also evaluated sample pH levels and the results of PID headspace screening pursuant to 35 IAC 1100.201(g) and 205(b)(1), respectively. Soil pH must be between 6.25 and 9.0 standard units (SU) in order for the soil to be accepted at a clean construction or demolition debris (CCDD) facility or an uncontaminated soil fill operation (USFO). In addition, loads of soil exhibiting PID readings above background cannot be accepted by a CCDD facility or USFO.

Aggregate volumes of impacted soil are estimated without regard for property boundaries or planned excavation activities and are presented in Table 4-5. The following general assumptions were used to estimate impacted soil volumes for applicable COCs:

- Affected volumes can be estimated using simple geometric shapes.
- For VOCs, the vertical extent of contamination is assumed to include the interval where the exceedance was detected and contiguous intervals that exhibit a headspace VOC reading above background. Other evidence of contamination such as staining and odor is also taken into consideration.
- When only one sample is collected in a boring, the vertical extent of contamination for SVOCs and inorganic analytes is assumed to extend from the ground surface through the depth interval where the exceedance was observed to the maximum depth of the boring. If multiple samples were collected in a boring, the vertical extent of contamination will be determined based on the sample intervals exhibiting results above MACs or the top of the deepest soil interval demonstrating no MAC exceedances, along with observations of staining, odors, or fill containing material such as slag or cinders that may be a potential source of the detected COCs.
- The horizontal extent of impacted soil at an individual boring is represented by a rectangle centered on the boring and extending from the roadway centerline to the construction limit. The rectangle will extend laterally one-half the distance between the affected boring and the next adjacent boring that does not contain the compound or analyte above applicable criteria. If no adjacent borings are present, the rectangle will extend laterally 50 feet in each direction.

When one or more COCs are detected in a boring, the impacted soil excavation quantities for construction are estimated based on the assumption that the

impacted soil extends from the ground surface to the proposed excavation depth for the construction feature within the aggregate area.

E & E's field investigation was designed to provide an initial characterization of site conditions at pre-designated boring locations. The investigation was limited in terms of analytical parameters and the number of samples collected, based on the site information presented in ISGS PESA #2746. Consequently, the findings and conclusions of this investigation are subject to revision if more site data become available.

4.1 Project Area Geology and Topography

E & E advanced 66 soil borings for this project to depths ranging from approximately 2 to 30 feet bgs. Observations of subsurface materials in the project area are described for each of the soil borings in Appendix B. The following information was provided by ISGS PESA #2746:

The topmost bedrock unit in the project area has been mapped as undifferentiated rocks of Silurian age, which in this area consist primarily of limestones and dolomites.

The total thickness of surficial deposits is 15-30 meters (50-100 feet) in the western project area and 30-60 meters (100-200 feet) in the eastern project area. In the west project area, the uppermost formation is the Peoria and Roxana Silt of the Mason Group, which is a discontinuous layer of silt that is less than 6 meters (20 feet) thick. Beneath the Peoria and Roxana Silt is the Henry Formation of the Mason Group, which is less than 6 meters (20 feet) thick and consists of stratified silt and gravel. Beneath the Henry Formation is the Wedron Group, which is greater than 15 meters (20 feet) thick and described as silty and clayey glacial material. In the east project area, the uppermost formation is the Wedron Group, which is greater than 6 meters (20 feet) thick and described as silty and clayey glacial material. Along the project ROW, the Natural Resources Conservation Service (NRCS) has classified the Milford silty clay loam, 0-2% slopes, as hydric. The NRCS has classified the Urban land; the Urban land-Orthents, clayey, complex, nearly level; the Orthents, clayey, undulating; the Urban land-Alfic Udarents, clayey, complex, 0-2% slopes; and the Alfic Udarents, clayey-Urban land-Elliott complex, 0-2% slopes, as non-prime farmland

Surficial drainage in the project area is generally toward the west, in the direction of the Des Plaines River. However, since the project area is urbanized and storm drains and sewers are present, most surficial runoff will be controlled by the storm sewer system; such systems typically are designed to follow natural drainage patterns. Neither the near-surface nor the shallow unconfined groundwater flow direction was specifically determined for this project, but they generally mimic local topography.

E & E observed fill material (i.e., silt/sand/gravel/clay mixtures, topsoil, asphalt, and concrete) in most of the borings advanced during this investigation. Native material (i.e., undisturbed soil) was also observed in most of the borings, and consisted of stiff, brown and gray, silty clay and clay with variable amounts of gravel. Sand and gravel, sand, and silty sands were encountered between fill material and native clays in the western portion of the project area. Groundwater was encountered in three borings (2746-01-B01, 2746-01-B03, and 2746-01-B24) advanced during E & E's investigation. At borings 2746-01-B01 and 2746-01-B03, groundwater was encountered in a sand and gravel unit at depths of 10 feet and nine feet bgs, respectively. This perched zone did not produce a sufficient volume to sample at boring 2746-01-B01, but a sufficient sampling volume was obtained at boring 2746-01-B03. Groundwater was encountered at boring 2746-01-B24 in a sand unit at a depth of five feet bgs. Bedrock was not encountered in any of the borings.

4.2 ISGS #2746-1 (IDOT ROW)

4.2.1 Field Observations at ISGS #2746-1

E & E advanced 57 borings (2746-01-B01 through 2746-01-B57) at #2746-1 (IDOT ROW) (see Table 4-1 and Figures 4-1 through 4-8A). VOCs were not detected during headspace screening of site soils, and the soils did not exhibit discoloration or odors indicative of potential chemical contamination. E & E collected a total of 116 soil samples at the site. The number of samples collected per boring is presented in Table 4-1. Duplicate samples were collected from borings 2746-01-B07, 2746-01-B18, 2746-01-B26, 2746-01-B49, and 2746-01-B54. One groundwater sample (2746-01-G03) was collected at boring 2746-01-B03.

4.2.2 Analytical Results for ISGS #2746-1

4.2.2.1 Soil

Four VOCs (2-butanone, acetone, tetrachloroethene, and trichloroethene) were detected in the samples from this site (see Table 4-2). Chlorinated VOCs tetrachloroethene (PCE) and trichloroethene (TCE) were detected in sample 2746-01-B23 (0-2); PCE was also detected in sample 2746-01-B25 (0-7). The chlorinated VOCs were not detected in any of the other site samples.

Twenty-two SVOCs, primarily PAHs, were detected in the site samples. Twenty-three metals were detected in the site samples, and 10 of the metals were detected by TCLP analysis. Based on the TCLP metals results, 115 of the samples were analyzed for SPLP manganese; 14 of the samples were analyzed for SPLP lead; two of the samples were analyzed for SPLP cadmium; and one sample each was analyzed for SPLP zinc, and SPLP boron. Boron, lead, manganese, and zinc were detected by SPLP analysis. SPLP manganese was detected in 114 of the 115 samples analyzed. Lead was detected in 12 samples by SPLP analysis. The sample pH levels ranged from 6.78 to 9.17 SU.

4.2.2.2 Groundwater

Analysis of the groundwater sample revealed the presence of bis(2-ethylhexyl)-phthalate and 18 metals (see Table 4-3 for analytes detected in groundwater). VOCs were not detected in the groundwater sample.

4.2.3 Nature and Extent of Contamination above Applicable Criteria at ISGS #2746-1

4.2.3.1 Soil

Benzo(a)anthracene, benzo(a)pyrene, benzo(b)fluoranthene, carbazole, dibenzo(a,h)anthracene, indeno(1,2,3-cd)pyrene, arsenic, lead, manganese were detected above reference concentrations in soil at the site. A complete list of COCs is presented by boring in Table 4-4.

Eight borings contained one or more COCs at concentrations above all applicable reference criteria. The borings with COCs that exceeded all applicable criteria are as follows:

- 2746-01-B01 (manganese)
- 2746-01-B04 (lead)
- 2746-01-B10 (copper and lead)
- 2746-01-B16 (benzo(a)anthracene and benzo(b)fluoranthene)
- 2746-01-B23 (benzo(a)anthracene, benzo(a)pyrene, benzo(b)fluoranthene, carbazole, dibenzo(a,h)anthracene, and indeno(1,2,3-cd)pyrene)
- 2746-01-B35 (arsenic)
- 2746-01-B44 (lead), and
- 2746-01-B56 (lead)

The copper concentration detected at boring 2746-01-B10, benzo(a)anthracene and benzo(b)fluoranthene concentrations detected in boring 2746-01-B16, PAH concentrations detected in boring 2746-01-B23, arsenic in boring 2746-01-B35, and lead in borings 2746-01-B44 and 2746-01-B56 also exceeded the respective TACO Tier 1 soil remediation objectives (ROs) for residential properties.

Thirty-three borings contained one or more COCs at concentrations above the most stringent reference criteria, but below MSA and Chicago MACs, and/or TCLP/SPLP metals concentrations that exceed the TACO Tier 1 ROs for the SCGIER without corresponding exceedances of the total metals concentrations. The borings and COCs meeting those criteria are as follows:

- 2746-01-B02 (TCLP/SPLP manganese)
- 2746-01-B03 (benzo(a)pyrene and TCLP/SPLP manganese)
- 2746-01-B05 (TCLP/SPLP manganese)
- 2746-01-B07 (TCLP/SPLP lead and TCLP/SPLP manganese)

- 2746-01-B08 (TCLP/SPLP manganese)
- 2746-01-B09 (TCLP/SPLP lead and TCLP/SPLP manganese)
- 2746-01-B11 (TCLP/SPLP manganese)
- 2746-01-B12 (TCLP/SPLP manganese)
- 2746-01-B13 (TCLP/SPLP manganese)
- 2746-01-B14 (benzo(a)anthracene, benzo(a)pyrene, benzo(b)fluoranthene, dibenzo(a,h)anthracene, TCLP/SPLP manganese)
- 2746-01-B15 (TCLP/SPLP manganese)
- 2746-01-B18 (TCLP/SPLP manganese)
- 2746-01-B19 (TCLP/SPLP manganese)
- 2746-01-B20 (TCLP/SPLP manganese)
- 2746-01-B22 (Benzo(a)pyrene and TCLP/SPLP manganese)
- 2746-01-B24 (TCLP/SPLP lead and TCLP/SPLP manganese)
- 2746-01-B25 (Benzo(a)pyrene and TCLP/SPLP manganese)
- 2746-01-B26 (TCLP/SPLP lead and TCLP/SPLP manganese)
- 2746-01-B28 (TCLP/SPLP lead and TCLP/SPLP manganese)
- 2746-01-B29 (TCLP/SPLP manganese)
- 2746-01-B30 (TCLP/SPLP manganese)
- 2746-01-B31 (benzo(a)pyrene, TCLP/SPLP lead and TCLP/SPLP manganese)
- 2746-01-B32 (TCLP/SPLP manganese)
- 2746-01-B39 (TCLP/SPLP manganese)
- 2746-01-B40 (TCLP/SPLP lead and TCLP/SPLP manganese)
- 2746-01-B41 (TCLP/SPLP manganese)
- 2746-01-B43 (TCLP/SPLP manganese)
- 2746-01-B45 (TCLP/SPLP manganese)
- 2746-01-B49 (TCLP/SPLP manganese)
- 2746-01-B53 (TCLP/SPLP manganese)
- 2746-01-B54 (TCLP/SPLP manganese)
- 2746-01-B55 (TCLP/SPLP lead), and
- 2746-01-B57 (TCLP/SPLP manganese).

Sixteen of the site borings did not contain COCs at concentrations above applicable criteria. Organic analytes detected in the borings were below the most stringent MACs and metals did not exceed MACs and/or TACO Tier 1 ROs for the SCGIER (by both TCLP and SPLP analysis), where applicable. Those borings are as follows.

- 2746-01-B06

- 2746-01-B17
- 2746-01-B21
- 2746-01-B27
- 2746-01-B33
- 2746-01-B34
- 2746-01-B36
- 2746-01-B37
- 2746-01-B38
- 2746-01-B42
- 2746-01-B46
- 2746-01-B47
- 2746-01-B48
- 2746-01-B50
- 2746-01-B51, and
- 2746-01-B52.

VOCs were not detected during headspace screening of site soil. The pH levels for samples 2746-01-B14 (0-8), 2746-01-B16 (0-8), and 2746-01-B17 (0-8) exceeded the acceptable range for management of the soil at a CCDD facility or USFO. The pH levels for the remaining samples were within the acceptable range for management of the soil at a CCDD facility or USFO.

4.2.3.2 Groundwater

Manganese and iron were detected above TACO Tier 1 ROs in groundwater sample 2746-01-G03. The detected manganese concentration exceeded the Tier 1 RO for Class 1 groundwater, and the detected iron concentration exceeded the Tier 1 ROs for Class 1 and Class 2 groundwater (see Table 4-3).

4.2.4 IDOT Construction Activities at ISGS #2746-1

4.2.4.1 Soil

Planned construction activities at this site include roadway resurfacing and widening; storm sewer installation; high mast, sign structure, and installation of camera TV foundations; a noise barrier; and a retention wall (see Figures 4-1 through 4-8B). Excavations associated with the improvements are estimated to extend to a maximum depth of 30 feet bgs.

The assumed areas of impact and COCs are depicted on Figures 4-1 through 4-8B. Table 4-6 presents the total volume of soil anticipated for excavation at the site along with an estimated volume of impacted soil within the proposed construction excavation area that will require proper handling and disposal if removed from the site.

4.2.4.2 Groundwater

Groundwater was encountered at a depth of nine feet bgs in boring 2746-01-B03. Excavation in the vicinity of the boring is proposed to an approximate depth of 17 feet bgs for storm sewer installation; consequently, it is anticipated that groundwater will be encountered during construction at the site. Table 4-7 presents an estimated volume of groundwater that is anticipated to be encountered during excavation in the vicinity of boring 2746-01-B03.

4.3 ISGS #2746-1a (IDOT ROW – Interchange of I-90 and Cumberland Ave.)

4.3.1 Field Observations at ISGS #2746-1a

E & E advanced five borings (2746-01A-B01 through 2746-01A-B05) at ISGS #2746-1a (IDOT ROW – Interchange of I-90 and Cumberland Ave.) (see Table 4-1 and Figure 4-4A). VOCs were not detected during headspace screening of site soils, and the soils did not exhibit discoloration or odors indicative of potential chemical contamination. E & E collected one sample from each boring for laboratory analysis. One groundwater sample was proposed for collection at the site; however, groundwater was not encountered in any of the borings.

4.3.2 Analytical Results for ISGS #2746-1a

Acetone was detected in sample 2746-01A-B03 (0-8) and was the only VOC detected in soil from this site (see Table 4-2). Seventeen SVOCs, all PAHs, were detected in the site samples. Twenty-one metals were detected in the site samples, and eight of the metals were detected by TCLP analysis. Based on the TCLP metals results, all of the samples were analyzed for SPLP manganese; and samples 2746-01A-B03 (0-8) and 2746-01A-B04 (0-8) were also analyzed for SPLP lead. SPLP manganese was detected in all of the samples, except for sample 2746-01A-B01. SPLP lead was detected in samples 2746-01A-B03 (0-8) and 2746-01A-B04 (0-8). The sample pH levels ranged from 7.52 to 8.89 SU.

4.3.3 Nature and Extent of Contamination above Applicable Criteria at ISGS #2746-1a

Benzo(a)pyrene, arsenic, lead, and manganese were detected above reference concentrations in soil at the site (see Table 4-4). The benzo(a)pyrene concentration detected in sample 2746-1A-B03 (0-8) exceeded the most stringent MAC, but was below the MSA and Chicago MACs. The total arsenic concentration detected in sample 2746-01A-B04 (0-8) exceeded the most stringent MAC, but was below the MSA MAC. Lead was detected by TCLP and SPLP analyses at concentrations above the TACO Tier 1 RO for the SCGIER in samples 2746-01A-B03 (0-8) and 2746-01A-B04 (0-8); however, the total lead concentrations detected in those samples were below the MAC. Manganese was detected by TCLP and SPLP analyses at concentrations above the TACO Tier 1 RO for the SCGIER in samples 2746-01A-B02 (0-8), 2746-01A-B03 (0-8), and 2746-01A-B04 (0-8); however, the total manganese concentrations detected in those samples were below the most stringent MAC.

No other COCs were identified at the site. Total iron was detected at concentrations above the MSA MAC in samples 2746-01A-B01 (0-8), 2746-01A-B04 (0-8), and 2746-01A-B05 (0-8), but iron was not detected in the samples by TCLP analysis. The total manganese concentration detected in sample 2746-01A-B01 (0-8) exceeded the MSA MAC and the TCLP manganese concentration exceeded the TACO Tier 1 RO for the SCGIER; however, manganese was not detected in the sample by SPLP analysis. TCLP manganese was detected in sample 2746-01A-B05 (0-8) at a concentration exceeding the TACO Tier 1 RO for the SCGIER; however, the total and SPLP manganese concentrations detected in the sample were below applicable reference concentrations.

VOCs were not detected during headspace screening of site soil. The pH levels for all of the samples were within the acceptable range for management of the soil at a CCDD facility or USFO.

