WATERWAY INFORMATION

Drainage Area: 107 Sq. Miles
Character: Rolling, clay, cultivated ℄ Residential.
Required Opening: 882 Sq. Ft. based on 50yr flood.
Proposed effective bridge opening: 882 Sq. Ft.

DESIGN STRESSES

Reinforced Concrete:
f'c = 3500 p.s.i.
fs = 20,000 p.s.i.
n = 10
Ec = 1400 p.s.i. (Except Footings)
Ec = 1000 p.s.i. (Footings)
Kc = 90 p.s.i. (Except Footings)
Kc = 75 p.s.i. (Footings)
Structural Steel:
fs = 20,000 p.s.i.
Maximum Foundation Pressure:
3 Tons per sq. ft.
Loading: HS-20-44

SHEET NO. 1
9 SHEETS

GENERAL NOTES

Coarse aggregate used in parapets and end posts must be free of chert, flint, limonite, lignite and soft sandstone.

The concrete floor slab shall be finished in accordance with Article 51.19 of the Standard Specifications.

Rivets ¾" ϕ, open holes 13/16" ϕ unless noted.

All rockers, bolsters, bearing plates, lead plates, pintles, and anchor bolts shall be fabricated and set in accordance with Article 51.15 of the Standard Specifications and are included in quantity of Structural Steel.

Anchor Bolts shall be set before connecting diaphragms over support. Space reinforcing to miss anchor bolts.

Expansion guards shall be fabricated and erected in accordance with Article 51.13(d) of the Standard Specifications and are included in quantity of Structural Steel.

Except as otherwise provided all Structural Steel shall receive one shop coat of red lead paint and two field coats of aluminum paint. See Articles 56.1 to 56.5 inclusive of the Standard Specifications.

All surfaces of expansion guards inaccessible after erection shall be given two shop coats of red lead paint. The ¾" ϕ welded studs shall not be painted.

The Contractor shall drive two (2) test piles in permanent locations as directed by the Engineer before ordering remainder of piles. The test piles shall be located as follows:

Steel: One each at North and South Abuts.

No rock larger than 3" shall be placed in fills in the area where piles are to be driven.

All Structural Steel shall be A 36 Steel.

All welding as shown shall be by the electric arc process and shall comply with the requirements of the Standard Specifications for welded Highway and Railway Bridges, 1956, of the American Welding Society.

Permanent forms will not be permitted in forming the concrete floor slab.

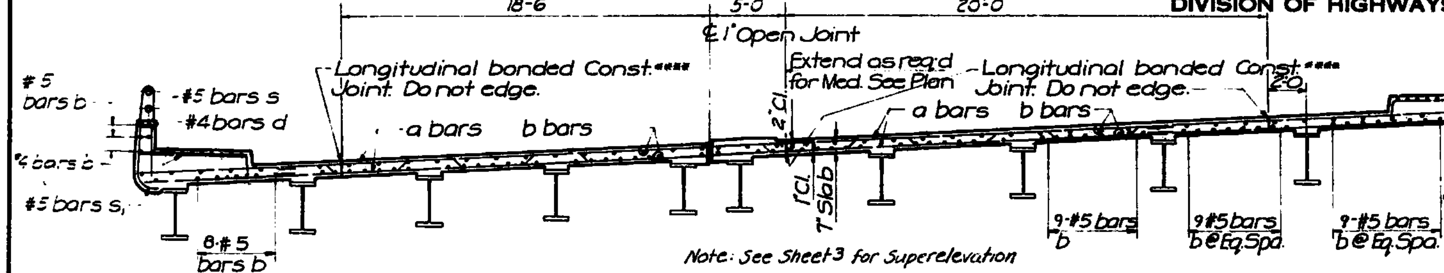
DEPARTMENT OF PUBLIC WORKS & BUILDINGS
DIVISION OF HIGHWAYS

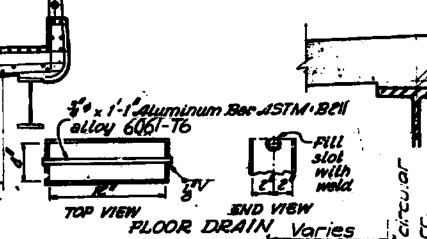
**** Longitudinal reinforcing shall not cross longitudinal joint.



CROSS SECTION
Thru Center Span

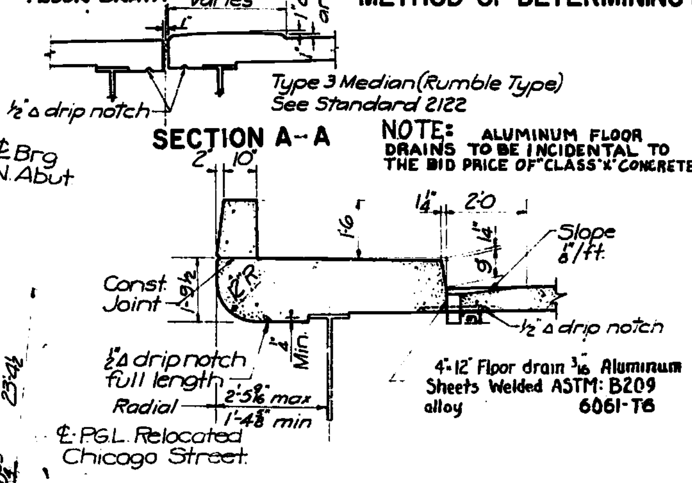
Note: Median portion to be made in a separate pour and to be Type 3 (modified for width) constructed in accordance with Illinois Standard 2122.

