

the girder.) Proposed exceptions must be approved by

The Engineer may adjust dimension "i" to meet the above condition and to keep the sign level.

locate primary reinforcement and space holes to miss by 6", min. Minimize spalling and concrete fracturing/damage during field drilling of existing concrete. Spalls over ${}^{l}_{4}$ ' deep or beyond the coverage of the 4x4 plate washer shall be repaired with epoxy mortar before installing washer.

(4) For attachment details of 3^{l}_{2} " pipe and W10x22, see other sections as applicable.

- For bridge mounted sign structures installed on new bridges with railing, during design, bracket spacing must be coordinated with railing post spacing and the Contractor must install upper brackets prior to railing installation. For bridge mounted sign structures installed on existing bridges with railing, during design, brackets spacing must be coordinated with railing post spacing and the Contractor must temporarily remove sections of railing to facilitate upper bracket installation. If it is determined during design that existing railings can't be removed, alternate upper connection details must be developed for the contract plans and approved by the Bureau of Bridges and Structures.