4.3.4 IDOT Construction Activities at ISGS #2746-1a

4.3.4.1 Soil

Planned construction activities at this site include resurfacing and widening of the roadway and storm sewer installation (see Figure 4-4A). Excavations associated with the improvements are estimated to extend to a maximum depth of 8 feet bgs.

The assumed areas of impact and COCs are depicted on Figures 4-4A and 4-4B. Table 4-6 presents the total volume of soil anticipated for excavation at the site along with an estimated volume of impacted soil within the proposed construction excavation area that will require proper handling and disposal if removed from the site. Construction volumes were estimated using excavation quantities provided by IDOT.

4.4 ISGS #2746-1b (IDOT ROW – Intersection of I-90 and Canfield Ave.)

4.4.1 Field Observations at ISGS #2746-1b

E & E advanced two borings (2746-01B-B01 and 2746-01B-B02) at ISGS #2746-1b (IDOT ROW – Intersection of I-90 and Canfield Ave.) (see Table 4-1 and Figure 4-6A). VOCs were not detected during headspace screening of site soils, and the soils did not exhibit evidence of potential chemical contamination. E & E collected one sample from each boring for laboratory analysis. A duplicate sample was collected from boring 2746-01B-B01. One groundwater sample was proposed for collection at the site; however, groundwater was not encountered.

4.4.2 Analytical Results for ISGS #2746-1b

Acetone was detected in sample 2746-01B-B02 (0-3), and was the only VOC detected in site soil (see Table 4-2). Sixteen SVOCs, all PAHs, were detected in the site samples. Twenty-two metals were detected in the site samples, and five of the metals were detected by TCLP analysis. Based on the TCLP metals results, all of the samples were analyzed for SPLP manganese. SPLP manganese was

detected in the sample 2746-01B-B01 (0-8) and duplicate sample 2746-01B-B01 (0-8) D. The sample pH levels ranged from 8.41 to 11.0 SU.

4.4.3 Nature and Extent of Contamination above Applicable Criteria at ISGS #2746-1b

Benzo(a)pyrene, dibenzo(a,h)anthracene, and manganese were detected above reference concentrations in soil at the site (see Table 4-4). The benzo(a)pyrene and dibenzo(a,h)anthracene concentrations detected in sample 2746-01B-B02 (0-3) exceeded the most stringent MACs, but were below the MSA and Chicago MACs. Manganese was detected by TCLP and SPLP analyses at concentrations above the TACO Tier 1 RO for the SCGIER in samples 2746-01B-B01 (0-8) and 2746-01B-B01 (0-8) D; however, the total manganese concentrations detected in the samples were below the most stringent MAC.

No other COCs were identified at the site. Total iron was detected at concentrations above the MSA MAC in samples 2746-01B-B01 (0-8) and 2746-01B-B01 (0-8) D, but iron was not detected in the samples by TCLP analysis. TCLP manganese was detected in sample 2746-01B-B02 (0-3) at a concentration exceeding the TACO Tier 1 RO for the SCGIER; however, the total manganese concentration detected in the sample was below the most stringent MAC, and manganese was not detected in the sample by SPLP analysis.

VOCs were not detected during headspace screening of site soil. The pH for sample 2746-01B-B02 (0-3) exceeded the acceptable range for management of the soil at a CCDD facility or USFO. The pH levels for the samples from boring 2746-01B-B01 were within the acceptable range for management of the soil at a CCDD facility or USFO.

4.4.4 IDOT Construction Activities at ISGS #2746-1b

4.4.4.1 Soil

Planned construction activities at this site include resurfacing and widening of the roadway and storm sewer installation (see Figure 4-6A). Excavations associated with the improvements are estimated to extend to a maximum depth of 10 feet bgs.

The assumed areas of impact and COCs are depicted on Figures 4-6A and 4-6B. Table 4-6 presents the total volume of soil anticipated for excavation at the site along with an estimated volume of impacted soil within the proposed construction excavation area that will require proper handling and disposal if removed from the site. Construction volumes were estimated using excavation quantities provided by IDOT.

4.5 ISGS #2746-2 (Chicago Transit Authority Tracks)

4.5.1 Field Observations at ISGS #2746-2

E & E advanced one boring (2746-02-B01) at ISGS #2746-2 (Chicago Transit Authority Tracks) (see Table 4-1 and Figure 4-7A). VOCs were not detected

during headspace screening of site soils, and the soils did not exhibit evidence of potential chemical contamination. E & E collected three samples from the boring for laboratory analysis. A groundwater sample was not proposed for collection at this site.

4.5.2 Analytical Results for ISGS #2746-2

VOCs were not detected in the samples from this site (see Table 4-2). Twelve SVOCs, all PAHs, were detected in the site samples. Twenty metals were detected in the site samples, and six of the metals were detected by TCLP analysis. Based on the TCLP metals results, all of the samples were analyzed for SPLP manganese, and manganese was detected in all of the samples. The sample pH levels ranged from 8.01 to 8.27 SU.

4.5.3 Nature and Extent of Contamination above Applicable Criteria at ISGS #2746-2

Arsenic and manganese were detected above reference concentrations in soil at the site (see Table 4-4). The total arsenic concentration detected in sample 2746-02-B01 (12-18) exceeded all applicable comparison criteria, including the TACO Tier 1 RO for the residential soil exposure route. Manganese was detected by TCLP and SPLP analyses at concentrations above the TACO Tier 1 RO for the SCGIER in samples 2746-02-B01 (0-6) and 2746-02-B01 (12-18); however, the total manganese concentrations detected in the samples were below the most stringent MAC.

No other COCs were identified at the site. Total chromium was detected at a concentration above the most stringent MAC in sample 2746-02-B01 (0-6), but chromium was not detected by TCLP analysis. Total iron was detected at concentrations above the MSA MAC in all of the samples, but iron was not detected in the samples by TCLP analysis. TCLP manganese was detected in sample 2746-02-B01 (6-12) at a concentration exceeding the TACO Tier 1 RO for the SCGIER; however, the total and SPLP manganese concentrations detected in the sample were below applicable reference concentrations.

VOCs were not detected during headspace screening of site soil. The pH levels for all of the samples were within the acceptable range for management of the soil at a CCDD facility or USFO.

4.5.4 IDOT Construction Activities at ISGS #2746-2

4.5.4.1 Soil

Planned construction activities at this site include resurfacing and widening of the roadway, storm sewer installation, and retention wall installation (see Figure 4-7A). Excavations associated with the improvements are estimated to extend to a maximum depth of 18 feet bgs.

The assumed areas of impact and COCs are depicted on Figures 4-7A and 4-7B. Table 4-6 presents the total volume of soil anticipated for excavation at the site

along with an estimated volume of impacted soil within the proposed construction excavation area that will require proper handling and disposal if removed from the site. Construction volumes were estimated using excavation quantities provided by IDOT.

4.6 ISGS #2746-61 (IDOT ROW)

4.6.1 Field Observations at ISGS #2746-61

E & E advanced one boring (2746-61-B01) at ISGS #2746-61 (IDOT ROW) (see Table 4-1 and Figure 4-6A). VOCs were not detected during headspace screening of site soils, and the soils did not exhibit evidence of potential chemical contamination. E & E collected one sample from the boring for laboratory analysis. A groundwater sample was not proposed for collection at this site.

4.6.2 Analytical Results for ISGS #2746-61

VOCs and SVOCs were not detected in the sample from this site (see Table 4-2). Sixteen metals were detected in the site sample, and two of the metals were detected by TCLP analysis. Based on the TCLP metals results, sample 2746-61-B01 (0-5) was analyzed for SPLP manganese, and SPLP manganese was detected in the sample. The sample pH was 8.71 SU.

4.6.3 Nature and Extent of Contamination above Applicable Criteria at ISGS #2746-61

No COCs were identified at the site. TCLP manganese was detected in the sample at a concentration above the TACO Tier 1 RO for the SCGIER; however, the total and SPLP manganese concentrations detected in the sample was below applicable reference criteria.

VOCs were not detected during headspace screening of site soil, and the sample pH was within the acceptable range for management of the soil at a CCDD facility or USFO.

4.6.4 IDOT Construction Activities at ISGS #2746-61

4.6.4.1 Soil

Planned construction activities at this site include roadway resurfacing and widening and noise barrier installation (see Figure 4-6A). Excavations associated with the improvements are estimated to extend to a maximum depth of 5 feet bgs.

The site area and analytes detected in site soil are depicted on Figures 4-6A and 4-6B. COCs were not detected in soil at the site; consequently E & E has not calculated a volume of soil requiring off-site management.

NOTE: Maximum Allowable Concentration refers to the values listed in the Summary of Maximum Allowable Concentrations of Chemical Constituents in Uncontaminated Soil Used as Fill Material at Regulated Fill Operations, 35 Ill. Adm. Code 1100.Subpart F dated 8/27/12. Total COC concentrations exceeding a MAC are highlighted; however, further evaluation is required to determine if the detected metals concentrations exceed the applicable MAC. For metals, total, TCLP and SPLP results are evaluated collectively to determine compliance with MACs.

Key:

- ISGS = Illinois State Geological Survey.
- MAC = Maximum Allowable Concentrations of Chemical Constituents in Uncontaminated Soil.
- mg/L = Milligrams per liter.
- mg/kg = Milligrams per kilogram.
- MSA = Metropolitan Statistical Area.
- = Not applicable or not specified. Groundwater protection objectives are shown for inorganics via TCLP/SPLP analyses.
- SPLP = Synthetic precipitation leaching procedure.
- SVOCs = Semivolatile organic compounds.
- TACO = Tiered Approach to Corrective Action Objectives.
- TCLP = Toxicity characteristic leaching procedure.
- VOCs = Volatile organic compounds.

**Table 4-3 Detected Water Analytes and Comparison to TACO Tier 1 Criteria
FAI 90 (Interstate 90), Contract No. 60Y39
Chicago, Harwood Heights, Norwood Park, Cook County, Illinois**

Chemical	Maximum Concentration Detected	TACO Tier 1 Remediation Objectives for Groundwater	
		Class I	Class II
ISGS #2746-1 (IDOT ROW)			
SVOCs (mg/L)			
Bis(2-ethylhexyl) phthalate	0.0033	0.006	0.06
Inorganics (mg/L)			
Arsenic	0.0073	0.05	0.2
Barium	0.067	2.0	2.0
Boron	0.17	2.0	2.0
Cadmium	0.0004	0.005	0.05
Calcium	460	NS	NS
Chromium	0.0082	0.1	1.0
Cobalt	0.04	1.0	1.0
Copper	0.022	0.65	0.65
Iron	18.0	5.0	5.0
Lead	0.0067	0.0075	0.1
Magnesium	190	NS	NS
Manganese	1.7	0.15	10
Nickel	0.047	0.1	2.0
Potassium	5.2	NS	NS
Selenium	0.0014	0.05	0.05
Sodium	900	NS	NS
Vanadium	0.0071	0.049	0.1
Zinc	0.088	5.0	10

Key:

- ISGS = Illinois State Geological Survey.
- µg/L = Micrograms per liter.
- mg/L = Milligrams per liter.
- NS = Not specified.
- TACO = Tiered Approach to Corrective Action Objectives.

A shaded concentration indicates an exceedance of one or more TACO criteria.

Notes:

^a Contaminants of concern are defined as analytes that were detected at a concentration above one or more reference criteria. The following compounds and analytes have MACs for both MSAs and non-MSAs: arsenic, iron, manganese, benzo(a)anthracene, benzo(a)pyrene, benzo(b)fluoranthene, dibenzo(a,h)anthracene, and indeno(1,2,3-cd)pyrene. TCLP/SPLP exceedances of the SCGIER are considered to be MAC exceedances when the total metal concentration also exceeds the MAC.

^b Soils that contain constituent concentrations below the most stringent MACs may be managed off site as "uncontaminated soil" pursuant to 35 IAC 1100. Uncontaminated soil with a pH range of 6.25 to 9.0 and no PID readings above background levels may be managed off site to a Clean Construction and Demolition Debris (CCDD) facility or uncontaminated soil fill operation (USFO). When a constituent has a MAC based on a Metropolitan Statistical Area (MSA), soils that contain constituents below the applicable MACs for an MSA, exhibit a pH within the range of 6.25 to 9.0, and do not exhibit PID readings above background levels may be managed off site as "uncontaminated soil" to a CCDD or USFO within the MSA county, excluding Chicago. Soils containing constituents above MACs for an MSA that cannot be managed on site are estimated as non-special waste. Metals (excluding arsenic) are considered eligible for off-site management to a CCDD or USFO facility unless the detected total, TCLP, and SPLP concentrations exceed applicable comparison criteria.

^c The detected analyte concentration exceeds the TACO Tier 1 remediation objective for the residential soil exposure route.

^d The detected analyte concentration exceeds the TACO Tier 1 remediation objective for the construction worker exposure route.

Key:

ISGS = Illinois State Geological Survey.
MAC = Maximum Allowable Concentrations of Chemical Constituents in Uncontaminated Soil Used as Fill at Regulated Fill Operations.
MSA = Metropolitan Statistical Area.
PID = Photoionization detector.

SPLP = Synthetic precipitation leaching procedure.
TCLP = Toxicity characteristic leaching procedure.
T/S = Toxicity characteristic leaching procedure/Synthetic precipitation leaching procedure.

FAI 90 (Interstate 90), Contract No. 60Y39
Chicago, Harwood Heights, and Norwood Park, Cook County, Illinois**

Boring ID	Contaminants of Concern		Estimated Surface Area of Impacted Soil (sq. yards)	Estimated Vertical Extent of Impacted Soil (feet)	Estimated Volume of Impacted Soil ^a (cubic yards)
	Above All Applicable Comparison Criteria	Above Most Stringent MAC, Chicago MAC, or SCGIER Criteria Only			
ISGS #2746-02 (Chicago Transit Authority Tracks)					
2746-02-B01	Arsenic	TCLP/SPLP manganese	1,652.8	18.00	9,916.7
Aggregate Volume of Impacted Soil:					9,917

Note: Contaminants of concern are analytes that were detected at concentrations above one or more reference criteria.

^a The aggregate volume estimates are based on the following assumptions:

- Impacted soil volumes can be estimated using simple geometric shapes.
- The vertical extent of inorganic and PAH contamination is assumed to extend from the ground surface to the depth interval where the exceedance was observed. If multiple samples were collected, the impacted depth intervals to be adjusted accordingly.
- The vertical extent of VOC contamination is assumed to be contiguous between the interval where the exceedance was observed, and adjacent intervals with PID readings above background.
- The lateral extent of impacted soil is assumed to extend one-half the distance between an impacted boring and an adjacent unimpacted boring. If there are no borings within 100 feet, the impacted area will extend 50 feet from the boring in each direction.

Key:

COCs = Contaminants of concern.

ISGS = Illinois State Geological Survey.

MACs = Maximum allowable concentrations of chemical constituents in uncontaminated soil used as fill material at regulated fill operations.

MSA = Metropolitan Statistical Area.

PAH = Polynuclear aromatic hydrocarbon.

PID = Photoionization detector.

VOC = Volatile organic compound.

T/S = Toxicity characteristic leaching procedure/Synthetic precipitation leaching procedure.

Key:

COCs = Contaminants of concern.

ISGS = Illinois State Geological Survey.

MACs = Maximum allowable concentration of chemical constituents in uncontaminated

soil used as fill material at regulated fill operations.

T/S = Toxicity characteristic leaching procedure/synthetic precipitation leaching procedure.

MSA = Metropolitan Statistical Area.

PAH = Polynuclear aromatic hydrocarbon.

PID = Photoionization detector.