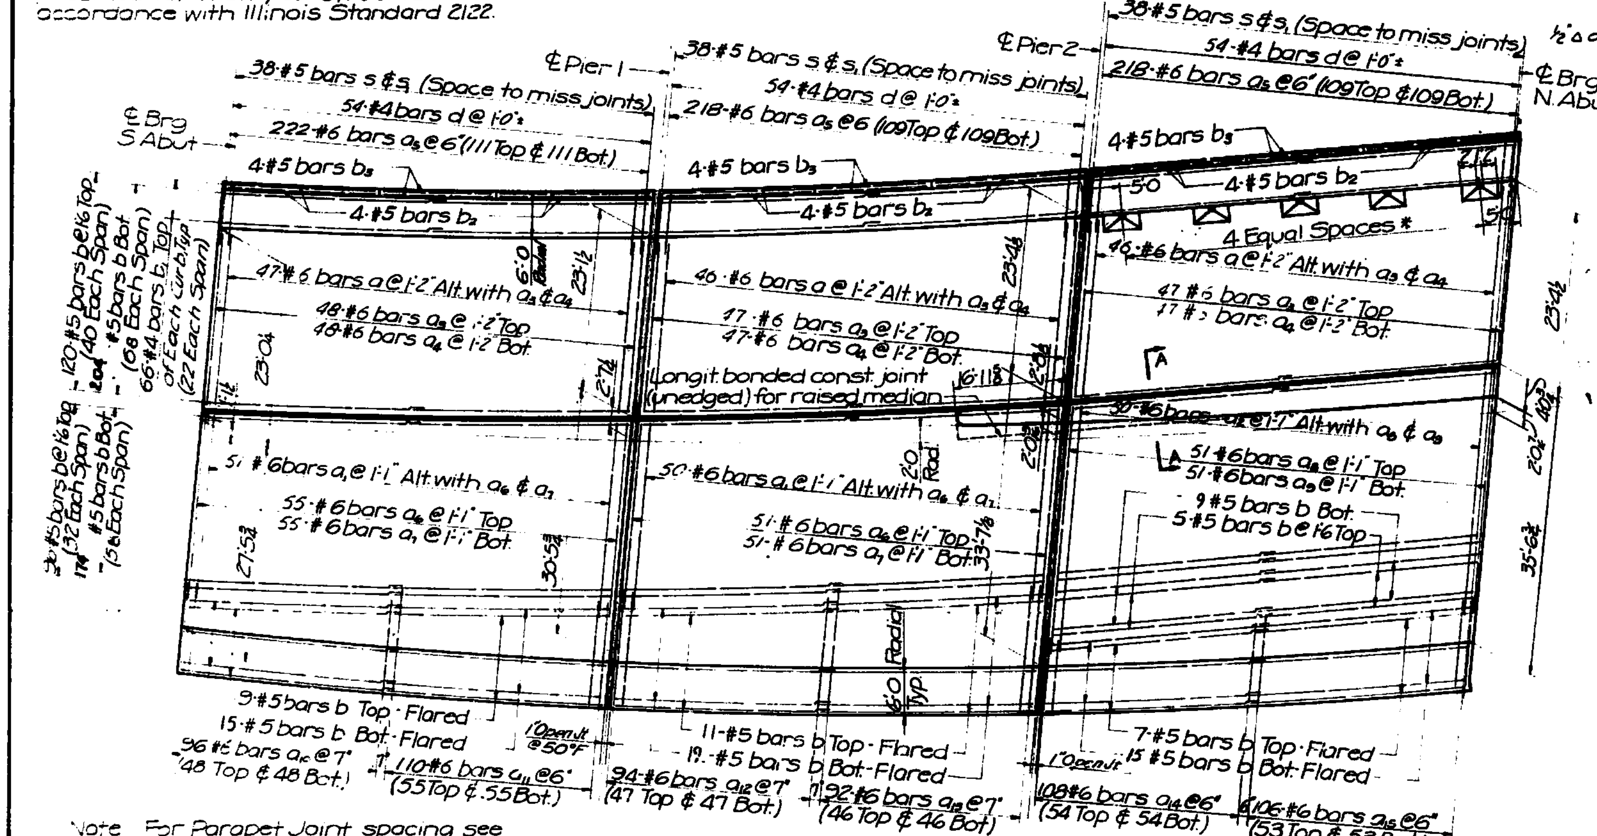
Note: Place 2 additional s bars inside face of parapet at each rail post. For post spacing see Sheet 5.



After all structural steel has been erected elevations of the top flanges of the beams shall be taken at intervals shown on D.L. Deflection Diagram. From these elevations subtract the increment of deflection for these points determined from the D.L. Deflection Diagram. The elevations so attained subtracted from the theoretical grade elevations minus floor thickness equals the fillet heights above tops of beams.

METHOD OF DETERMINING FILLET HEIGHT "t"





Note: For Parapet Joint spacing see Sheet 5.
Curb and Parapet Reinforcing shown is the same for both curbs.
Transverse bar spacing is measured perpendicular to ℄s of brgs.
For Expansion Guard detail see sheet 4.

