GENERAL NOTES

Existing Structure: Reinforced Concrete Pipe Culvert 18"

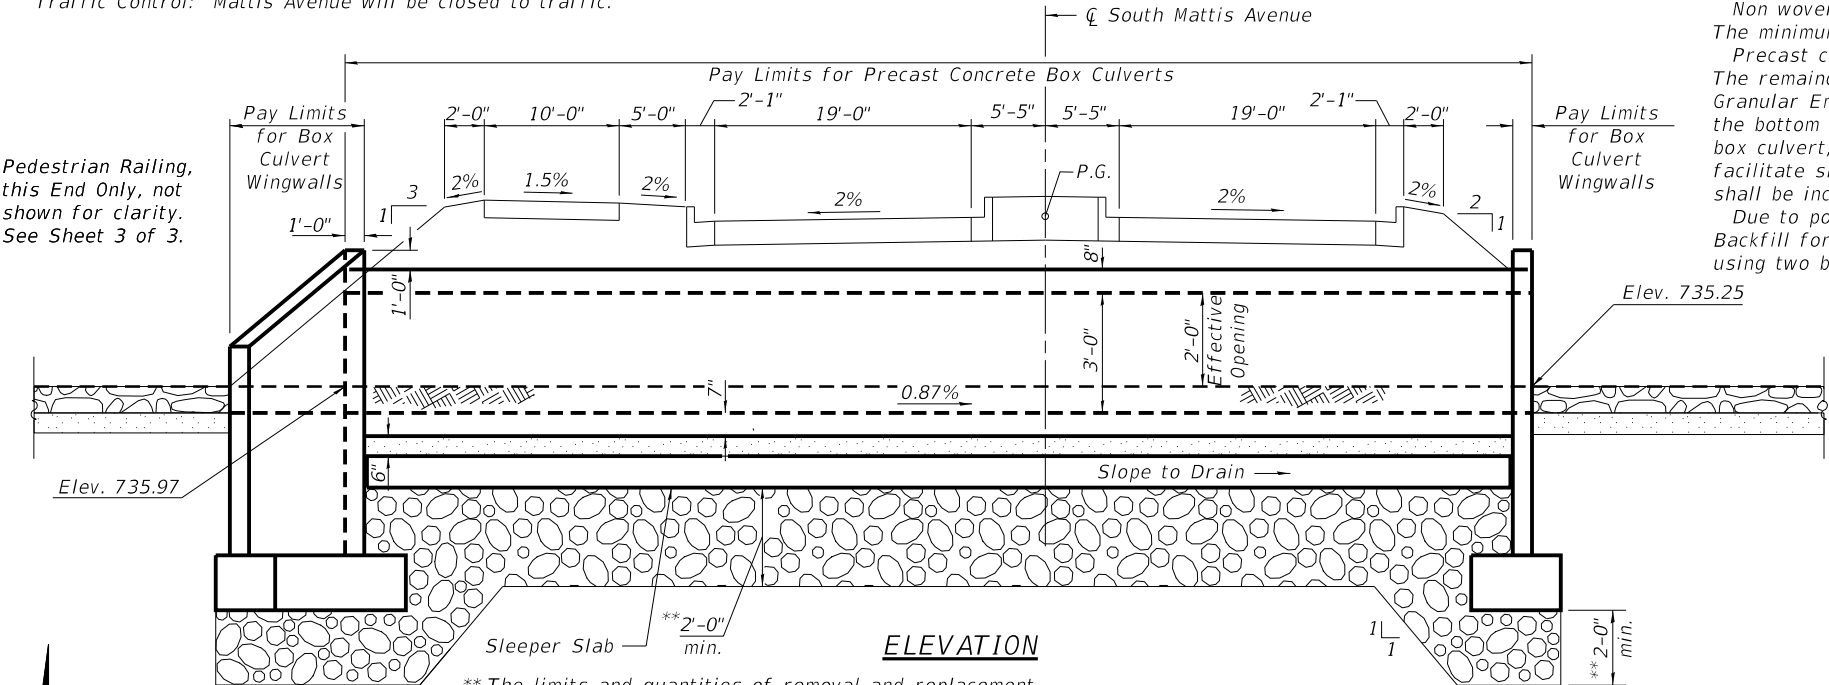

Traffic Control: Mattis Avenue will be closed to traffic.

The design fill height for this box is 1.4 ft. The precast box culvert sections shall conform to the requirements of ASTM C 1577.