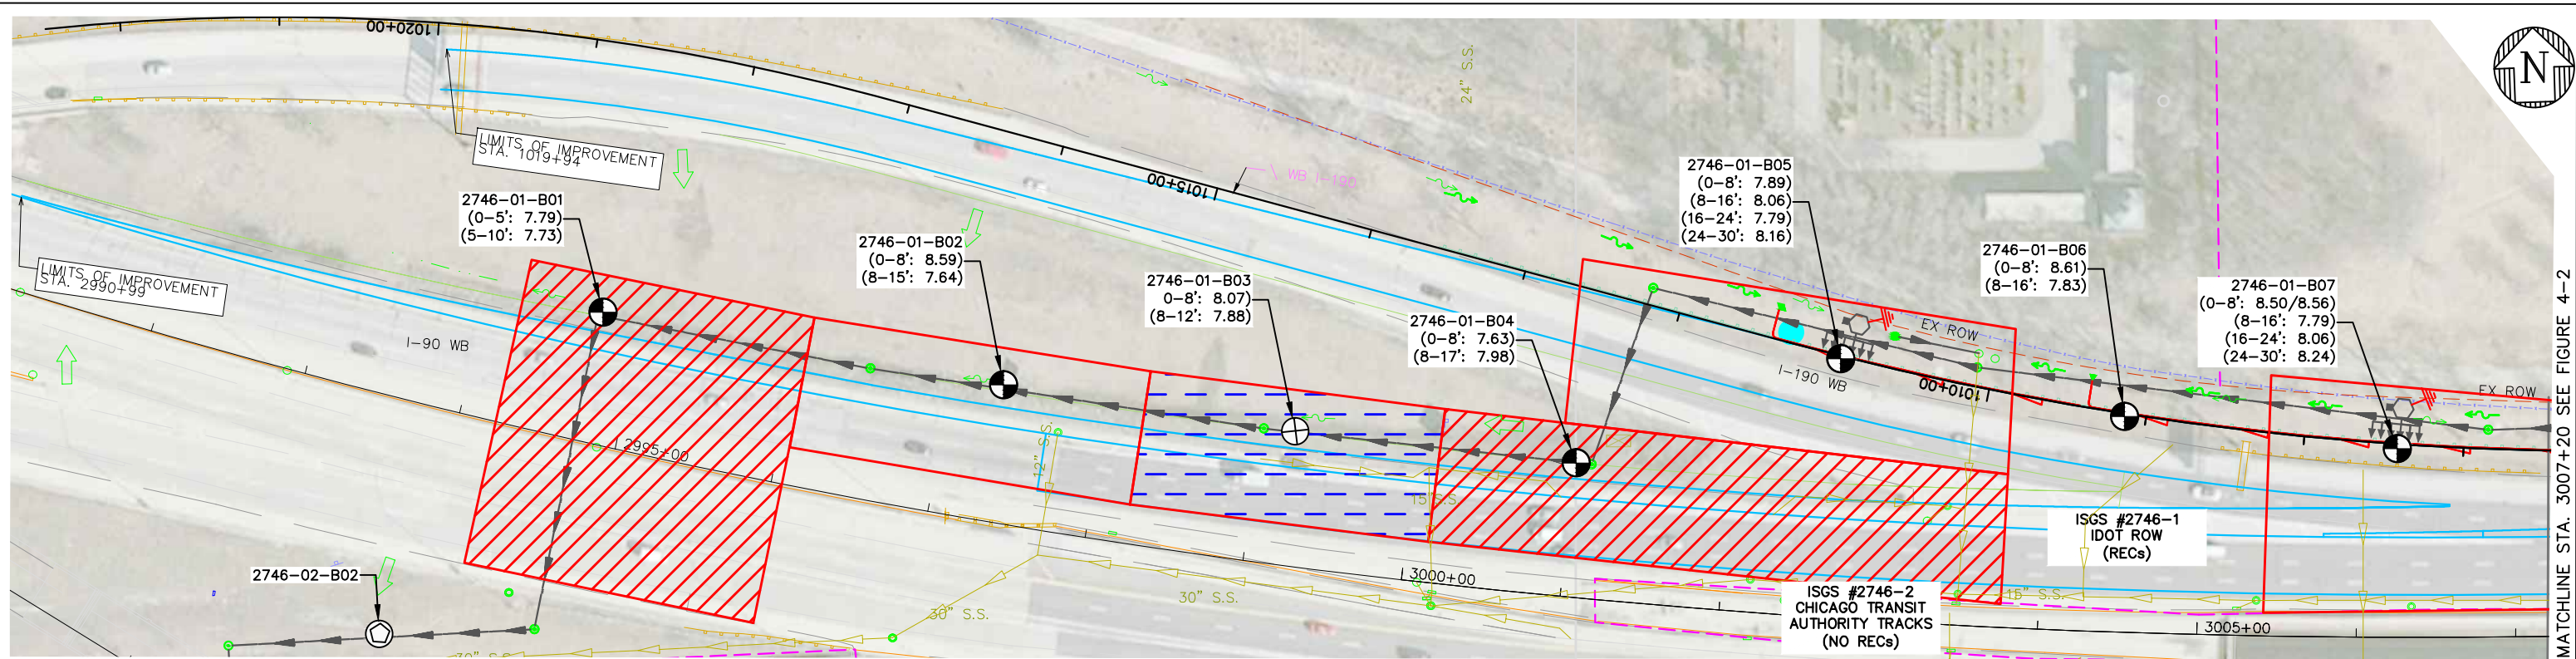

VOC = Volatile organic compound.

- PROPOSED CONSTRUCTION EXCAVATION AREA WHERE ONE OR MORE CONTAMINANTS OF CONCERN WERE DETECTED ABOVE ALL APPLICABLE CRITERIA
- PROPOSED CONSTRUCTION EXCAVATION AREA WHERE ONE OR MORE CONTAMINANTS OF CONCERN IN SOIL EXCEED THE MOST STRINGENT MACS, BUT ARE BELOW LOCATION-SPECIFIC MACS FOR A METROPOLITAN STATISTICAL AREA OR TCLP/SPLP METALS EXCEED THE TACO REMEDIATION OBJECTIVE FOR THE SCGIER, BUT THE TOTAL METAL CONCENTRATION IS BELOW THE MAC.
- PROPOSED CONSTRUCTION AREA WHERE ONE OR MORE COCS WERE DETECTED IN GROUNDWATER ABOVE TACO TIER 1 REMEDIATION OBJECTIVES.

Key to Data Table
 MAC = Maximum Allowable Concentration of Chemical Constituent in Uncontaminated Soil Used as Fill Material At Regulated Fill Operations
 mg/kg = Milligrams per kilogram
 mg/L = Milligrams per liter
 MSA = Metropolitan Statistical Area
 TACO = Tiered Approach to Corrective Action Objectives
 TCLP = Toxicity Characteristic Leaching Procedure
 SCGIER = Soil Component of the Groundwater Ingestion Exposure Route
 GCGIER = Groundwater Component of the Groundwater Ingestion Exposure Route
 SPLP = Synthetic Precipitation Leaching Procedure
 ND = Not detected
 NA = Not analyzed
 J = Estimated value
 U = Analyte was analyzed for but not detected
 † = Concentration exceeds the most stringent MAC
 m = Concentration exceeds the MAC for an MSA
 L = The detected concentration exceeds the TACO Tier 1 RO for the SCGIER
 r = Concentration exceeds a TACO Tier 1 RO for residential soil exposure
 GCGIER = Groundwater Component of the Groundwater Ingestion Exposure Route (Class 1)
 W1,2 = Concentration exceeds the Tier 1 RO for the GCGIER (Class 1 and 2)
 * = Concentration exceeds the most stringent MAC, but is below the MAC for an MSA
 * = Concentration exceeds applicable comparison criteria.

Key to Data Table

MAC = Maximum Allowable Concentration of Chemical Constituent in Uncontaminated Soil Used as Fill Material At Regulated Fill Operations

mg/kg = Milligrams per kilogram.

mg/L = Milligrams per liter.

MSA = Metropolitan Statistical Area

TACO = Tiered Approach to Corrective Action Objectives

TCLP = Toxicity Characteristic Leaching Procedure.

SCGIER = Soil Component of the Groundwater Ingestion Exposure Route

SPLP = Synthetic Precipitation Leaching Procedure.

† = Concentration exceeds the most Stringent MAC, but is below the MAC for an MSA.

†m = Concentration exceeds the most stringent MAC and the MAC for Chicago.

ND = Not detected.

NA = Not analyzed.

J = Estimated value.

U = Analyte was analyzed for but not detected.

= pH is less than 6.25 or greater than 9.0 standard units.

† = Concentration exceeds the most stringent MAC.

†m = Concentration exceeds the MAC for an MSA.

* = Concentration exceeds the MAC for Chicago corporate limits.

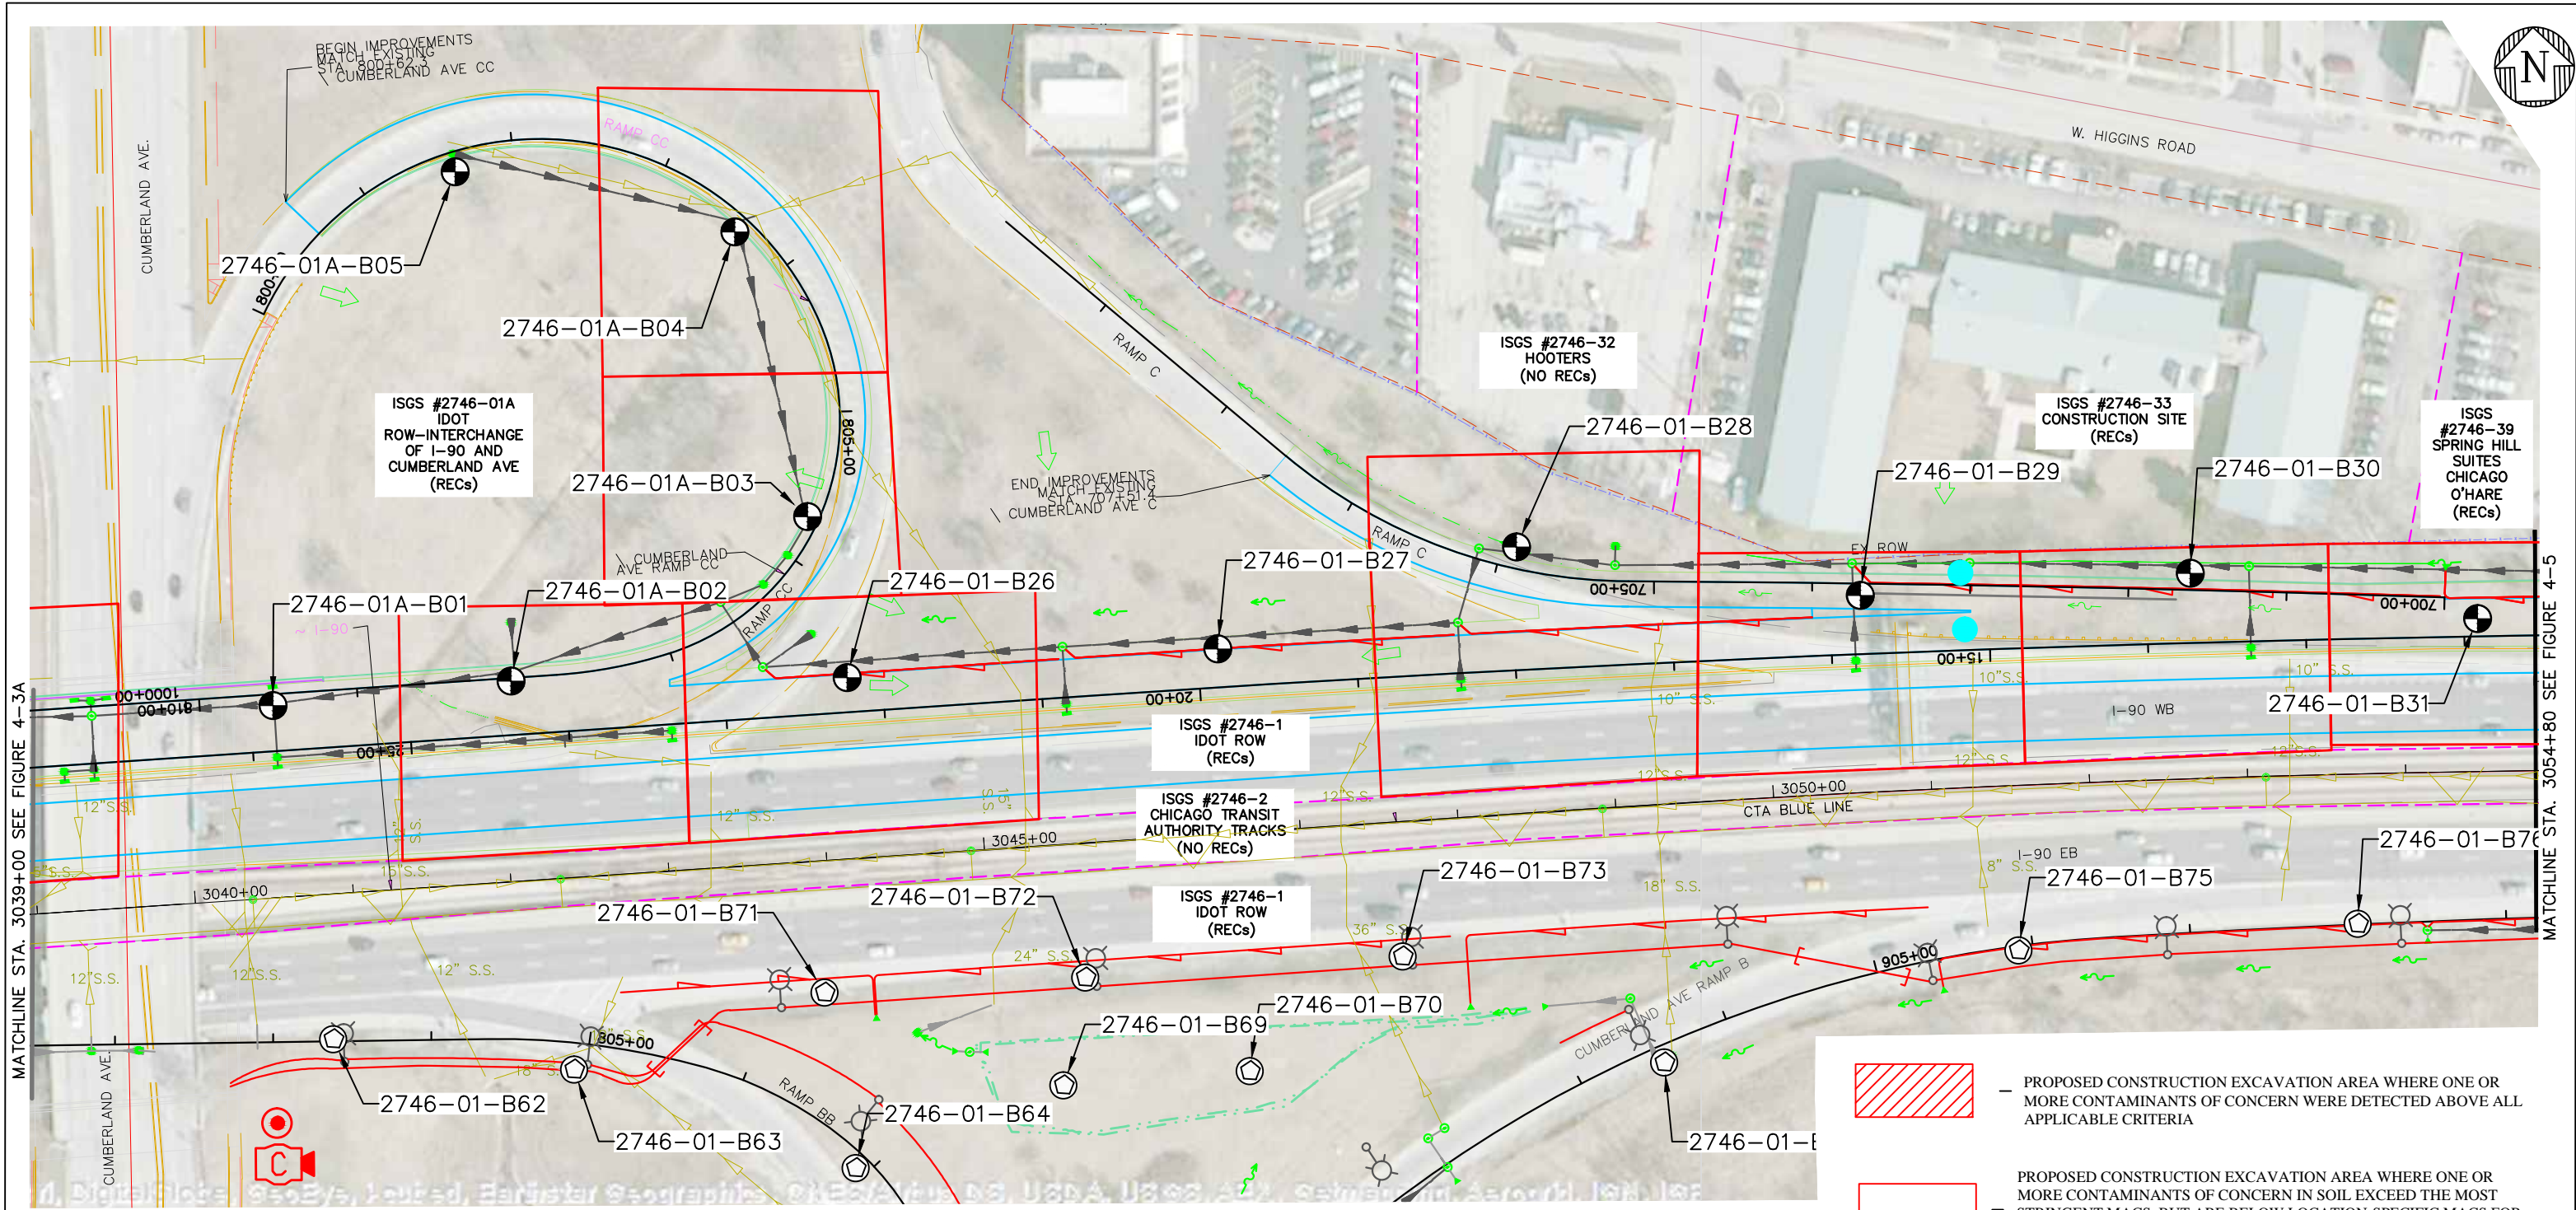

L = The detected concentration exceeds the TACO Tier 1 RO for the SCGIER.

r = Concentration exceeds a TACO Tier 1 RO for residential soil exposure.