PLAN

* Floor Drain spacing typical for all spans along West edge of rdwy.

NOTES:

All Posts shall be normal to parapet.
All Posts shall be malleable cast iron conforming to ASTM A-47, Grade 35018, galvanized to ASTM A-153.
All Rail Tubing shall conform to applicable requirements of ASTM A-53, Grade B, (pipe or tube) galvanized to ASTM A-120.
For material composition of Fabric Bearing Pad, see Special Provisions.

Provide 1-⅛" and 2-1/16" galvanized sheet steel shims for 25% of the Posts. Rail element shall be parallel to Grade—high spots shall be ground and low spots shimmed.
If any of the galvanizing coat is damaged or removed during erection, the affected area shall be painted with one coat of zinc paint in accordance with Military Specification MIL-P-26915 Type 1, air-dry cure.
See Special Provisions for following Material Specifications:
Stainless Steel Cap Screws, Stainless Steel Bars and Stainless Steel Washer.

METHOD of MEASUREMENT: Metal handrail shall be measured in lineal feet. The length paid for shall be the overall length along the top longitudinal railing member through all posts and gaps.

BASIS of PAYMENT: Metal handrail will be paid for at the contract unit price per lineal for METAL HANDRAIL, measured as specified, which price shall be payment in full for all materials, fabrication, transportation and erection.

Cost of rail splice, end caps and hardware to be incidental to Item METAL HANDRAIL.

GENERAL NOTES

Fasteners shall be high strength bolts.
Bolts 3/4" ø, open holes 15/16" ø, unless otherwise noted.

The first two coats of the Lead and Chromate free Alkyd Paint System shall be used for shop and field painting of new structural steel.

Structural steel shall only be cleaned and painted as required by the special provision "Cleaning and Painting New Steel and Adjacent Areas of Existing Steel Structures".

Field welding of construction accessories will not be permitted to the bottom flange of beams. Field welding in other areas will be permitted only when approved by the Engineer.

Anchor bolts shall be set before bolting diaphragms ~~(bolting cross frames)~~ over supports.

Reinforcement bars shall conform to the requirements of AASHTO M-31, M-42 or M-53 Grade 60.

Shoulder transition to wingwall shall be shaped with broken concrete. Cost incidental.

Plan dimensions and details relative to existing structure have been taken from existing plans and are subject to nominal construction variations. It shall be the Contractor's responsibility to verify such dimensions and details in the field and make necessary approved adjustments prior to construction or ordering of materials. Such variation shall not be cause for additional compensation or a change in the scope of the work, however, the Contractor will be paid for the quantity actually furnished at the unit price bid for the work.

Prior to pouring the new concrete for the deck, all loose rust , loose mill scale, loose paint and all other foreign material shall be removed from the embedded portions of the flanges of stringers(girders). The removal shall be accomplished in accordance with the requirements of the SSPC Surface Preparation Specifications SP7 for Brush-Off Blast Cleaning Cost shall be incidental to concrete removal.

Existing name plates shall be salvaged and relocated as directed by the Engineer.

The Contractor will be required to mark on top of the concrete deck the locations of the top flange of all the steel beams of girders, prior to any removal of the bridge concrete deck. Saw cutting directly over the top of the beams or girder flanges is not permitted.

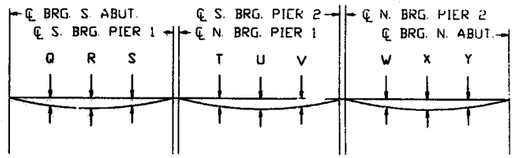
PLAN

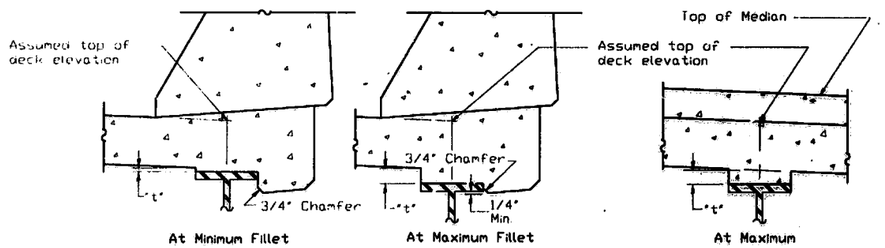


DEAD LOAD DEFLECTION DIAGRAM

(Includes weight of concrete only)

Note: The above deflections are not to be used in the field if the engineer is working from the grade elevations adjusted for dead load deflections as shown on the following sheets.

BEAM NUMBERS	DEAD LOAD DEFLECTION IN INCHES								
	Q	R	S	T	U	V	W	X	Y
1 & 11	5/16	1/2	3/8	3/8	9/16	3/8	3/8	9/16	3/8
2, 3 & 4	7/16	5/8	1/2	1/2	11/16	1/2	7/16	5/8	1/2
5 & 6	3/8	9/16	3/8	7/16	5/8	7/16	3/8	1/2	3/8
7, 8 & 9	1/2	11/16	1/2	1/2	3/4	1/2	1/2	11/16	1/2
10	3/8	9/16	3/8	7/16	9/16	7/16	1/2	11/16	1/2



FILLET HEIGHTS

To determine "t": After all structural steel has been erected, elevations of the top flanges of the beams shall be taken at intervals shown below. These elevations subtracted from the "Theoretical Grade Elevations Adjusted for Dead Load Deflection" shown on the following sheets, minus slab thickness, equals the fillet heights "t" above top flange of beams.