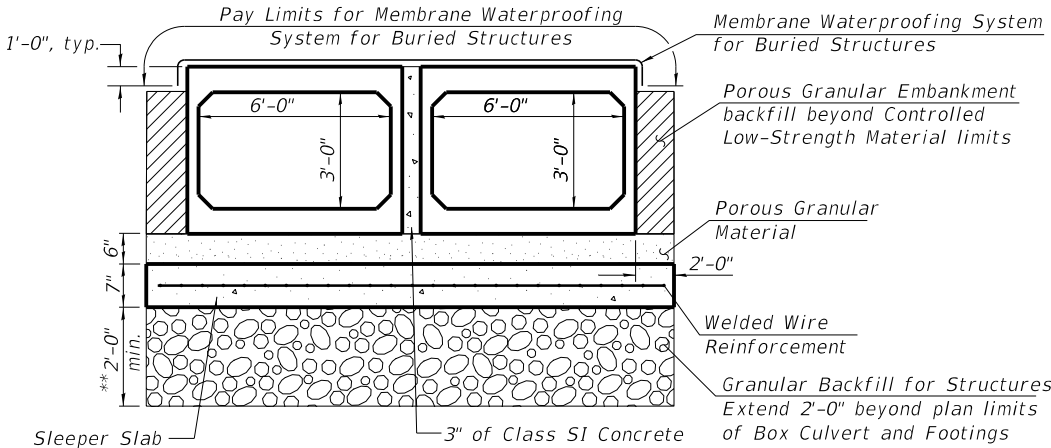

Non woven geotextile fabric shall conform to the requirements of Art. 1080.01 of the Standard Specifications. The minimum weight of the fabric shall be 6 ounces per square yard.

Precast concrete box culverts shall be backfilled under the roadway with Controlled Low-Strength Material as shown. The remainder of the precast concrete box culverts and box culvert end sections shall be backfilled with Porous Granular Embankment in the required excavation areas on the sides of the box culvert from the top of the box culvert to the bottom of the box culvert. The 6-inch thick layer of porous granular material required under the precast concrete box culvert, according to Section 540.06 of the standard specifications, shall be placed over the sleeper slab to facilitate sliding assembly of the boxes. The cost of this porous granular material will not be paid for separately but shall be included in the cost of Precast Concrete Box Culverts.

Due to poor soils, a Class SI concrete sleeper slab 7" thick shall be constructed over a minimum of 2'-0" of Granular Backfill for Structures. Place welded wire reinforcement mid-depth of sleeper slab, per Highway Standard 420701-03 using two bays of equal or unequal width.