■ = Concentration exceeds applicable comparison criteria.

Key to Data Table

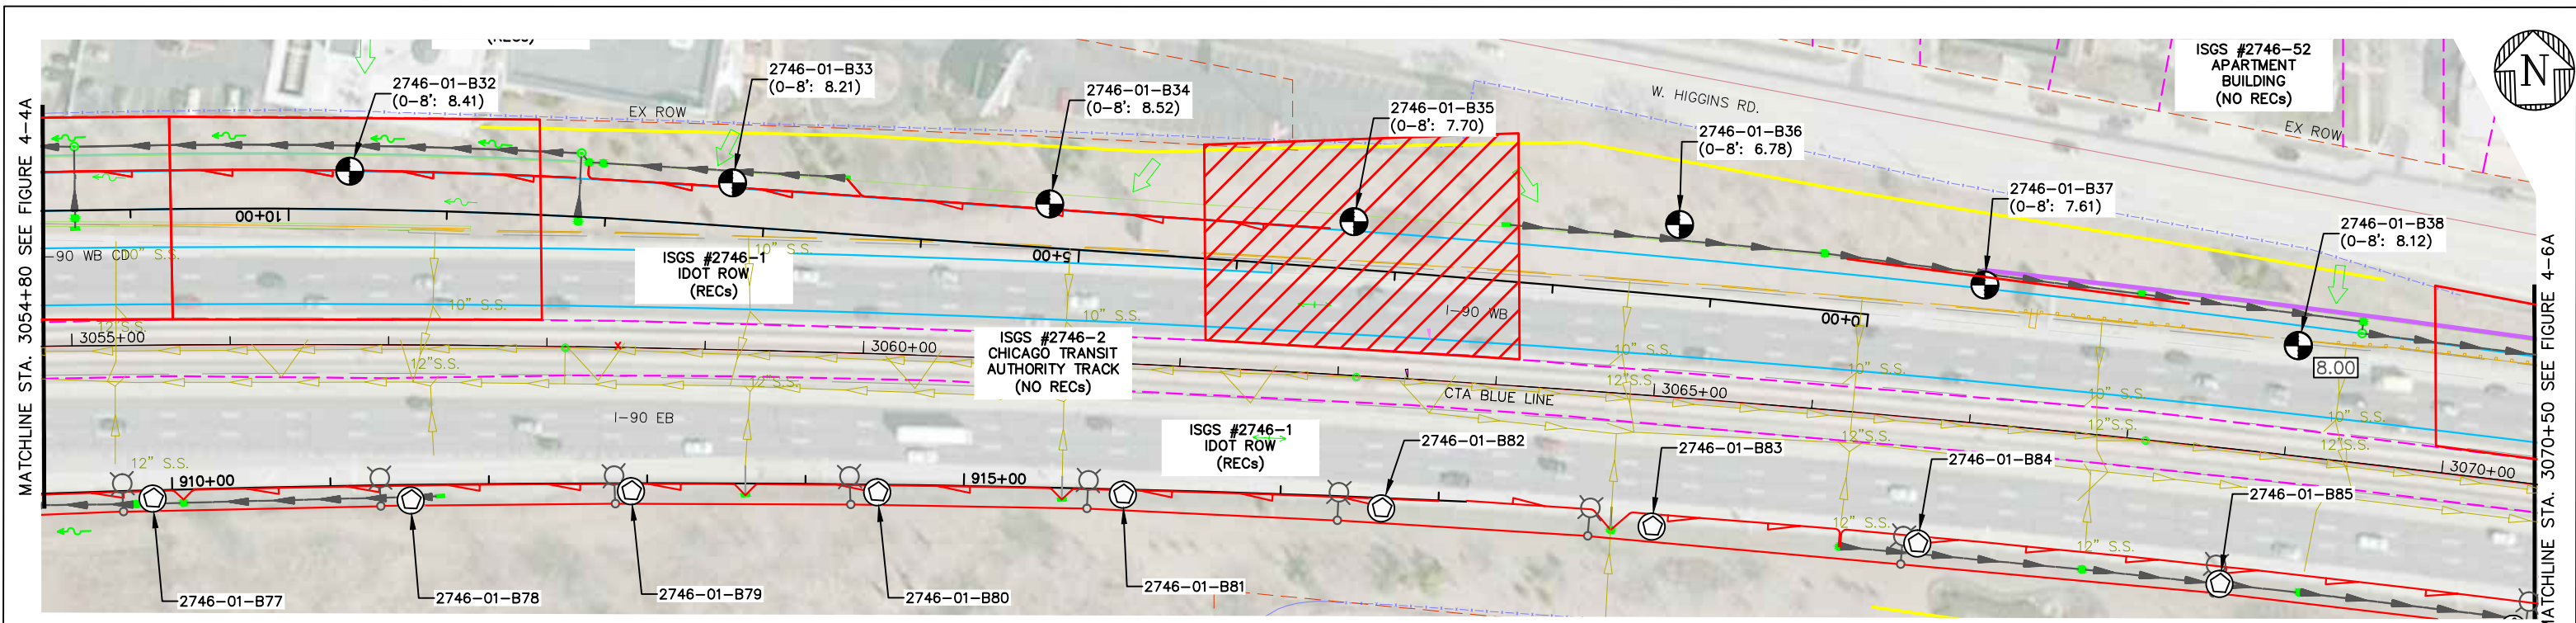

MAC = Maximum Allowable Concentration of Chemical Constituent in Uncontaminated Soil Used as Fill Material At Regulated Fill Operations
mg/kg = Milligrams per kilogram
mg/L = Milligrams per liter
MSA = Metropolitan Statistical Area
TACO = Tiered Approach to Corrective Action Objectives
TCLP = Toxicity Characteristic Leaching Procedure
SCGIER = Soil Component of the Groundwater Ingestion Exposure Route

SPLP = Synthetic Precipitation Leaching Procedure
ND = Not detected
NA = Not analyzed
J = Estimated value
U = Analyte was analyzed for but not detected
† = Concentration exceeds the most stringent MAC
m = Concentration exceeds the MAC for an MSA
L = The detected concentration exceeds the TACO Tier 1 RO for the SCGIER

Yellow background = Concentration exceeds the most Stringent MAC, but is below the MAC for an MSA
Grey background = Concentration exceeds applicable comparison criteria

Key to Data Table

MAC = Maximum Allowable Concentration of Chemical Constituent in Uncontaminated Soil Used as Fill Material At Regulated Fill Operations
 mg/kg = Milligrams per kilogram.
 mg/L = Milligrams per liter.
 MSA = Metropolitan Statistical Area
 TACO = Tiered Approach to Corrective Action Objectives
 TCLP = Toxicity Characteristic Leaching Procedure.
 SCGIER = Soil Component of the Groundwater Ingestion Exposure Route
 SPLP = Synthetic Precipitation Leaching Procedure.
 = Concentration exceeds applicable comparison criteria.

ND = Not detected.
 NA = Not analyzed.
 J = Estimated value.
 U = Analyte was analyzed for but not detected.
 † = Concentration exceeds the most stringent MAC.
 m = Concentration exceeds the MAC for an MSA.
 L = The detected concentration exceeds the TACO Tier 1 RO for the SCGIER.
 c = Concentration exceeds a TACO Tier 1 RO for construction worker exposure.
 r = Concentration exceeds a TACO Tier 1 RO for residential soil exposure.

Conclusions and Recommendations

E & E's investigation has identified COCs in project area soils and groundwater. The following sections summarize E & E's investigation findings and recommendation for classification and management of impacted soil based on the comparison with MACs and TACO Tier 1 ROs. E & E has included an uncontaminated soil certification form in Appendix E for sites where soil that was found to meet the criteria for off-site management at a CCDD facility or USFO.

E & E's field investigation was designed to provide an initial characterization of site conditions at pre-designated boring locations. The investigation was limited in terms of analytical parameters and the number of samples collected, based on the known history of the property. Consequently, the findings and conclusion of this investigation are subject to revision if more site data becomes available. Soil removed from outside E & E's investigation area that exhibits discoloration or odor indicative of contamination should be sampled to determine the proper disposal classification.

5.1 Estimated Soil Management Volumes and Costs

5.1.1 ISGS #2746-1 (IDOT ROW)

Benzo(a)anthracene, benzo(a)pyrene, benzo(b)fluoranthene, carbazole, dibenzo(a,h)anthracene, indeno(1,2,3-cd)pyrene, arsenic, copper, lead, and manganese were identified as COCs in soil at ISGS #2746-1 (IDOT ROW). VOCs were not detected during headspace screening of site soil. The soil pH levels associated with borings 2746-01-B14, 2746-01-B16, and 2746-01-B17 were above the acceptable range for management of the soil at a CCDD facility or USFO. The soil pH levels associated with the remaining borings were within the acceptable range for management of soil at a CCDD facility or USFO.

Soil associated with the following borings must be managed off-site as non-special waste, providing that a non-special waste certification is submitted by the generator according to the conditions set forth in 415 Illinois Compiled Statutes (ILCS) 5/22.48 and 415 ILCS 5/3.475. The property history and available analytical data indicate a non-special waste certification can be applied to soil associated with the following borings:

- 2746-01-B01 (manganese)
- 2746-01-B10 (benzo(a)pyrene, copper, lead, TCLP/SPLP manganese)
- 2746-01-B16 (benzo(a)anthracene, benzo(a)pyrene, benzo(b)fluoranthene, dibenzo(a,h)anthracene, TCLP/SPLP manganese, pH)
- 2746-01-B23 (benzo(a)anthracene, benzo(a)pyrene, benzo(b)fluoranthene, carbazole, dibenzo(a,h)anthracene, indeno(1,2,3-cd)pyrene, TCLP/SPLP manganese)
- 2746-01-B35 (arsenic, TCLP/SPLP manganese)
- 2746-01-B44 (benzo(a)pyrene, lead, TCLP/SPLP manganese), and
- 2746-01-B56 (lead).

Soil associated with the following borings may be managed on-site as fill. If soil associated with these borings cannot be managed on-site, the soil must be managed off-site as non-special waste:

- 2746-01-B04 (lead)
- 2746-01-B14 (benzo(a)anthracene, benzo(a)pyrene, benzo(b)fluoranthene, dibenzo(a,h)anthracene, TCLP/SPLP manganese, pH), and
- 2746-01-B17 (pH).

Soil associated with the following borings may be managed on-site as fill. If the soil cannot be managed on-site, soil associated with the following borings may be managed off-site as uncontaminated soil at a CCDD facility or USFO within an MSA, including Chicago:

- 2746-01-B03 (benzo(a)pyrene, TCLP/SPLP manganese)
- 2746-01-B22 (benzo(a)pyrene, TCLP/SPLP manganese)
- 2746-01-B25 (benzo(a)pyrene, TCLP/SPLP manganese), and
- 2746-01-B31 (benzo(a)pyrene, TCLP/SPLP lead and TCLP/SPLP manganese).

Soil associated with the following borings may be managed on-site as fill. If the soil cannot be managed on-site, soil associated with the following borings may be managed off-site as uncontaminated soil at a CCDD facility or USFO:

- 2746-01-B02 (TCLP/SPLP manganese)
- 2746-01-B05 (TCLP/SPLP manganese)
- 2746-01-B07 (TCLP/SPLP lead and TCLP/SPLP manganese)
- 2746-01-B08 (TCLP/SPLP manganese)
- 2746-01-B09 (TCLP/SPLP lead and TCLP/SPLP manganese)
- 2746-01-B11 (TCLP/SPLP manganese)

- 2746-01-B12 (TCLP/SPLP manganese)
- 2746-01-B13 (TCLP/SPLP manganese)
- 2746-01-B15 (TCLP/SPLP manganese)
- 2746-01-B18 (TCLP/SPLP manganese)
- 2746-01-B19 (TCLP/SPLP manganese)
- 2746-01-B20 (TCLP/SPLP manganese)
- 2746-01-B24 (TCLP/SPLP lead and TCLP/SPLP manganese)
- 2746-01-B26 (TCLP/SPLP lead and TCLP/SPLP manganese)
- 2746-01-B28 (TCLP/SPLP lead and TCLP/SPLP manganese)
- 2746-01-B29 (TCLP/SPLP manganese)
- 2746-01-B30 (TCLP/SPLP manganese)
- 2746-01-B32 (TCLP/SPLP manganese)
- 2746-01-B39 (TCLP/SPLP manganese)
- 2746-01-B40 (TCLP/SPLP lead and TCLP/SPLP manganese)
- 2746-01-B41 (TCLP/SPLP manganese)
- 2746-01-B43 (TCLP/SPLP manganese)
- 2746-01-B45 (TCLP/SPLP manganese)
- 2746-01-B49 (TCLP/SPLP manganese)
- 2746-01-B53 (TCLP/SPLP manganese)
- 2746-01-B54 (TCLP/SPLP manganese)
- 2746-01-B55 (TCLP/SPLP lead)
- 2746-01-B57 (TCLP/SPLP manganese).

COCs were not identified in soil associated with borings 2746-01-B06; 2746-01-B21; 2746-01-B27; 2746-01-B33; 2746-01-B34; 2746-01-B36; 2746-01-B37; 2746-01-B38; 2746-01-B42; 2746-01-B46; 2746-01-B47; 2746-01-B48; 2746-01-B50; 2746-01-B51; and 2746-01-B52. Soil associated with these borings may be managed without restriction:

Costs estimated for the off-site disposal of soil are presented in Table 5-1. Based on the estimated construction excavation quantities presented in Table 4-6, E & E estimates that approximately 15,968 cubic yards of soil at the site will require off-site disposal as non-special waste, and approximately 44,539 cubic yards of soil at the site may be managed off-site as uncontaminated soil. The estimated cost for off-site disposal of soil removed from the site is \$3,900,844.00. The estimated cost includes costs for management of impacted groundwater at the site, discussed in Section 5.3.

5.1.2 ISGS #2746-1a (IDOT ROW – Interchange of I-90 and Cumberland Ave.)

Benzo(a)pyrene, arsenic, lead, and manganese were identified as COCs in soil at ISGS #2746-1a (IDOT ROW – Interchange of I-90 and Cumberland Ave.) VOCs were not detected during headspace screening of site soil. The soil pH levels associated with the borings were within the acceptable range for management of the soil at a CCDD facility or USFO.

COCs were not identified in soil associated with borings 2746-01A-B01 and 2746-01A-B05. Soil associated with these borings may be managed without restriction

Soil associated with boring 2746-01A-B02 (TCLP/SPLP manganese) may be managed on-site as fill. If it cannot be managed on-site, soil associated with the boring may be managed off-site as uncontaminated soil at a CCDD facility or USFO.

Soil associated with borings 2746-01A-B03 (benzo(a)pyrene, TCLP/SPLP lead and TCLP/SPLP manganese) and 2746-01A-B04 (arsenic, TCLP/SPLP lead and TCLP/SPLP manganese) may be managed on-site as fill. If it cannot be managed on-site, soil associated with the borings may be managed off-site as uncontaminated soil at a CCDD facility or USFO within an MSA, including Chicago.

Costs estimated for the off-site disposal of soil are presented in Table 5-1. Based on the estimated construction excavation quantities presented in Table 4-6, E & E estimates that approximately 2,747 cubic yards of soil at the site may be managed off-site as uncontaminated soil. The estimated cost for off-site disposal of soil removed from the site is \$177,633.00.

5.1.3 ISGS #2746-1b (IDOT ROW – Intersection of I-90 and Canfield Ave.)

Benzo(a)pyrene, dibenzo(a,h)anthracene, and manganese were identified as COCs in soil at ISGS #2746-1b (IDOT ROW – Intersection of I-90 and Canfield Ave.). VOCs were not detected during headspace screening of site soil. The soil pH associated with boring 2746-01B-B02 was above the acceptable range for management of the soil at a CCDD facility or USFO. The pH levels for soil associated with boring 2746-01B-B01 were within the acceptable range for management of soil at a CCDD facility or USFO.

Soil associated with boring 2746-01B-B01 (TCLP/SPLP manganese) may be managed on-site as fill. If it cannot be managed on-site, soil associated with the boring may be managed off-site as uncontaminated soil at a CCDD facility or USFO.

Soil associated with boring 2746-01B-B02 (benzo(a)pyrene, dibenzo(a,h)anthracene, pH) may be managed on-site as fill. If it cannot be managed on-site, soil

associated with the boring must be managed off-site as non-special waste, providing that a non-special waste certification is submitted by the generator according to the conditions set forth in 415 ILCS 5/22.48 and 415 ILCS 5/3.475. The property history and available analytical data indicate a non-special waste certification can be applied to soil associated with the boring.

