SECTION A-A

Note:
 Two hardened washers required for each set of oversized holes.
 *Alternate C15x50 channels are permitted to facilitate material acquisition. Calculated weight of structural steel is based on the lighter section.
 The alternate, if utilized, shall be provided at no additional cost to the Department.

**3/4" ϕ HS bolts, 1/8" ϕ holes in beam web and connection angle, EXCEPT for diaphragms between beams 3 & 4 use 1/8" x 1/8" vertical slotted holes in connection angle, and provide 3"x3"x3/16" \square washers over slotted holes.

- Notes:**
- All structural steel shall be AASHTO M270 Grade 50W.
 - Load carrying components designated "NTR" shall conform to the Supplemental Requirements for Notch Toughness, Zone 2.
 - All cross frames or diaphragms shall be installed as steel is erected and secured with erection pins and bolts except as otherwise noted. Individual cross frames or diaphragms at supports may be temporarily disconnected to install bearing anchor rods.
 - For Stage II Construction, diaphragms between Beam 3 & 4 shall be installed with bolts at both beams only finger-tight and with slots positioned to allow maximum differential deflection the deck pour. Bolts shall be fully tightened as soon as possible after deck pour to minimize differential deflections due to traffic.