Notes:

ALL dimensions to be verified in field.

ALL contact surfaces of joints for the new diaphragms shall be free of paint or lacquer.

Hardended washers shall be required over all 15/16" ø holes.

No flame cutting of the beam web will be allowed. Only drilling will be allowed for bolt holes.

STAGE I

After removal of existing concrete deck, attach new diaphragms to existing beams using 3/8" bent plates. Attach only to beam line ⑤. Do not attach to or drill holes in webs of beam line ⑥.

STAGE II

Prior to the removal of the concrete deck drill holes in existing beam webs and attach new diaphragms using 3/8" bent plates. Local concrete removal at the new diaphragms may be necessary to facilitate construction. Check all bolts for proper tightness and then proceed with deck removal and Stage II Reconstruction.

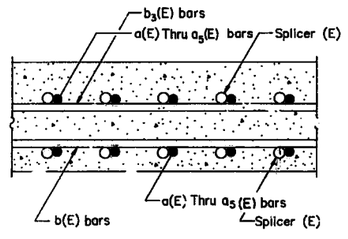
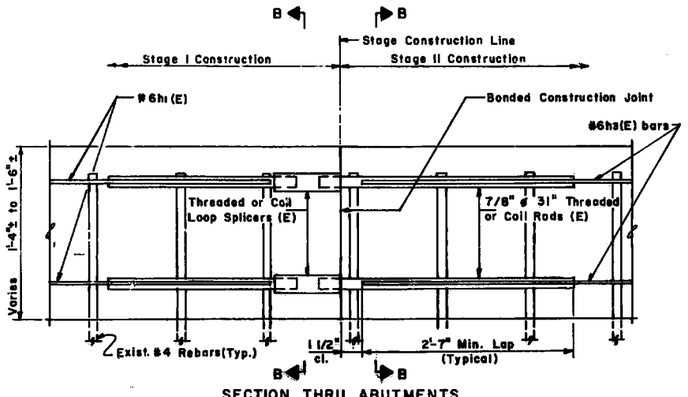
SECTION THRU SLAB



SECTION A-A

SPLICER DETAILS

Cost incidental to Reinforcement Bars (Epoxy Coated).

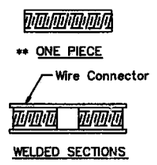


SECTION THRU ABUTMENTS
8 REQ'D

The diameter of this part of Splicer is the same as the diameter of the bar spliced.

The diameter of this part is equal or larger than the diameter of bar spliced.

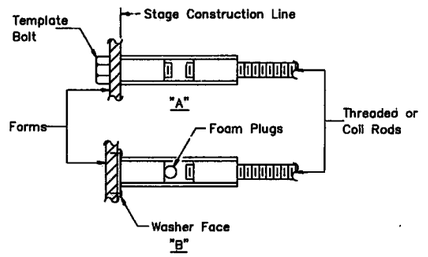
ROLLED THREAD DOWEL BAR



WELDED SECTIONS

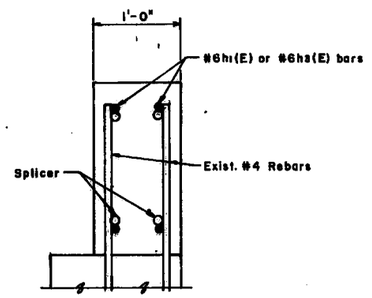
SPLICER ALTERNATIVES

** Heavy Hex Nuts conforming to ASTM A 563, Grade C, D or DH may be used.



INSTALLATION AND SETTING METHODS

"A" : Set splicer by means of a template bolt.
"B" : Set splicer by nailing to wood forms or cementing to steel forms.
(E) : Indicates epoxy coating.



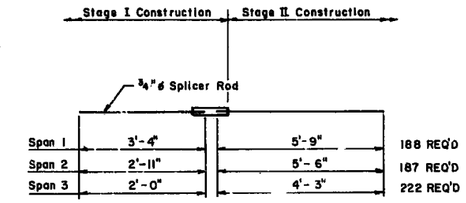
SECTION B-B
SPLICER DETAILS

Cost incidental to Reinforcement Bars (Epoxy Coated)

NOTES

1. Steel Splicer (Coupler) assembly shall be of an approved type and shall develop in tension at least 125 percent of the yield strength of the lapped reinforcement bars.
2. Steel Splicer rods shall be of minimum 60 ksi yield strength, threaded or coiled full length and have effective tensile stress area equal to or greater than that of the lapped reinforcement bars.
3. All reinforcement bars shall be lapped and tied to the splicer rods.
4. Splicer (coupler) assembly in the slab shall be epoxy coated in accordance with the requirements for reinforcement bars.
5. Other systems of similar design may be submitted to the Engineer for approval. Approval shall be based on certified test results from an approved testing laboratory that the proposed splicer (coupler) assembly satisfies the following requirements:
   - ① Minimum Capacity (Tension in kips) = $1.25 \times f_y \times A_t$
   - ② Minimum *Pull-out Strength (Tension in kips) = $1.25 \times fs_{allow} \times A_t$