Costs estimated for the off-site disposal of soil are presented in Table 5-1. Based on the estimated construction excavation quantities presented in Table 4-6, E & E estimates that approximately 685 cubic yards of soil at the site will require off-site disposal as non-special waste, and approximately 685 cubic yards of soil at the site may be managed off-site as uncontaminated soil. The estimated cost for off-site disposal of soil removed from the site is \$89,505.00.

5.1.4 ISGS #2746-2 (Chicago Transit Authority Tracks)

Arsenic and manganese were identified as COCs in soil at ISGS #2746-2 (Chicago Transit Authority Tracks). VOCs were not detected during headspace screening of site soil, and the soil pH levels associated with the boring were within the acceptable range for management of the soil at a CCDD facility or USFO.

Soil associated with boring 2746-02-B01 (arsenic, TCLP/SPLP manganese) must be managed off-site as non-special waste, providing that a non-special waste certification is submitted by the generator according to the conditions set forth in 415 ILCS 5/22.48 and 415 ILCS 5/3.475. The property history and available analytical data indicate a non-special waste certification can be applied to soil associated with the boring.

Costs estimated for the off-site disposal of soil are presented in Table 5-1. Based on the estimated construction excavation quantities presented in Table 4-6, E & E estimates that approximately 29 cubic yards of soil at the site will require off-site disposal as non-special waste. The estimated cost for off-site disposal of soil removed from the site is \$3,681.00.

5.1.5 ISGS #2746-61 (IDOT ROW)

COCs were not identified in soil at ISGS #2746-61 (IDOT ROW). VOCs were not detected during headspace screening of site soil, and the soil pH associated with the boring was within the acceptable range for management of the soil at a CCDD facility or USFO. Soil associated with boring 2746-61-B01 may be managed without restriction.

5.2 Soil Management Areas and Applicable Regulations

5.2.1 ISGS #2746-1 (IDOT ROW)

Station 2994+25 to Station 2996+05 (I-90 WB), 0 to 90 feet RT, and 0 to 100 feet LT (IDOT ROW, PESA site 2746-1, 7200-8900 blocks of I-90): This material meets the criteria of Article 669.09(a)(5) and shall be managed in accordance with Article 669.09. COC sampling parameters: manganese.

5 Conclusions and Recommendations

Station 2996+05 to Station 2998+25 (I-90 WB), 20 to 100 feet LT (IDOT ROW, PESA site 2746-1, 7200-8900 blocks of I-90): This material meets the criteria of Article 669.09(a)(2) and shall be managed in accordance with Article 669.09. COC sampling parameters: manganese.

Station 2998+25 to Station 3000+15 (I-90 WB), 20 to 100 feet LT (IDOT ROW, PESA site 2746-1, 7200-8900 blocks of I-90): This material meets the criteria of Article 669.09(a)(3) and shall be managed in accordance with Article 669.09. COC sampling parameters: benzo(a)pyrene and manganese.

Station 3000+15 to Station 3003+75 (I-90 WB), 20 to 100 feet LT (IDOT ROW, PESA site 2746-1, 7200-8900 blocks of I-90): This material meets the criteria of Article 669.09(a)(1) and shall be managed in accordance with Article 669.09. COC sampling parameters: lead.

Station 1009+85 to Station 1012+75 (I-190), 0 to 40 feet RT, and 0 to 80 feet LT (IDOT ROW, PESA site 2746-1, 7200-8900 blocks of I-90): This material meets the criteria of Article 669.09(a)(2) and shall be managed in accordance with Article 669.09. COC sampling parameters: manganese.

Station 3005+45 to Station 3012+30 (I-90 WB), 15 to 140 feet LT (IDOT ROW, PESA site 2746-1, 7200-8900 blocks of I-90): This material meets the criteria of Article 669.09(a)(2) and shall be managed in accordance with Article 669.09. COC sampling parameters: lead and manganese.

Station 3012+30 to Station 3014+65 (I-90 WB), 25 to 170 feet LT (IDOT ROW, PESA site 2746-1, 7200-8900 blocks of I-90): This material meets the criteria of Article 669.09(a)(5) and shall be managed in accordance with Article 669.09. COC sampling parameters: copper, lead, benzo(a)pyrene, and manganese.

Station 3014+65 to Station 3020+80 (I-90 WB), 20 to 170 feet LT (IDOT ROW, PESA site 2746-1, 7200-8900 blocks of I-90): This material meets the criteria of Article 669.09(a)(2) and shall be managed in accordance with Article 669.09. COC sampling parameters: manganese.

Station 3020+80 to Station 3022+85 (I-90 WB), 15 to 170 feet LT (IDOT ROW, PESA site 2746-1, 7200-8900 blocks of I-90): This material meets the criteria of Article 669.09(a)(1) and shall be managed in accordance with Article 669.09. COC sampling parameters: benzo(a)pyrene, benzo(b)fluoranthene, benzo(a)-anthracene, dibenzo(a,h)anthracene, manganese, and pH.

Station 3022+85 to Station 3025+00 (I-90 WB), 10 to 170 feet LT (IDOT ROW, PESA site 2746-1, 7200-8900 blocks of I-90): This material meets the criteria of Article 669.09(a)(2) and shall be managed in accordance with Article 669.09. COC sampling parameters: manganese.

5 Conclusions and Recommendations

Station 3025+00 to Station 3027+10 (I-90 WB), 10 to 170 feet LT (IDOT ROW, PESA site 2746-1, 7200-8900 blocks of I-90): This material meets the criteria of Article 669.09(a)(5) and shall be managed in accordance with Article 669.09. COC sampling parameters: benzo(a)pyrene, benzo(b)fluoranthene, benzo(a)-anthracene, dibenzo(a,h)anthracene, manganese, and pH.

Station 3027+10 to Station 3029+50 (I-90 WB), 10 to 170 feet LT (IDOT ROW, PESA site 2746-1, 7200-8900 blocks of I-90): This material meets the criteria of Article 669.09(b)(1) and shall be managed in accordance with Article 669.09. COC sampling parameters: pH.

Station 3029+50 to Station 3033+70 (I-90 WB), 15 to 120 feet LT (IDOT ROW, PESA site 2746-1, 7200-8900 blocks of I-90): This material meets the criteria of Article 669.09(a)(2) and shall be managed in accordance with Article 669.09. COC sampling parameters: manganese.

Station 906+00 to Station 911+05 (Ramp D), 0 to 90 feet RT, and 0 to 120 feet LT (IDOT ROW, PESA site 2746-1, 7200-8900 blocks of I-90): This material meets the criteria of Article 669.09(a)(2) and shall be managed in accordance with Article 669.09. COC sampling parameters: manganese.

Station 1004+90 to Station 1006+40 (Ramp DD), 0 to 100 feet RT, and 0 to 100 feet LT (IDOT ROW, PESA site 2746-1, 7200-8900 blocks of I-90): This material meets the criteria of Article 669.09(a)(5) and shall be managed in accordance with Article 669.09. COC sampling parameters: benzo(a)pyrene, benzo(b)fluoranthene, benzo(a)anthracene, carbazole, dibenzo(a,h)anthracene, indeno(1,2,3-cd)pyrene, and manganese.

Station 1006+40 to Station 1010+90 (Ramp DD), 0 to 115 feet RT, and 0 to 115 feet LT (IDOT ROW, PESA site 2746-1, 7200-8900 blocks of I-90): This material meets the criteria of Article 669.09(a)(3) and shall be managed in accordance with Article 669.09. COC sampling parameters: benzo(a)pyrene and manganese.

Station 3035+50 to Station 3037+50 (I-90 WB), 20 to 210 feet LT (IDOT ROW, PESA site 2746-1, 7200-8900 blocks of I-90): This material meets the criteria of Article 669.09(a)(2) and shall be managed in accordance with Article 669.09. COC sampling parameters: lead and manganese.

Station 3037+50 to Station 3039+55 (I-90 WB), 20 to 190 feet LT (IDOT ROW, PESA site 2746-1, 7200-8900 blocks of I-90): This material meets the criteria of Article 669.09(a)(3) and shall be managed in accordance with Article 669.09. COC sampling parameters: benzo(a)pyrene and manganese.

Station 3043+15 to Station 3045+35 (I-90 WB), 15 to 165 feet LT (IDOT ROW, PESA site 2746-1, 7200-8900 blocks of I-90): This material meets the criteria of

5 Conclusions and Recommendations

Article 669.09(a)(2) and shall be managed in accordance with Article 669.09.
COC sampling parameters: lead and manganese.

Station 3047+50 to Station 3049+50 (I-90 WB), 15 to 225 feet LT (IDOT ROW, PESA site 2746-1, 7200-8900 blocks of I-90): This material meets the criteria of Article 669.09(a)(2) and shall be managed in accordance with Article 669.09.
COC sampling parameters: lead and manganese.

Station 3049+50 to Station 3053+50 (I-90 WB), 15 to 150 feet LT (IDOT ROW, PESA site 2746-1, 7200-8900 blocks of I-90): This material meets the criteria of Article 669.09(a)(2) and shall be managed in accordance with Article 669.09.
COC sampling parameters: manganese.

Station 3053+50 to Station 3055+60 (I-90 WB), 15 to 140 feet LT (IDOT ROW, PESA site 2746-1, 7200-8900 blocks of I-90): This material meets the criteria of Article 669.09(a)(3) and shall be managed in accordance with Article 669.09.
COC sampling parameters: benzo(a)pyrene, lead, and manganese.

Station 3055+60 to Station 3057+90 (I-90 WB), 15 to 140 feet LT (IDOT ROW, PESA site 2746-1, 7200-8900 blocks of I-90): This material meets the criteria of Article 669.09(a)(2) and shall be managed in accordance with Article 669.09.
COC sampling parameters: manganese.

Station 3062+20 to Station 3064+15 (I-90 WB), 15 to 155 feet LT (IDOT ROW, PESA site 2746-1, 7200-8900 blocks of I-90): This material meets the criteria of Article 669.09(a)(5) and shall be managed in accordance with Article 669.09.
COC sampling parameters: arsenic and manganese.

Station 3070+00 to Station 3072+15 (I-90 WB), 15 to 100 feet LT (IDOT ROW, PESA site 2746-1, 7200-8900 blocks of I-90): This material meets the criteria of Article 669.09(a)(2) and shall be managed in accordance with Article 669.09.
COC sampling parameters: manganese.

Station 3072+15 to Station 3074+10 (I-90 WB), 15 to 100 feet LT (IDOT ROW, PESA site 2746-1, 7200-8900 blocks of I-90): This material meets the criteria of Article 669.09(a)(2) and shall be managed in accordance with Article 669.09.
COC sampling parameters: lead and manganese.

Station 3077+00 to Station 3079+00 (I-90 WB), 15 to 110 feet LT (IDOT ROW, PESA site 2746-1, 7200-8900 blocks of I-90): This material meets the criteria of Article 669.09(a)(2) and shall be managed in accordance with Article 669.09.
COC sampling parameters: manganese.

Station 3081+00 to Station 3083+00 (I-90 WB), 15 to 120 feet LT (IDOT ROW, PESA site 2746-1, 7200-8900 blocks of I-90): This material meets the criteria of

Article 669.09(a)(2) and shall be managed in accordance with Article 669.09.
COC sampling parameters: manganese.

Station 3083+00 to Station 3085+25 (I-90 WB), 15 to 120 feet LT (IDOT ROW, PESA site 2746-1, 7200-8900 blocks of I-90): This material meets the criteria of Article 669.09(a)(5) and shall be managed in accordance with Article 669.09.
COC sampling parameters: benzo(a)pyrene, lead, and manganese.

Station 3085+25 to Station 3087+60 (I-90 WB), 15 to 125 feet LT (IDOT ROW, PESA site 2746-1, 7200-8900 blocks of I-90): This material meets the criteria of Article 669.09(a)(2) and shall be managed in accordance with Article 669.09.
COC sampling parameters: manganese.

Station 3093+80 to Station 3095+90 (I-90 WB), 15 to 90 feet LT (IDOT ROW, PESA site 2746-1, 7200-8900 blocks of I-90): This material meets the criteria of Article 669.09(a)(2) and shall be managed in accordance with Article 669.09.
COC sampling parameters: manganese.

Station 3103+85 to Station 3108+50 (I-90 WB), 20 to 100 feet LT (IDOT ROW, PESA site 2746-1, 7200-8900 blocks of I-90): This material meets the criteria of Article 669.09(a)(2) and shall be managed in accordance with Article 669.09.
COC sampling parameters: manganese.

Station 3108+50 to Station 3110+20 (I-90 WB), 20 to 100 feet LT (IDOT ROW, PESA site 2746-1, 7200-8900 blocks of I-90): This material meets the criteria of Article 669.09(a)(2) and shall be managed in accordance with Article 669.09.
COC sampling parameters: lead.

Station 3110+20 to Station 3112+55 (I-90 WB), 20 to 100 feet LT (IDOT ROW, PESA site 2746-1, 7200-8900 blocks of I-90): This material meets the criteria of Article 669.09(a)(5) and shall be managed in accordance with Article 669.09.
COC sampling parameters: lead.

Station 3112+55 to Station 3115+10 (I-90 WB), 15 to 100 feet LT (IDOT ROW, PESA site 2746-1, 7200-8900 blocks of I-90): This material meets the criteria of Article 669.09(a)(2) and shall be managed in accordance with Article 669.09.
COC sampling parameters: manganese.

5.2.2 ISGS #2746-1a (IDOT ROW – Interchange of I-90 and Cumberland Ave.)

Station 3041+35 to Station 3043+15 (I-90 WB), 20 to 185 feet LT (IDOT ROW, PESA site 2746-1a, Interchange of I-90 and Cumberland Ave): This material meets the criteria of Article 669.09(a)(2) and shall be managed in accordance with Article 669.09. COC sampling parameters: manganese.

Station 802+50 to Station 806+95 (Ramp CC), 0 to 120 feet LT and 0 to 160 feet RT (IDOT ROW, PESA site 2746-1a, Interchange of I-90 and Cumberland Ave): This material meets the criteria of Article 669.09(a)(3) and shall be managed in accordance with Article 669.09. COC sampling parameters: benzo(a)pyrene, lead, and manganese.

5.2.3 ISGS #2746-1b (Intersection of I-90 and Canfield Ave.)

Station 3074+10 to Station 3075+55 (I-90 WB), 15 to 100 feet LT (IDOT ROW, PESA site 2746-1b Intersection of I-90 and Canfield Ave.): This material meets the criteria of Article 669.09(a)(2) and shall be managed in accordance with Article 669.09. COC sampling parameters: manganese.

Station 3075+55 to Station 3077+00 (I-90 WB), 15 to 90 feet LT (IDOT ROW, PESA site 2746-1b Intersection of I-90 and Canfield Ave.): This material meets the criteria of Article 669.09(a)(1) and shall be managed in accordance with Article 669.09. COC sampling parameters: benzo(a)pyrene, dibenzo(a,h)anthracene, and pH.

5.2.4 ISGS #2746-2 (Chicago Transit Authority Tracks)

Station 3099+60 to Station 3101+40 (I-90 WB), 15 to 90 feet LT (Chicago Transit Authority Tracks, PESA site 2746-2, 7200-8900 blocks of I-90): This material meets the criteria of Article 669.09(a)(5) and shall be managed in accordance with Article 669.09. COC sampling parameters: arsenic, manganese.

5.3 Estimated Groundwater Management Volumes and Costs

5.3.1 ISGS #2746-1 (IDOT ROW)

Groundwater was encountered at a depth of 9 feet bgs in boring 2746-01-B03. Excavation in the vicinity of the boring is proposed to an approximate depth of 17 feet bgs for storm sewer installation; consequently, it is anticipated that groundwater will be encountered during construction at the site.

Costs estimated for disposal of impacted groundwater are presented in Table 5-1. E & E assumed that the one excavation volume of impacted groundwater (to the depth that groundwater was encountered) will require off-site management. Based on the estimated dimensions of excavation within the assumed area of impacted groundwater presented in Table 4-7, E & E estimates that approximately 88,569 gallons of water at the site will require off-site management as special waste if it cannot be managed within the excavation. The estimated cost for off-site disposal of the impacted water is \$26,570.70.

5.4 Recommendations

5.4.1 Additional Investigations

E & E does not recommend further investigation for this project. Soil and groundwater in the project area has been characterized with regard to IDOT con-

struction activities. Additional sampling may be required if soil is encountered that exhibits odor or discoloration indicative of contamination during construction excavation activities, or if activities extend beyond the previously investigated area. If groundwater exhibiting odor or discoloration is encountered during construction activities, the water should be sampled to determine proper management requirements.

5.4.2 Prevention of Accelerated Contaminant Migration

Soil containment and storm water runoff control measures are recommended to mitigate the migration of contaminants from any impacted soils that are stockpiled at the sites. If soil must be stockpiled, it should be stored in lined and covered roll-off boxes or segregated from other soils on storage pads designed to prevent migration of contaminants to unimpacted areas.