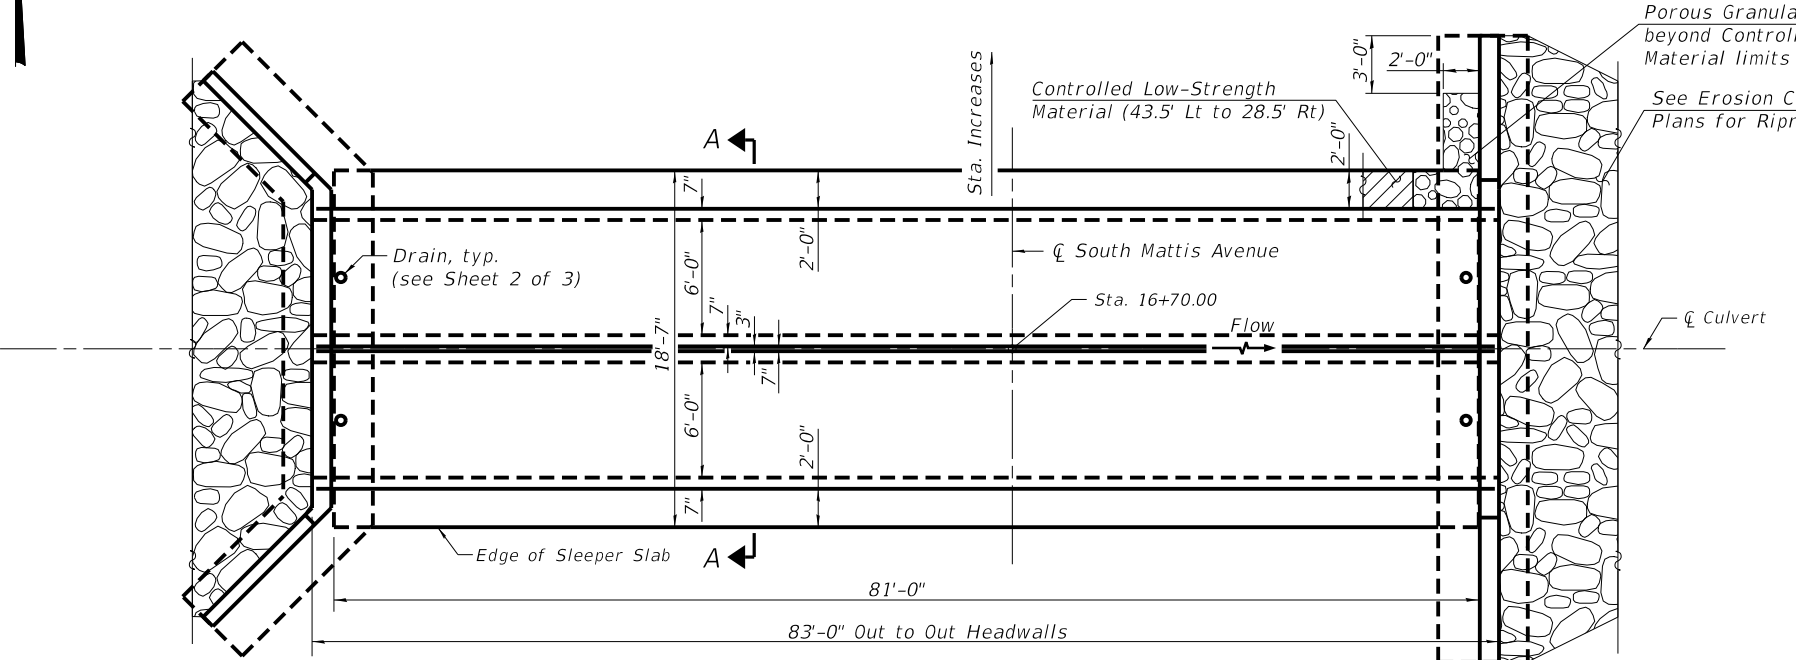

**The limits and quantities of removal and replacement shown are based on the Boring Data and may be modified by the Engineer and Field Engineers for variable subsurface conditions encountered in the field.

TYPICAL RAILING DETAIL

NOTES

Railing shall be according to Section 509 of the Standard Specifications, except as noted, and will be paid for at the Contract Unit Price per foot for Pedestrian Railing.

Hollow structural sections shall conform to the requirements of ASTM designation A 500, Grade B, structural steel tubing.

All other steel shapes and plates shall conform to the requirements of AASHTO M 270 Grade 36.

CVN testing is not required for the HSS tubing used in the Pedestrian Railing.

All heavy hex nuts shall be according to ASTM A 563 grade DH.

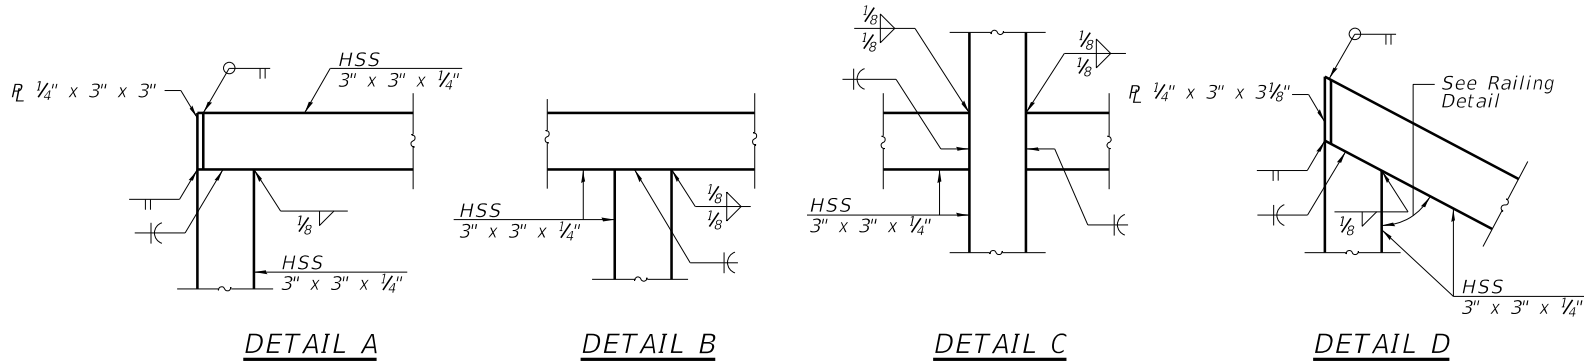

All fully threaded anchor rods shall be ASTM F1554 grade 105.

The post base plate shall be fastened to the wall snug tight and given an additional 1/8" turn.

Rail splice inserts may be built out of bent plates of the same thicknesses and outside geometry limits as the 4-plate rail splice inserts shown.

Space reinforcement to miss anchor rods.

All posts, railing, splices, anchor devices, and bent plates shall be galvanized and painted. Galvanizing shall be according to Article 509.05 of the Standard Specifications. See Special Provisions.