   Where f_y = Yield strength of lapped reinforcement bars in ksi.
   fs_{allow} = Allowable tensile stress in lapped reinforcement bars in ksi (Service Load)
   A_t = Tensile stress area of lapped reinforcement bars.
   * = 28 day concrete
6. Typical Splicer (Coupler) Assembly Sizes:
   - In Slabs: #5 bar lap with 3/4"ø Splicer (Coupler) x 2'-0" Splicer Rods — Minimum Capacity = 23.0 kips-tension; Minimum Pull-out Strength = 9.2 kips-tension
   - In Sub-Structure: #7 bar lap with 1"ø Splicer (Coupler) x 3'-5" Splicer Rods — Minimum Capacity = 45.1 kips-tension; Minimum Pull-out Strength = 18.0 kips-tension
   - In Sub-Structure: #6 bar lap with 7/8"ø Splicer (Coupler) x 2'-7" Splicer Rods — Minimum Capacity = 33.1 kips-tension; Minimum Pull-out Strength = 13.2 kips-tension



SPLICER (COUPLER) ASSEMBLY

Cost of ¾"ø & ⅞"ø Splicer Rod shall be incidental to Reinforcement Bars (Epoxy Coated)

For Location see Deck Plan-Reinf. & Abutments-Reconstruction.

Notes:
Hollow structural steel tubing shall conform to the requirements of ASTM designation A500 Grade B, or A501 Structural Steel Tubing.
All other shapes, plates and bars shall conform to the requirements of AASHTO M183.
Bolts, studs, washers and nuts shall conform to the requirements of ASTM A307.
The Grate, Frame and Downspout shall be galvanized after shop fabrication in accordance with AASHTO M111 & ASTM A385.
All bolts, washers and nuts shall be galvanized in accordance with AASHTO M232.
Cost of the Grate, Frame, Downspout, Bolts, Washers and Nuts including complete installation of Scupper will be paid for at the unit bid price for "DRAINAGE SCUPPERS SPECIAL."

LICENSED STRUCTURAL ENGINEER — STEPHEN E. ALSBURY 081-5261 — STATE OF ILLINOIS

I hereby certify that these plans were prepared by me or under my direct personal supervision and that I am a duly licensed structural engineer under the laws of the State of Illinois.

DATE: 08-13-2014

Stephen E. Alsbury S.E. #5261
LICENSE EXP. 11-30-2014
Applies to sheets 8-19 of 26

LOADING HS20-44

(Existing Construction)

DESIGN SPECIFICATIONS

2002 Standard Specifications for Highway Bridges 17th Edition

DESIGN STRESSES

FIELD UNITS

(NEW CONSTRUCTION)

f'c = 3,500 psi
fy = 60,000 psi (Reinforcement)

GENERAL NOTES

Plan dimensions and details relative to existing plans are subject to nominal construction variations. The Contractor shall field verify existing dimensions and details affecting new construction and make necessary approved adjustments prior to construction or ordering of materials. Such variations shall not be cause for additional compensation for a change in scope of the work, however, the Contractor will be paid for the quantity actually furnished at the unit price bid for the work.

Reinforcement bars designated (E) shall be epoxy coated.

Existing reinforcement bars extending into the removal area shall be cleaned, straightened and incorporated into new construction. Any reinforcement bars that are damaged during concrete removal shall be replaced with an approved bar splicer or anchorage system. Cost included with Concrete Removal.

Joint openings shall be adjusted according to Article 520.04 of the Std. Specs. when the deck is poured at an ambient temperature other than 50° F.