5.4.3 Comparison of Detected Soil Concentrations with TACO Tier 1 Remediation Objectives for Construction Worker Exposure

The COCs detected in site soil were also compared with TACO Tier 1 ROs for construction worker exposure. Lead was detected above the TACO Tier 1 RO for construction worker ingestion at ISGS #2746-1 (IDOT ROW). The affected borings and detected concentrations are listed in Table 5-2.

VOCs were not detected during headspace screening of site soil; however, chlorinated VOCs were detected below applicable reference concentrations at two boring locations at ISGS #2746-1 (IDOT ROW). If soil unearthed during excavation activities exhibits PID readings, odors, or discoloration indicative of contamination, E & E recommends that the soil be sampled to determine appropriate worker protection measures during construction activities. The health and safety of construction workers are the sole responsibility of the construction contractor, and Occupational Safety and Health Administration (OSHA) regulations should be adhered to during construction activities.

**Table 5-1 Estimated Disposal Costs for Impacted Soil and Groundwater Within IDOT Construction Areas
General Cost Breakdown for Construction Activities
FAI 90 (Interstate 90), Contract No. 60Y39
Chicago, Harwood Heights, and Norwood Park, Cook County, Illinois**

Site	Pay Item/Cost per Unit										Total Cost (Rounded to nearest dollar)
	SPECIAL WASTE PLANS AND REPORTS ^a \$262,412.00 lump sum		NON-SPECIAL WASTE DISPOSAL ^b \$60.00 per cubic yard		NON-SPECIAL WASTE DISPOSAL ^c \$60.00 per cubic yard		SPECIAL WASTE GROUNDWATER DISPOSAL \$0.30 per gallon		SOIL DISPOSAL ANALYSIS ^d \$875.00 each		
	Quantity	Cost	Quantity	Cost	Quantity	Cost	Quantity	Cost	Quantity	Cost	
ISGS #2746-01 (IDOT ROW)	1	\$242,978.00	15,968	\$958,080.00	44,539	\$2,672,340.00	88,569.0	\$26,570.70	1	\$875.00	\$3,900,844.00
ISGS #2746-01A (IDOT ROW - Interchange of I-90 and Cumberland Ave)	1	\$11,938.00	0	\$0.00	2,747	\$164,820.00	--	\$0.00	1	\$875.00	\$177,633.00
ISGS #2746-01B (IDOT ROW - Intersection of I-90 and Canfield Ave)	1	\$6,430.00	685	\$41,100.00	685	\$41,100.00	--	\$0.00	1	\$875.00	\$89,505.00
ISGS #2746-02 (Chicago Transit Authority Tracks)	1	\$1,066.00	29	\$1,740.00	0	\$0.00	--	\$0.00	1	\$875.00	\$3,681.00

Notes:

^a Special waste plans assume the following documents and costs are required - 1) Site health and safety plan at \$700; 2) Site contamination operation plan at \$700; 3) Erosion control plan at \$700; and 4) one final environmental construction report at \$1,700. The total cost for documents described (\$3,800) is apportioned equally between the 4 potential waste properties listed above and assumes the activities will occur during one mobilization. This line item also includes labor, expenses, and equipment for air monitoring field oversight for a time period of approximately 324 days at \$800 per day (\$258,612 total); and is based on an excavation and loading rate of approximately 200 yd³ per day.

^b Material must be managed to a non-special waste disposal facility. Transportation costs are based on a generic 100-mile distance facility and a truck capacity of 14 cubic yards.

^c Although the disposal costs are estimated as a non-special waste, the material may be managed to a CCDD facility or USFO.

^d Disposal Analysis Methods: EPA Methods 1311, 8260B, 8270C, 8081, 8151A, 9045C, 1030, and 9095A.

**Table 5-2 Contaminants of Concern Above TACO Tier 1 Remediation Objectives for Construction Worker Exposure
FAI 90 (Interstate 90), Contract No. 60Y39
Chicago, Harwood Heights, and Norwood Park, Cook County, Illinois**

Site	Boring	Sample Depth Interval (feet)	Contaminant of Concern	Detected Concentration (mg/kg)	TACO Tier 1 Soil RO for Construction Worker Exposure	
					Ingestion (mg/kg)	Inhalation (mg/kg)
ISGS #2746-01 (IDOT ROW)	2746-01-B44	0 - 7	Lead	820	700	---
	2746-01-B56	0 - 8	Lead	3,300		

Key:

mg/kg = Milligrams per kilogram.

RO = Remediation Objective.

TACO = Tiered Approach to Corrective Action Objectives.

ISGS PESA Excerpts

(Only the text portions of the PESA related to the E & E investigation sites are included in this appendix. Disregard any references in the text excerpts to PESA attachments, photographs, figures, and similar types of material, which have not been included in this appendix.)

Site 2746-1 (818/A-1, 1102V2-2, 1104V-10). IDOT ROW, 7200-8900 blocks of 1-90, Chicago (from west of East River Road to west of Harlem Avenue; Attachment 2, pages 1-5). This site is occupied by 1-90 and associated ROW that extends from the west to east project limits. The Chicago Transit Authority (CTA) Blue Line (Site 2746-2) is located in the median of the interstate. During the site inspections, one pole-mounted transformer was noted on this site at the southeast corner of Higgins Road and Cumberland Avenue, and one pole-mounted transformer was noted at the southeast corner of 1-90 and East River Road. Portions of 1-90 are excavated below grade. It is possible that fill may be present in the below-grade excavations. Sources of urban fill are typically unknown, and potential contaminants may be present in fill. Portions of this site are elevated above grade. The composition of the fill used at this site is unknown. This site did not appear on any of the regulatory lists checked for this project.

Aerial photos and Sanborn fire insurance maps indicated that this site was occupied by agricultural, residential, and commercial properties prior to the interstate being constructed. Aerial photos indicate the interstate was constructed between 1951 and 1962.

The following RECs have been identified within this site. Their locations are as described below and as shown on Attachment 2.

- Site 2746-1a (1102V2-2, 1104V-10). This site is located at the interchange of 1-90 and Cumberland Avenue (Attachment 2, page 2).

The following information has been modified from ISGS #1104V:

According to IEPA files reviewed for Site 2746-24 (IEPA#0312465032; Quick Mart 30110), in January 1993, Groundwater Technology, Inc. (GTI), installed a monitoring well (MW-9 on Attachment 10) in the W. Higgins Road ROW along the north side of this site. The well was completed in response to LUST incidents #891536 and #891810 for Site 2746-24. Between 1993 and 1997, groundwater samples were taken by the site consultants GTI, Fugro Midwest, Inc., and ERNS Corporation, and analyzed for BTEX. Groundwater was encountered in this well at depths ranging from 1.5 and 2.5 m (5 and 8.2 ft) bgs. BTEX concentrations in the groundwater were detected below laboratory detection limits. See Site 2746-24 for more information concerning LUST incidents #891536 and #891810.

No monitoring wells were observed during fieldwork for this project.

In soil samples from five soil borings completed at this site for PSI Andrews Engineering report #4 work order #14 in December 2011, metals and SVOCs were detected. No VOCs were detected. See PSI Andrews Engineering report #4 work order #14 for details.

- Site 2746-1b (818/A-1). This site is located at the intersection of 1-90 and Canfield Avenue (Attachment 2, page 4).

The following information has been modified from ISGS #818/A:

A 1950 Sanborn fire insurance map shows a gasoline station at this intersection. A city directory from 1953 listed K&H Service Station at this site (former address 7835 W. Higgins Road). This site was excavated when 1-90 was built. The City of Chicago contained no UST records for this site.

According to CDPH records, one 7,571-liter (2,000-gallon) fuel-oil UST was installed at this site in 1950. No evidence of any USTs were observed during inspections conducted by CDPH in 2011 and 2012. This site does not appear on the UST list. The status and location of this UST are unknown.

In one of two boreholes completed at this site in 1996 for ISGS #818/A, VOCs were detected. See ISGS #818/A for further information.

Potential hazards associated with service stations include waste-oil, lubricants, and transmission fluids; spent solvents; waste paints and thinners; sludge from parts-cleaning tanks; oily sludge from floor sumps; used antifreeze; used lead-acid batteries; and USTs.

No visual evidence of stressed vegetation, pits or depressions, mounding or soil piles, lagoons or surface impoundments, stained soil or pavement, water discoloration, fill, storage tanks (above or underground), pumps or dispensers, protruding pipes, pipelines, drums, monitoring wells, solid waste, non-petroleum chemical use or storage, or unusual or noxious odors was noted at this site during site inspections by ISGS on March 27, March 28, and June 4, 2013.

The following data gaps were identified at this site:

- The composition of the fill used at this site is unknown.
- The status and location of the USTs are unknown.

Because fill may be present, asbestos-containing materials and lead paint may be present at this site.

The following RECs were identified at this site: Possible USTs; potential former chemical use; metals and SVOCs detected in previous PSI testing; VOCs detected in previous ISGS testing; former monitoring well; fill of unknown composition.

The following de minimis conditions were identified at this site: Transformers; potential ACM and lead paint.

Site 2746-2 (1102V2-1, 1104V-11). Chicago Transit Authority tracks, 7200-8900 blocks of 1-90, Chicago (from west of East River Road to west of Harlem Avenue; Attachment 2, pages 1-5). This site is occupied by two "L" tracks for the CTA Blue Line train. This commuter rail line is located in the median of 1-90 (Site 2746-1). A small building was observed between the tracks at the west end of the Cumberland Station platform. This site did not appear on any of the regulatory lists checked for this project.

The following information has been modified from ISGS #1102V2:

On the 1938, 1951, and 1958 aerial photographs, the site was under primarily agricultural use. On the 1959 and 1960 aerial photographs, 1-90 was under construction. By the 1962 aerial photograph, both interstates were present with their medians occupied by vacant land. On the 1963 through 1979 aerial photographs, and 1975 Sanborn fire insurance map, the site was occupied by vacant state-owned ROW. According to the Chicago-L website, this segment of track (the O'Hare extension) was constructed in 1983-1984. A 1987 Sanborn map, and aerial photographs from 1988 and later, show that the site had its current configuration.

No visual evidence of stressed vegetation, pits or depressions, mounding or soil piles, lagoons or surface impoundments, stained soil or pavement, water discoloration, fill, storage tanks (above or underground), pumps or dispensers, protruding pipes, pipelines, drums, monitoring wells, solid waste, transformers, non-petroleum chemical use or storage, or unusual or noxious odors was noted at this site during site inspections by ISGS on March 27, March 28, and June 4, 2013.

No data gaps were identified at this site.

The building on this site may contain friable asbestos-containing materials as a component of floor tiles, wall and pipe insulation, roof materials, patching or painting compounds, ceiling materials, or stove and furnace insulation. Lead paint was banned for residential use in the United States in 1978, but has not been banned for industrial and commercial use. Therefore, lead paint may be present in this building.

No RECs were identified at this site.

The following de minimis conditions were identified at this site: Potential ACM and lead paint.

Site 2746-61. IDOT ROW, 5700 block of N. Canfield Avenue, Chicago intersection of Higgins Road and Canfield Avenue, Chicago (Attachment 2, page 4). This site is occupied by a portion of IDOT ROW.

Aerial photos from 1938 to the present, and Sanborn fire insurance maps from 1949 to 1988, showed this site in its current configuration.

Under the name "ComEd Manhole" and the address "Canfield & Higgins St", this site appears on the BOL list (IEPA#0316105101). Under the name "ComEd" and the address "Canfield & Higgins St", this site appears on the RCRA list (USEPA #ILR0000154948). According to IEPA files, this site registered as a generator of 100-1,000 kg/month (220-2,200 lbs/month) of lead in 2008 due to a clean-out of the manhole on this site. As of 2009, this site no longer generated hazardous waste. No further information was available in IEPA files regarding this site.

No visual evidence of stressed vegetation, pits or depressions, mounding or soil piles, lagoons or surface impoundments, stained soil or pavement, water discoloration, fill, storage tanks (above or underground), pumps or dispensers, protruding pipes, pipelines, drums, monitoring wells, solid waste, transformers, non-petroleum chemical use or storage, or unusual or noxious odors was noted at this site during site inspections by ISGS on March 27, March 28, and June 4, 2013.

No data gaps were identified at this site.

Because there are no buildings present and no evidence of fill or demolition debris was observed, asbestos-containing materials and lead paint are unlikely to be present at this site.

The following REC was identified at this site: Evidence of former chemical use.

No de minimis conditions were identified at this site.

Illinois Department of Transportation

Geoprobe Boring Log Number: 2746-61-B01

PROJECT: **FAI 90 (Interstate 90)**
 SITE LOCATION: **Chicago, Harwood Heights, and
 Norwood Park, Cook County, IL**
 SITE NAME: **ISGS #2746-61, IDOT ROW,
 Contract 60Y39**
 JOB NUMBER: **1009341.0005.02**
 GEOLOGIST: **J. Shuptar**
 LOCATION: **N41.98434213; W87.82319184**

EQUIPMENT: **E & E Geoprobe 5410**
 OPERATOR: **T. Pachowicz**
 SAMPLING METHOD: **Macro Core**
 DATE DRILLED: **2/4/16**
 TOTAL DEPTH: **5 feet**

∇ Water level during drilling, if encountered

Boring continuously sampled using a 2-inch diameter sampler, 4 feet in length.

Soil headspace readings conducted at 2-foot intervals.

DEPTH	GRAPHIC LOG	SOIL DESCRIPTION	REC. (%)	PID Meter Units	SOIL INTERVAL COLLECTED FOR LABORATORY CHEMICAL ANALYSIS
0		FILL: Concrete.	66	0.0	0 to 5-foot depth interval soil sample collected for VOC, SVOC, total TAL metals, TCLP/SPLP TAL metals, pH, and percent solids analyses.
		FILL: Brown, poorly sorted, very fine to coarse sand.			
-5					

ecology and environment, inc.

Summary of Analytical Results

Analytical Data Summary

FB #176-01; IDOT Job #D-91-339-15; Project #P-91-128-12 - Contract 60Y39; WorkOrder #0:

Key to Data Tables

MAC = Maximum Allowable Concentration of Chemical Constituent in
Uncontaminated Soil Used as Fill Material At Regulated Fill Operations

mg/kg = Milligrams per kilogram.

mg/L = Milligrams per liter.

MSA = Metropolitan Statistical Area

TACO = Tiered Approach to Corrective Action Objectives

TCLP = Toxicity Characteristic Leaching Procedure.

SCGIER = Soil Component of the Groundwater Ingestion Exposure Route

SPLP = Synthetic Precipitation Leaching Procedure.

ND = Not detected.

NA = Not analyzed.

J = Estimated value.

U = Analyte was analyzed for but not detected.

R = Rejected.

Criteria Qualifiers and Shading

= pH is less than 6.25 or greater than 9.0 standard units.

† = Concentration exceeds the most stringent MAC.

m = Concentration exceeds the MAC for an MSA.

* = Concentration exceeds the MAC for Chicago corporate limits.

c = Concentration exceeds a TACO Tier 1 RO for the Construction Worker Exposure Route.

L = The detected TCLP/SPLP concentration exceeds the TACO Tier 1 RO for the SCGIER.

W1 = Concentration exceeds the Tier 1 RO for the Groundwater Component of the Groundwater Ingestion Route for Class 1 groundwater.

W1,2 = Concentration exceeds the Tier 1 RO for the Groundwater Component of the Groundwater Ingestion Route for Class 1 and Class 2 groundwater.

 = Concentration exceeds the most stringent MAC, but is below the MAC for an MSA.

 = Concentration exceeds the most stringent MAC and the MAC for Chicago corporate limits.

 = Concentration exceeds applicable comparison criteria.

I. SAMPLE IDENTIFICATION

For the sampling activities for the IDOT - Interstate 90 – WO 005 project, Ecology and Environment, Inc. (E & E) collected the samples listed on Table 1. The samples were analyzed for the methods listed below. Matrix spike/matrix spike duplicates (MS/MSD) were not designated in the field. Samples noted as MS/MSD on Table 1 are provided as batch quality control (QC) MS/MSD. All samples were sent to TestAmerica Laboratory – Chicago, IL for analysis. All other tables are included at the end of this memorandum.

Data were reviewed for field and laboratory precision, accuracy, and completeness in accordance with procedures and quality control (QC) limits. Laboratory data qualifiers for compound identification and quantitation were accepted. Any additional data review qualifiers added are noted below and listed on the tables at the end of this memorandum. Definitions of all data qualifiers are given in the report.

Table 1 Sample Listing

II. SAMPLE PROCEDURES

All samples were collected as specified in the work plan and documented on the chain-of-custody (COC). Samples were analyzed as specified on the COC. Samples were packaged, shipped and received as specified in the work plan. All samples must be received cold (4°+/- 2°C) and in good condition as documented on the Cooler Receipt Forms.

REVIEW RESULTS:

All sample procedures were followed and the sample coolers were received at the appropriate temperature (4 +/-2 C) and in good condition as documented on the Cooler Receipt Forms.

III. LABORATORY DATA

1.0 HOLDING TIMES

Holding times are established and monitored to ensure analytical results accurately represent analyte concentrations in a sample at the time of collection. Exceeding the holding time for a sample generally results in a loss of the analyte due to a variety of mechanisms, such as deposition on the sample container walls or precipitation.

REVIEW RESULTS:

All samples were analyzed within the project-specified holding time.

2.0 BLANKS

Laboratory and field blank samples are analyzed and evaluated to determine the existence and magnitude of possible contamination during the sampling and analysis process. As noted in Table 2 (if applicable), analyte concentrations in the blanks are generally below the practical quantitation limit (PQL). If the analyte is present in the sample at similar trace levels, then the analyte is likely a common background contaminant from some phase of the sampling, extraction, or analytical procedure and associated low level sample concentrations are not considered to be site related. If the analyte concentration is above the PQL, then there is a potential contamination problem and sample results may be biased high or the data unusable.

REVIEW RESULTS:

Blanks were performed at the required frequency. Generally, for sample results less than five times the blank detection, if the sample result was less than the PQL, the MDL was elevated to the sample result; however, if the sample result was greater than the PQL, then the PQL was elevated to the sample result.

Several metals were detected in method blanks by Methods SW6010B, SW6010B_SPLP, SW6010B_TCLP, SW6020A, and organic analytes by Methods SW8260B

and SW8270D were detected below or slightly above the PQL as noted in Table 2. Results were qualified as shown in Table 2A.

For Method SW6010B, calcium was detected in the instrument blank for batch 500-323716; the associated sample results were greater than 10X the blank concentration and were not qualified.

3.0 SURROGATE SPIKE RECOVERY

Laboratory performance for individual samples analyzed for organic compounds is established by means of surrogate spiking activities. Samples are spiked with surrogate compounds prior to preparation and analysis. Unusually low or high surrogate recovery values may indicate some deficiency in the analytical system or that some matrix effects exist, resulting in low or high sample results for target compounds. Sample surrogate recoveries outside QC limits (if applicable) are presented in Table 3. No qualification was made to MS/MSD results for samples with surrogate recoveries outside QC limits.

REVIEW RESULTS:

Surrogate spikes were appropriately added to all field and QC samples and recovered within acceptance criteria except as noted in Table 3. The following surrogate failures were noted for semi-volatile analysis by SW8270D. Many of the samples each had one acid or base/neutral surrogate outside of control limits. A few of the samples each had one acid and one base/neutral surrogate outside of control limits. No qualification of the data was made. Additionally, no qualification of the data was made if the surrogate recovery was outside of acceptance limits due to sample dilution since the surrogate concentrations were diluted as well. A few of the samples each had one acid and two base/neutral surrogates outside of control limits. The sample results were J/UJ qualified if two or more acid or base surrogates were outside of acceptance criteria, and the samples were J/UJ qualified if 3 or more surrogate recoveries were outside of acceptance criteria. Several MS/MSD samples exhibited 3 surrogates outside of acceptance criteria. No qualification was made on the MS/MSD samples, and the associated parent samples did not require qualification.

Sample 2746-01-B46 (0-5) exhibited a high recovery of one the surrogates by Method 8260B. The sample results were all nondetect; therefore, no qualification of the data was made.

4.0 MATRIX SPIKE AND MATRIX SPIKE DUPLICATE ANALYSIS

The matrix spike and matrix spike duplicate (MS/MSD) analyses are intended to provide information about the effects that the sample matrix exerts on the digestion/extraction and measurement methodology. MS recovery values that do not meet laboratory QC criteria may indicate that sample analyte results are being attenuated in the analysis procedure. These results are presented in Table 4 (if applicable). The potential sample bias may be estimated by noting the degree to which the MS concentration was elevated or lowered in the spike analysis. However, this bias should serve only as approximations; sample-specific problems may be the cause of the discrepancy, particularly in soil samples. Recoveries of a post-digestion spike or a laboratory control sample (LCS) are used to verify that the analytical methodology is acceptable and that MS recoveries are due to matrix effects. An MSD analysis is performed to evaluate the precision of the sample results. Precision is measured as the relative percent difference (RPD) between analytical results for duplicate samples. The laboratory's failure to produce similar results for MSD samples may indicate that the samples were non-homogeneous (particularly in soil samples), or that method defects may exist in the laboratory's techniques.

REVIEW RESULTS:

The MS/MSD sample analyses were performed at the required frequency. The recovery and RPD results for MS/MSDs for project samples were within QC criteria established except as noted on Table 4 (batch MS/MSDs performed for other clients' samples were not included in the table).

The MS and /or MSDs for several metals for Methods SW6010B_TCLP, SW6010B, 8270D, and SW6020A exhibited failing recoveries. If the spiking recovery was high and the analyte was not detected in the sample, no qualification of the data was made; however, if there was a positive detection in the parent sample, then the result was J qualified as estimated. If the native concentration in the parent sample was greater than 4X the spiking concentration, or the spiked sample was diluted out, then no qualification of the data was required.

If the spiking recovery was low and the analyte was not detected in the parent, then the parent result was UJ qualified. If the analyte was detected in the parent sample, then the result was J qualified as estimated. 2,4-dinitrophenol, hexachlorocyclopentadiene, pentachlorophenol, and 4,6-dinitro-2-methylphenol exhibited 0% recoveries in many of the MS and MSDs; however, these analytes are poor performing compounds in a multi-parameter spike and were qualified UJ as estimated unless they were rejected for LCS failure as noted in Section 5 (2,4-dinitrophenol results from three batches; qualified UR as nondetects rejected). Boron exhibited a recovery of -12% in the MS of 2746-01-A-B01 (SS). The sample results were qualified UR as rejected non-detect.

For laboratory replicate analysis that failed precision, the results in the parent sample were qualified J as estimated if the RPD did not meet the laboratory limit. No qualification was made on the analytes that exhibited poor precision with sample results that were less than 5X the PQL.

5.0 LABORATORY CONTROL SAMPLE ANALYSIS

The LCS is analyzed to monitor the efficiency of the digestion/extraction procedure and analytical instrument operation. The ability of the laboratory to successfully analyze an LCS demonstrates that there are no analytical problems related to the digestion/sample preparation procedures and/or instrument operations. The LCS results outside QC limits are presented in Table 5 (if applicable). Sporadic and marginal QC failures for multiple component methods do not indicate an analytical concern. If recoveries are high and the compounds are not detected

in the samples, then no data qualification is required. All recoveries should be above 10% or the non-detect results flagged "UR" as rejected.

REVIEW RESULTS:

All LCS analyses were within control limits and performed at the required frequency except as noted on Table 5.

Iron recovered high for LCS 500-321610/2-A by Method SW6010B_TCLP; associated detected sample results were qualified with J as estimated; nondetect results were not qualified.

For Methods SW8260B and SW8270D, several LCS/LCSD recoveries were outside QC limits; the associated sample results were qualified as shown in Table 5. If the recovery was high and the analyte was not detected in the sample, no qualification of the data was made; however, if there was a positive detection in the parent sample, then the result was J qualified as estimated. If the recovery was low, then results were qualified J/UJ as estimated.

2,4-Dinitrophenol was recovered below 10% in two LCSs by Method SW8270D. The analyte is a poor performing compound in a multi-parameter spike. The associated sample results were non-detect and were qualified UR as rejected.

6.0 COMPOUND IDENTIFICATION AND QUANTITATION

Compound identities are assigned by comparing sample compound retention times to retention times from known (standard) compounds and identification of an acceptable mass spectrum. Compounds detected below PQLs in samples should be considered estimated and are qualified "J." The samples with compounds above the linear range were all re-analyzed at a higher dilution factor.

REVIEW RESULTS:

All compound identification and quantitation criteria were achieved as could be determined from the EDD. Samples were diluted to bring the target concentration within the calibration range or due to the nature of the matrix as shown on Table 6. Generally there was no impact to data usability. Sample 2746-01B-B02 (0-3) exhibited elevated reporting limits due to dilution by Method 8270D, and sample 2746-18-B01 (0-8)D exhibited elevated reporting limits due to dilution by Method 8260B. Elevated reporting limits may exceed screening criteria.

For method SW6010B, the continuing calibration verification (CCV) associated with batch 500-322292 recovered high for iron; the associated sample results were nondetects and were not qualified. The initial calibration verification (ICV) associated with batch 500-322494 recovered high for calcium; the associated sample result (only sample 2746-01A-B05 (0-8)) was qualified with a J as estimated.

For Method SW6020A, the low level CCV (CCVL) associated with batch 322858 recovered high for sodium; the sample results associated with this CCVL were at a level that would be unaffected by this excursion and were not qualified. For Method SW6020A, the CCV associated with batch 500-323182 recovered high for antimony; the associated sample results were nondetects and were not qualified. Several CCVs associated with batch 500-323369 recovered high for thallium and antimony. The associated sample results were nondetects and were not qualified.

For method SW8260B, the CCVs associated with batches 500-321853, 500-321546, and 500-323326 recovered high for vinyl acetate as described in the case narrative. The associated sample results were nondetects and were not qualified.

7.0 FIELD DUPLICATE SAMPLE RESULTS

Field duplicate samples were collected and analyzed as an indication of overall precision for both field and laboratory. Field duplicate results are summarized in Table 7 (if applicable). The results are expected to have more variability than laboratory duplicates, which measure only laboratory precision. It is expected also that soil field duplicates will exhibit greater variance than water field duplicates due to the difficulties associated with collecting identical field samples. The QC criteria used to assess field duplicate samples for this project was limits of 70% RPD for soils and 40% RPD for waters, or twice the general laboratory duplicate criteria. If both compounds were below the laboratory PQL or one of the compounds was present as a non-detect, then the compounds are generally not qualified due to field duplicate precision. There are no guidelines regarding data qualification based on poor field duplicate precision. Professional judgment was used to determine whether or not to qualify results.

REVIEW RESULTS:

Ten field duplicates were collected per 201 soil samples. The RPD ratings are listed on Table 7 and were generally “Good”. Several analytes were J qualified as estimated in the field duplicate sample pair due to poor precision.

Table 2 - List of Positive Results for Blank Samples

Method	Sample ID	Samp Type	Analyte	Result	Qual	Anal Type	Units	MDL	PQL

The test results in this report meet all 2003 NELAC and 2009 TNI requirements for accredited parameters, exceptions are noted in this report. This report may not be reproduced except in full, and with written approval from the laboratory. For questions please contact the Project Manager at the e-mail address or telephone number listed on this page.

This report has been electronically signed and authorized by the signatory. Electronic signature is intended to be the legally binding equivalent of a traditionally handwritten signature.

Results relate only to the items tested and the sample(s) as received by the laboratory.

Comments

No additional comments.

Receipt

The samples were received on 1/29/2016 5:10 PM; the samples arrived in good condition, properly preserved and, where required, on ice. The temperatures of the 2 coolers at receipt time were 4.7° C and 5.2° C.

GC/MS VOA

Method(s) 8260B: The continuing calibration verification (CCV) associated with batch 500-321546 recovered above the upper control limit for Vinyl Acetate. The samples associated with this CCV were non-detects for the affected analyte; therefore, the data have been reported. The following samples are impacted: 2746-01-B92 (0-5) (500-106984-1), 2746-01-B92 (5-10) (500-106984-2), 2746-01-B93 (0-5) (500-106984-3), 2746-01-B93 (5-10) (500-106984-4), 2746-01-B94 (0-8) (500-106984-5), 2746-01-B111 (0-8) (500-106984-6), 2746-01-B112 (0-8) (500-106984-7), 2746-01-B110 (0-8) (500-106984-8), 2746-01-B109 (0-8) (500-106984-9), 2746-01-B57 (0-6) (500-106984-10), 2746-01-B56 (0-8) (500-106984-11), 2746-01-B55 (0-8) (500-106984-12), 2746-01-B54 (0-7) (500-106984-13), 2746-01-B54 (7-14) (500-106984-14), 2746-01-B54 (7-14)D (500-106984-15) and 2746-01-B54 (14-20) (500-106984-16).

Method(s) 8260B: The laboratory control sample (LCS) and / or laboratory control sample duplicate (LCSD) for 500-321546 recovered outside control limits for the following analytes: 1,1-Dichloroethene and Vinyl Acetate. These analytes were biased high in the LCS/LCSD and were not detected in the associated samples; therefore, the data have been reported.

No additional analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

GC/MS Semi VOA

Method(s) 8270D: Due to the large number of spiked analytes, there is a high probability that one or more analytes will recover outside acceptance limits. The laboratory's SOP allows for 3 analytes to recover outside criteria for this method when utilizing this list of analytes. The LCS associated with batch preparation batch 500-321513 and analytical batch 500-321559 had 1 analyte outside control limits: 2,4-Dinitrophenol. These results have been reported and qualified.

Method(s) 8270D: The following sample contained one acid and/or base/neutral surrogate outside acceptance limits: 2746-01-B57 (0-6) (500-106984-10). The laboratory's SOP allows one acid and one base/neutral surrogate to be outside acceptance limits; therefore, re-extraction was not performed. These results have been reported and qualified.

No additional analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

Metals

Method(s) 6010B: The laboratory control sample (LCS) for batch preparation batch 500-321479, 500-321480, 500-321479 and 500-321610 and analytical batch 500-321878 recovered outside control limits for the following analyte: Iron. The analyte was biased high in the LCS and were not detected in the associated samples; therefore, the data have been reported.

No additional analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

General Chemistry

No analytical or quality issues were noted, other than those described in the Definitions/Glossary page.

Organic Prep

No analytical or quality issues were noted, other than those described in the Definitions/Glossary page.

Qualifiers

GC/MS VOA

Qualifier	Qualifier Description
*	LCS or LCSD is outside acceptance limits.

GC/MS Semi VOA

Qualifier	Qualifier Description
*	LCS or LCSD is outside acceptance limits.
F1	MS and/or MSD Recovery is outside acceptance limits.
F2	MS/MSD RPD exceeds control limits
J	Result is less than the RL but greater than or equal to the MDL and the concentration is an approximate value.
X	Surrogate is outside control limits

Metals

Qualifier	Qualifier Description
J	Result is less than the RL but greater than or equal to the MDL and the concentration is an approximate value.
B	Compound was found in the blank and sample.
*	LCS or LCSD is outside acceptance limits.
F1	MS and/or MSD Recovery is outside acceptance limits.
F5	Duplicate RPD exceeds limit, and one or both sample results are less than 5 times RL. The data are considered valid because the absolute difference is less than the RL.
4	MS, MSD: The analyte present in the original sample is greater than 4 times the matrix spike concentration; therefore, control limits are not applicable.

Glossary

Abbreviation	These commonly used abbreviations may or may not be present in this report.
α	Listed under the "D" column to designate that the result is reported on a dry weight basis
%R	Percent Recovery
CFL	Contains Free Liquid
CNF	Contains no Free Liquid
DER	Duplicate error ratio (normalized absolute difference)
Dil Fac	Dilution Factor
DL, RA, RE, IN	Indicates a Dilution, Re-analysis, Re-extraction, or additional Initial metals/anion analysis of the sample
DLC	Decision level concentration
MDA	Minimum detectable activity
EDL	Estimated Detection Limit
MDC	Minimum detectable concentration
MDL	Method Detection Limit
ML	Minimum Level (Dioxin)
NC	Not Calculated
ND	Not detected at the reporting limit (or MDL or EDL if shown)
PQL	Practical Quantitation Limit
QC	Quality Control
RER	Relative error ratio
RL	Reporting Limit or Requested Limit (Radiochemistry)
RPD	Relative Percent Difference, a measure of the relative difference between two points
TEF	Toxicity Equivalent Factor (Dioxin)
TEQ	Toxicity Equivalent Quotient (Dioxin)

Client: Ecology and Environment, Inc.

Job Number: 500-106984-1

Login Number: 106984

List Source: TestAmerica Chicago

List Number: 1

Creator: Sanchez, Ariel M

Question	Answer	Comment
Radioactivity wasn't checked or is </= background as measured by a survey meter.	True	
The cooler's custody seal, if present, is intact.	True	
Sample custody seals, if present, are intact.	True	
The cooler or samples do not appear to have been compromised or tampered with.	True	
Samples were received on ice.	True	
Cooler Temperature is acceptable.	True	
Cooler Temperature is recorded.	True	4.7, 5.2
COC is present.	True	
COC is filled out in ink and legible.	True	
COC is filled out with all pertinent information.	True	
Is the Field Sampler's name present on COC?	True	
There are no discrepancies between the containers received and the COC.	True	
Samples are received within Holding Time (excluding tests with immediate HTs)	True	
Sample containers have legible labels.	True	
Containers are not broken or leaking.	True	
Sample collection date/times are provided.	True	
Appropriate sample containers are used.	True	
Sample bottles are completely filled.	True	
Sample Preservation Verified.	True	
There is sufficient vol. for all requested analyses, incl. any requested MS/MSDs	True	
Containers requiring zero headspace have no headspace or bubble is <6mm (1/4").	N/A	
Multiphasic samples are not present.	True	
Samples do not require splitting or compositing.	True	
Residual Chlorine Checked.	N/A

The test results in this report meet all 2003 NELAC and 2009 TNI requirements for accredited parameters, exceptions are noted in this report. This report may not be reproduced except in full, and with written approval from the laboratory. For questions please contact the Project Manager at the e-mail address or telephone number listed on this page.