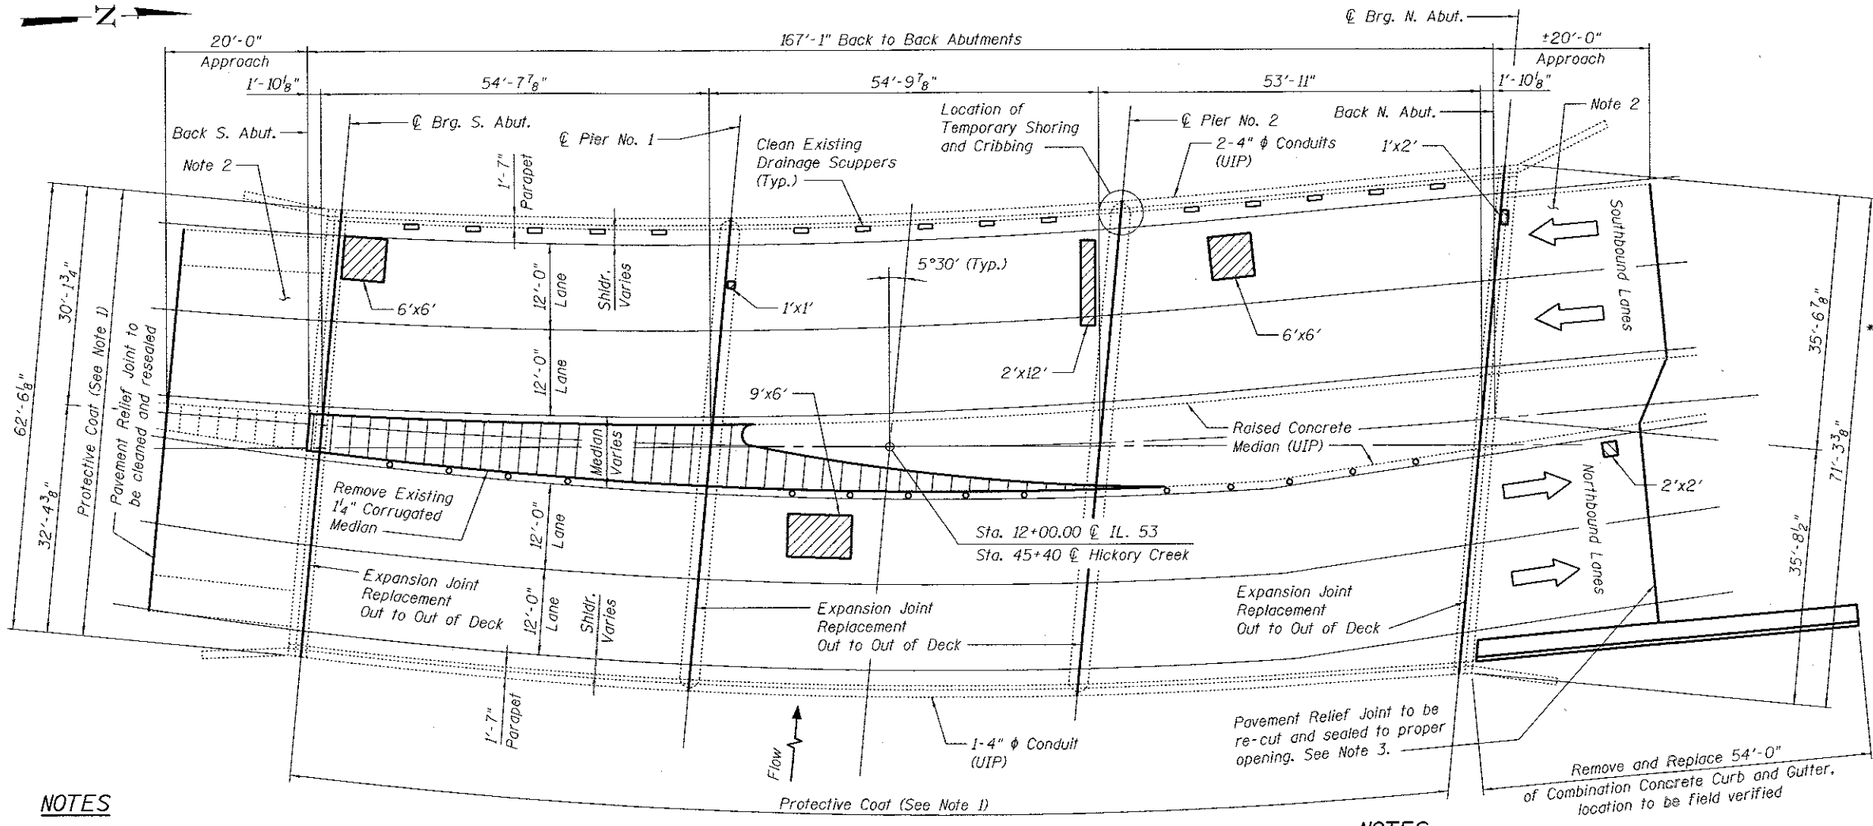
Cost of removal and disposal of existing abandoned conduits at abutments included with Concrete Removal.

All existing conduits shall remain and be protected as required (unless otherwise noted).

LEGEND

Partial Depth Bridge Deck Repair. (For Information Only)

Partial Depth Approach Slab Repair



PLAN

NOTES

1. Limits of Protective Coat are: tops and roadway faces of parapets, raised median and corrugated median.
2. Overlay North and South Approaches with HMA to proposed elevation of Bridge Deck Overlay.
3. Cost of re-cutting relief joint is included with Clean and Reseal Relief Joint.

* See sheet 19A of 26 for details.
** See sheets 12 and 19A of 26 for details.

NOTES

The limits and locations of the repairs shown are taken from the most recent survey performed by the District on August 31, 2010.

UIP = Use in Place

Concrete Removal

NOTES

Removal of the existing expansion joints will not be paid for separately but shall be included in the cost for Concrete Removal.

Hatched areas indicate concrete sections to be removed. Care shall be exercised by the contractor during and following concrete removal to ensure the existing reinforcement remaining in place is not damaged. All existing reinforcing to be incorporated into into new construction shall be blast-cleaned, straightened and properly positioned prior to concrete placement. Any reinforcement damaged during concrete removal shall be repaired or replaced using an approved Mechanical Bar Splicer System. Cost of removal shall be included with pay item for Concrete Removal. Cost of replacement shall be included with pay item for Concrete Superstructure.

Parapets and medians shall be removed and replaced within the limits of hatched areas shown. All longitudinal parapet and median reinforcement shall remain in place.