This report has been electronically signed and authorized by the signatory. Electronic signature is intended to be the legally binding equivalent of a traditionally handwritten signature.

Results relate only to the items tested and the sample(s) as received by the laboratory.

Comments

No additional comments.

Receipt

The samples were received on 2/2/2016 7:45 AM; the samples arrived in good condition, properly preserved and, where required, on ice. The temperatures of the 2 coolers at receipt time were 2.9° C and 3.2° C.

GC/MS VOA

No analytical or quality issues were noted, other than those described in the Definitions/Glossary page.

GC/MS Semi VOA

Method(s) 8270D: The laboratory control sample (LCS) for batch preparation batch 500-321625 and analytical batch 500-321823 recovered outside control limits for 4-Chloroaniline. This analyte was biased high in the LCS and was not detected in the associated samples; therefore, the data have been reported.(LCS 500-321625/2-A)

Method(s) 8270D: The following samples contained one acid and/or one base surrogate outside acceptance limits: 2746-01-B52 (0-6) (500-107010-2), 2746-01-B52 (6-12) (500-107010-3), 2746-01-B49 (6.5-13) (500-107010-9) and (500-107010-E-1-G MSD). The laboratory's SOP allows one acid and/or one base/neutral surrogate to be outside acceptance limits; therefore, re-extraction was not performed. These results have been reported and qualified.

No additional analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

Metals

Method(s) 7470A: Due to a software malfunction, the times at which each sample was analyzed in AD batch 322515 were lost. The times listed in the analytical batch are an approximation. Data results were not affected.

No additional analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

General Chemistry

No analytical or quality issues were noted, other than those described in the Definitions/Glossary page.

Organic Prep

No analytical or quality issues were noted, other than those described in the Definitions/Glossary page.

Qualifiers

GC/MS Semi VOA

Qualifier	Qualifier Description
F1	MS and/or MSD Recovery is outside acceptance limits.
F2	MS/MSD RPD exceeds control limits
*	LCS or LCSD is outside acceptance limits.
J	Result is less than the RL but greater than or equal to the MDL and the concentration is an approximate value.
X	Surrogate is outside control limits

Metals

Qualifier	Qualifier Description
J	Result is less than the RL but greater than or equal to the MDL and the concentration is an approximate value.
B	Compound was found in the blank and sample.
F5	Duplicate RPD exceeds limit, and one or both sample results are less than 5 times RL. The data are considered valid because the absolute difference is less than the RL.
4	MS, MSD: The analyte present in the original sample is greater than 4 times the matrix spike concentration; therefore, control limits are not applicable.

Glossary

Abbreviation	These commonly used abbreviations may or may not be present in this report.
α	Listed under the "D" column to designate that the result is reported on a dry weight basis
%R	Percent Recovery
CFL	Contains Free Liquid
CNF	Contains no Free Liquid
DER	Duplicate error ratio (normalized absolute difference)
Dil Fac	Dilution Factor
DL, RA, RE, IN	Indicates a Dilution, Re-analysis, Re-extraction, or additional Initial metals/anion analysis of the sample
DLC	Decision level concentration
MDA	Minimum detectable activity
EDL	Estimated Detection Limit
MDC	Minimum detectable concentration
MDL	Method Detection Limit
ML	Minimum Level (Dioxin)
NC	Not Calculated
ND	Not detected at the reporting limit (or MDL or EDL if shown)
PQL	Practical Quantitation Limit
QC	Quality Control
RER	Relative error ratio
RL	Reporting Limit or Requested Limit (Radiochemistry)
RPD	Relative Percent Difference, a measure of the relative difference between two points
TEF	Toxicity Equivalent Factor (Dioxin)
TEQ	Toxicity Equivalent Quotient (Dioxin)

Certification Summary

Client: Ecology and Environment, Inc.
Project/Site: IDOT - Interstate 90 - WO 005

TestAmerica Job ID: 500-107010-1

Laboratory: TestAmerica Chicago

Unless otherwise noted, all analytes for this laboratory were covered under each certification below.

Authority	Program	EPA Region	Certification ID	Expiration Date
Illinois	NELAP	5	100201	04-30-16

The following analytes are included in this report, but certification is not offered by the governing authority:

Analysis Method	Prep Method	Matrix	Analyte
6020A	3010A	Solid	Antimony
6020A	3010A	Solid	Thallium
8260B	5035	Solid	1,3-Dichloropropene, Total
Moisture		Solid	Percent Moisture
Moisture		Solid	Percent Solids

Login Number: 107010

List Source: TestAmerica Chicago

List Number: 1

Creator: Scott, Sherri L

Question	Answer	Comment
Radioactivity wasn't checked or is </= background as measured by a survey meter.	True	
The cooler's custody seal, if present, is intact.	True	
Sample custody seals, if present, are intact.	True	
The cooler or samples do not appear to have been compromised or tampered with.	True	
Samples were received on ice.	True	
Cooler Temperature is acceptable.	True	
Cooler Temperature is recorded.	True	2.9,3.2
COC is present.	True	
COC is filled out in ink and legible.	True	
COC is filled out with all pertinent information.	True	
Is the Field Sampler's name present on COC?	True	
There are no discrepancies between the containers received and the COC.	True	
Samples are received within Holding Time (excluding tests with immediate HTs)	True	
Sample containers have legible labels.	True	
Containers are not broken or leaking.	True	
Sample collection date/times are provided.	True	
Appropriate sample containers are used.	True	
Sample bottles are completely filled.	True	
Sample Preservation Verified.	True	
There is sufficient vol. for all requested analyses, incl. any requested MS/MSDs	True	
Containers requiring zero headspace have no headspace or bubble is <6mm (1/4").	N/A	
Multiphasic samples are not present.	True	
Samples do not require splitting or compositing.	True	
Residual Chlorine Checked.	N/A

The test results in this report meet all 2003 NELAC and 2009 TNI requirements for accredited parameters, exceptions are noted in this report. This report may not be reproduced except in full, and with written approval from the laboratory. For questions please contact the Project Manager at the e-mail address or telephone number listed on this page.

This report has been electronically signed and authorized by the signatory. Electronic signature is intended to be the legally binding equivalent of a traditionally handwritten signature.

Results relate only to the items tested and the sample(s) as received by the laboratory.

No additional comments.

Receipt

The samples were received on 2/3/2016 7:10 AM; the samples arrived in good condition, properly preserved and, where required, on ice. The temperatures of the 2 coolers at receipt time were 2.7° C and 3.3° C.

GC/MS VOA

Method(s) 8260B: The continuing calibration verification (CCV) associated with batch 500-321853 recovered above the upper control limit for Vinyl Acetate. The samples associated with this CCV were non-detects for the affected analyte; therefore, the data have been reported. The following samples are impacted: 2746-01-B69 (0-2) (500-107086-1), 2746-01-B70 (0-2) (500-107086-2), 2746-01-B71 (0-8) (500-107086-3), 2746-01-B72 (0-8) (500-107086-4), 2746-01-B73 (0-8) (500-107086-5), 2746-01-B65 (0-8) (500-107086-6), 2746-01-B67 (0-8) (500-107086-7), 2746-01-B68 (0-5) (500-107086-8), 2746-01-B68 (5-10) (500-107086-9), 2746-01-B74 (0-8) (500-107086-10), 2746-18-B01 (0-8) (500-107086-11) and 2746-01-B75 (0-8) (500-107086-13).

Method(s) 8260B: The laboratory control sample (LCS) for batch 500-321853 recovered outside control limits for the following analyte: Vinyl Acetate. This analyte was biased high in the LCS and was not detected in the associated samples; therefore, the data have been reported.

Method(s) 8260B: The following sample was diluted due to the abundance of non-target analytes: 2746-18-B01 (0-8)D (500-107086-12). Elevated reporting limits (RLs) are provided.

No additional analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

GC/MS Semi VOA

Method(s) 8270D: The following samples contained one surrogate outside acceptance limits: 2746-01-B74 (0-8) (500-107086-10), 2746-18-B01 (0-8) (500-107086-11) and 2746-18-B01 (0-8)D (500-107086-12). The laboratory's SOP allows one acid and one base surrogate to be outside acceptance limits; therefore, re-extraction was not performed. These results have been reported and qualified.

No additional analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

Metals

No analytical or quality issues were noted, other than those described in the Definitions/Glossary page.

General Chemistry

No analytical or quality issues were noted, other than those described in the Definitions/Glossary page.

Organic Prep

No analytical or quality issues were noted, other than those described in the Definitions/Glossary page.

TestAmerica Job ID: 500-107086-1

Qualifiers

Metals

Qualifier	Qualifier Description
B	Compound was found in the blank and sample.
J	Result is less than the RL but greater than or equal to the MDL and the concentration is an approximate value.
F1	MS and/or MSD Recovery is outside acceptance limits.
F2	MS/MSD RPD exceeds control limits
F3	Duplicate RPD exceeds the control limit
F5	Duplicate RPD exceeds limit, and one or both sample results are less than 5 times RL. The data are considered valid because the absolute difference is less than the RL.
4	MS, MSD: The analyte present in the original sample is greater than 4 times the matrix spike concentration; therefore, control limits are not applicable.

Glossary

Abbreviation	These commonly used abbreviations may or may not be present in this report.
α	Listed under the "D" column to designate that the result is reported on a dry weight basis
%R	Percent Recovery
CFL	Contains Free Liquid
CNF	Contains no Free Liquid
DER	Duplicate error ratio (normalized absolute difference)
Dil Fac	Dilution Factor
DL, RA, RE, IN	Indicates a Dilution, Re-analysis, Re-extraction, or additional Initial metals/anion analysis of the sample
DLC	Decision level concentration
MDA	Minimum detectable activity
EDL	Estimated Detection Limit
MDC	Minimum detectable concentration
MDL	Method Detection Limit
ML	Minimum Level (Dioxin)
NC	Not Calculated
ND	Not detected at the reporting limit (or MDL or EDL if shown)
PQL	Practical Quantitation Limit
QC	Quality Control
RER	Relative error ratio
RL	Reporting Limit or Requested Limit (Radiochemistry)
RPD	Relative Percent Difference, a measure of the relative difference between two points
TEF	Toxicity Equivalent Factor (Dioxin)
TEQ	Toxicity Equivalent Quotient (Dioxin)

Job Number: 500-107086-1

Login Number: 107086

List Source: TestAmerica Chicago

List Number: 1

Creator: Scott, Sherri L

Question	Answer	Comment
Radioactivity wasn't checked or is \leq background as measured by a survey meter.	True	
The cooler's custody seal, if present, is intact.	True	
Sample custody seals, if present, are intact.	True	
The cooler or samples do not appear to have been compromised or tampered with.	True	
Samples were received on ice.	True	
Cooler Temperature is acceptable.	True	
Cooler Temperature is recorded.	True	3.3.2.7
COC is present.	True	
COC is filled out in ink and legible.	True	
COC is filled out with all pertinent information.	True	
Is the Field Sampler's name present on COC?	True	
There are no discrepancies between the containers received and the COC.	True	
Samples are received within Holding Time (excluding tests with immediate HTs)	True	
Sample containers have legible labels.	True	
Containers are not broken or leaking.	True	
Sample collection date/times are provided.	True	
Appropriate sample containers are used.	True	
Sample bottles are completely filled.	True	
Sample Preservation Verified.	True	
There is sufficient vol. for all requested analyses, incl. any requested MS/MSDs	True	
Containers requiring zero headspace have no headspace or bubble is <math><6\text{mm}</math> (1/4").	N/A	
Multiphasic samples are not present.	True	
Samples do not require splitting or compositing.	True	
Residual Chlorine Checked.	N/A

The test results in this report meet all 2003 NELAC and 2009 TNI requirements for accredited parameters, exceptions are noted in this report. This report may not be reproduced except in full, and with written approval from the laboratory. For questions please contact the Project Manager at the e-mail address or telephone number listed on this page.

This report has been electronically signed and authorized by the signatory. Electronic signature is intended to be the legally binding equivalent of a traditionally handwritten signature.

Results relate only to the items tested and the sample(s) as received by the laboratory.

Narrative

Job Narrative 500-107169-1

Comments

No additional comments.

Receipt

The samples were received on 2/3/2016 4:45 PM; the samples arrived in good condition, properly preserved and, where required, on ice. The temperatures of the 2 coolers at receipt time were 4.4° C and 4.6° C.

GC/MS VOA

Method(s) 8260B: The laboratory control sample (LCS) and laboratory control sample duplicate (LCSD) for 322736 recovered outside control limits for the following analyte: Chloroethane. This analyte was biased high in the LCS and was not detected in the associated samples; therefore, the data has been reported.

No additional analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

GC/MS Semi VOA

Method(s) 8270D: The following sample contained one acid surrogate and/or one base/neutral surrogate outside acceptance limits: 2746-01-B83 (0-8) (500-107169-11) and 2746-01-B86 (6-12) (500-107169-19). The laboratory's SOP allows one acid and one base/neutral surrogate to be outside acceptance limits; therefore, re-extraction was not performed. These results have been reported and qualified.

No additional analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

Metals

Method(s) 6010B: The continuing calibration verification (CCV) associated with batch 500-322292 recovered above the upper control limit for Iron. The samples associated with this CCV were non-detects for the affected analyte; therefore, the data have been reported. The following samples are impacted: 2746-01A-B05 (0-8) (500-107169-1), 2746-01A-B04 (0-8) (500-107169-2) and 2746-01A-B03 (0-8) (500-107169-3).

Method(s) 6010B: The initial calibration verification (ICV) result for batch 500-322494 was outside of control limits for Calcium. All other QC, including bracketing continuing calibration verification (CCV) solutions were within control limits. The data have been reported.

No additional analytical or quality issues were noted, other than those described above or in the Definitions/Glossary page.

General Chemistry

No analytical or quality issues were noted, other than those described in the Definitions/Glossary page.

Organic Prep

No analytical or quality issues were noted, other than those described in the Definitions/Glossary page.

Qualifiers

GC/MS VOA

Qualifier	Qualifier Description
*	LCS or LCSD is outside acceptance limits.
*	LCS or LCSD is outside acceptance limits.
J	Result is less than the RL but greater than or equal to the MDL and the concentration is an approximate value.

GC/MS Semi VOA

Qualifier	Qualifier Description
F1	MS and/or MSD Recovery is outside acceptance limits.
J	Result is less than the RL but greater than or equal to the MDL and the concentration is an approximate value.
J	Result is less than the RL but greater than or equal to the MDL and the concentration is an approximate value.
X	Surrogate is outside control limits

Metals

Qualifier	Qualifier Description
F1	MS and/or MSD Recovery is outside acceptance limits.
F2	MS/MSD RPD exceeds control limits
B	Compound was found in the blank and sample.
J	Result is less than the RL but greater than or equal to the MDL and the concentration is an approximate value.
^	ICV,CCV,ICB,CCB, ISA, ISB, CRI, CRA, DLCK or MRL standard: Instrument related QC is outside acceptance limits.
F3	Duplicate RPD exceeds the control limit
F5	Duplicate RPD exceeds limit, and one or both sample results are less than 5 times RL. The data are considered valid because the absolute difference is less than the RL.
4	MS, MSD: The analyte present in the original sample is greater than 4 times the matrix spike concentration; therefore, control limits are not applicable.
B	Compound was found in the blank and sample.
J	Result is less than the RL but greater than or equal to the MDL and the concentration is an approximate value.
^	ICV,CCV,ICB,CCB, ISA, ISB, CRI, CRA, DLCK or MRL standard: Instrument related QC is outside acceptance limits.

Glossary

Abbreviation	These commonly used abbreviations may or may not be present in this report.
□	Listed under the "D" column to designate that the result is reported on a dry weight basis
%R	Percent Recovery
CFL	Contains Free Liquid
CNF	Contains no Free Liquid
DER	Duplicate error ratio (normalized absolute difference)
Dil Fac	Dilution Factor
DL, RA, RE, IN	Indicates a Dilution, Re-analysis, Re-extraction, or additional Initial metals/anion analysis of the sample
DLC	Decision level concentration
MDA	Minimum detectable activity
EDL	Estimated Detection Limit
MDC	Minimum detectable concentration
MDL	Method Detection Limit
ML	Minimum Level (Dioxin)
NC	Not Calculated
ND	Not detected at the reporting limit (or MDL or EDL if shown)
PQL	Practical Quantitation Limit
QC	Quality Control
RER	Relative error ratio
RL	Reporting Limit or Requested Limit (Radiochemistry)
RPD	Relative Percent Difference, a measure of the relative difference between two points
TEF	Toxicity Equivalent Factor (Dioxin)
TEQ	Toxicity Equivalent Quotient (Dioxin)