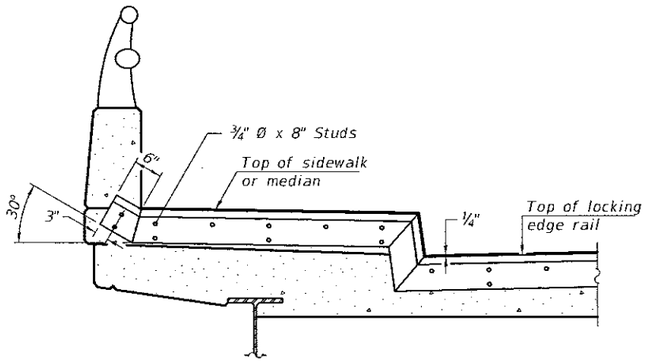
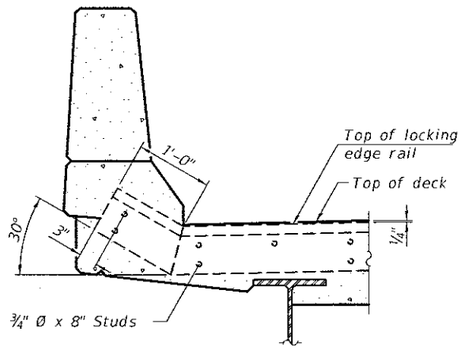
SECTION C-C

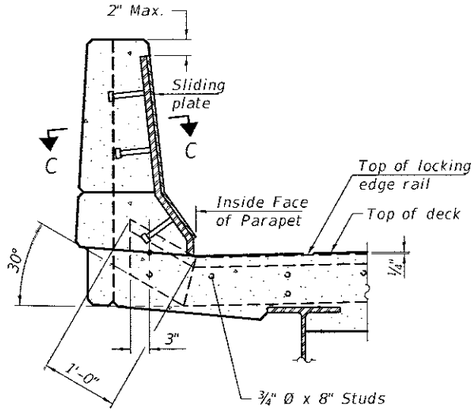


TYPICAL END TREATMENT AT SIDEWALK OR MEDIAN

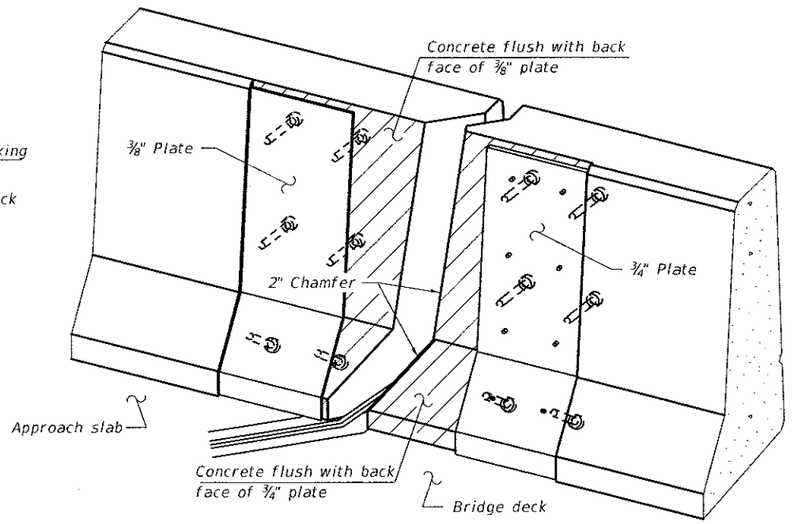
Shorter plates with a single row of studs at 12" cts. may be necessary on medians which are shallower than 9". See manufacturer's recommendation.



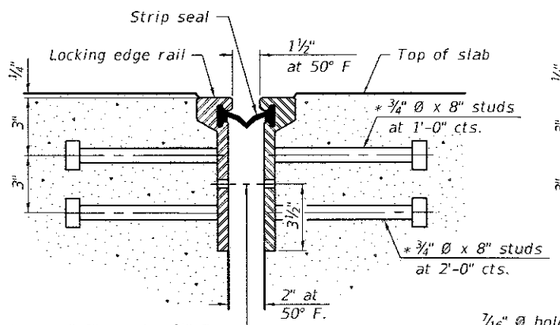
SECTION A-A



SECTION B-B

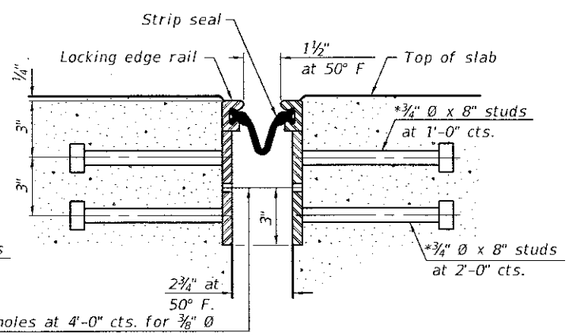


TRIMETRIC VIEW
(Showing back plates only)



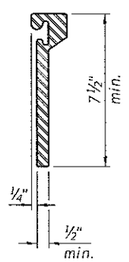
7/16" Ø holes at 4'-0" cts. for ⅜" Ø bolts. All bolts shall be burned, sawed, or chipped off flush with the plates after forms are removed, typ.

SECTION THRU ROLLED RAIL JOINT

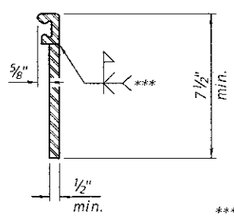


7/16" Ø holes at 4'-0" cts. for ⅜" Ø bolts. All bolts shall be burned, sawed, or chipped off flush with the plates after forms are removed, typ.

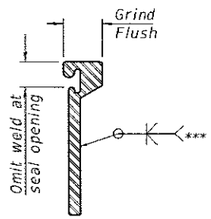
SECTION THRU WELDED RAIL JOINT



ROLLED EXTRUDED RAIL



WELDED RAIL



*** Back gouge not required if complete joint penetration is verified by mock-up.

LOCKING EDGE RAIL SPLICE

The inside of the locking edge rail groove shall be free of weld residue.

Rolled rail shown, welded rail similar.

* Granular or solid flux filled headed studs conforming to Article 1006.32 of the Std. Specs., automatically end welded.

LOCKING EDGE RAILS

Notes:

The strip seal shall be made continuous and shall have a minimum thickness of ¼". The configuration of the strip seal shall match the configuration of the Locking Edge Rails. Open or "webbed" strip seal gland configurations are not permitted. The gland shall be sized for a maximum rated movement of 4 inches.

The Locking Edge Rails depicted are conceptual only, except for the minimum dimensions shown. The actual configuration of the Locking Edge Rails and matching strip seal may vary from manufacturer to manufacturer. Flanged edge rails will not be allowed. Locking Edge Rails may be spliced at slope discontinuities.

The manufacturer's recommended installation methods shall be followed.

The joint opening and deck dimensions detailed on the superstructure are based on a rolled rail expansion joint. If the Contractor elects to use the welded rail expansion joint, the opening and deck dimensions shall be modified according to the dimensions detailed on this sheet. Required modifications shall be made at no additional cost to the State.

All steel components shall be galvanized after fabrication according to Article 520.03 of the Standard Specifications.

Maximum space between rail segments shall be 3/16", sealed with a suitable sealant. Joints in rails within 10 ft. of curbs shall be welded.

Parapet plates and anchorage studs for skews > 30° included in the cost of Preformed Joint Strip Seal.

BILL OF MATERIAL

Item	Unit	Total
Preformed Joint Strip Seal	Foot	265

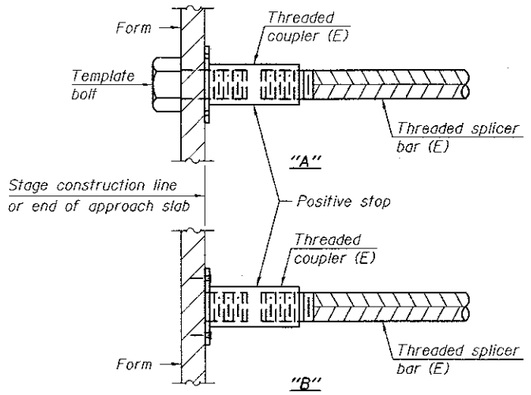
STANDARD BAR SPLICER ASSEMBLY

Threaded splicer bar length = min. lap length + 1½" + thread length

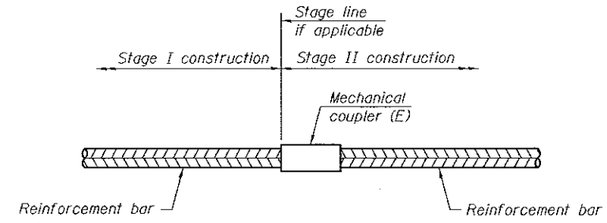
* Epoxy not required on Bar Splicer Assembly components used in conjunction with black bars.

Location	Bar size	No. assemblies required	Minimum lap length
S. Abutment	5	18	3'-4"
S. Abutment	6	8	4'-0"
Pier 1	5	36	3'-6"
Pier 2	5	36	3'-6"
N. Abutment	5	18	3'-4"
N. Abutment	6	8	4'-0"



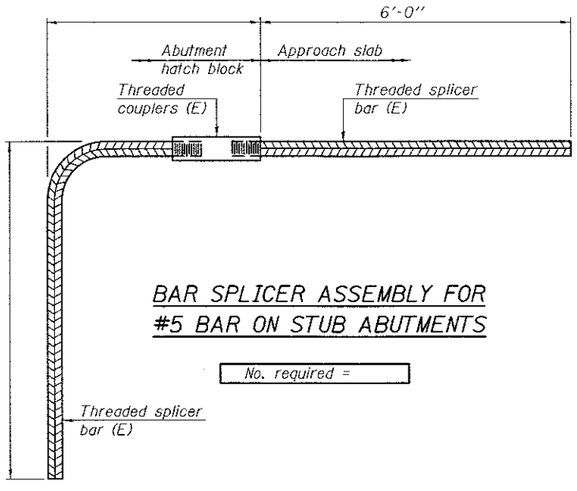
INSTALLATION AND SETTING METHODS

"A" : Set bar splicer assembly by means of a template bolt.
"B" : Set bar splicer assembly by nailing to wood forms or cementing to steel forms.
(E) : Indicates epoxy coating.



STANDARD MECHANICAL SPLICER

Location	Bar size	No. assemblies required



BAR SPLICER ASSEMBLY FOR #5 BAR ON STUB ABUTMENTS

No. required =

NOTES

Splicer bars shall be deformed with threaded ends and have a minimum 60 ksi yield strength.

All reinforcement shall be lapped and tied to the splicer bars.

Bar splicer assemblies shall be epoxy coated according to the requirements for reinforcement bars. See Section 508 of the Standard Specifications.

See approved list of bar splicer assemblies and mechanical splicers for alternatives.
