

Illinois Department of Transportation

2300 South Dirksen Parkway / Springfield, Illinois / 62764

June 2, 2008

SUBJECT: FAP Route 698 (IL 89)
Project F-0698 (028)
Section (102,103)RS-4
Bureau County
Contract No. 66762
Item No. 42, June 13, 2008 Letting
Addendum A

NOTICE TO PROSPECTIVE BIDDERS:

Attached is an addendum to the plans or proposal. This addendum involves revised and/or added material.

1. Revised page 1 of the Schedule of Prices.
2. Revised page i of the Table of Contents to the Special Provisions.
3. Added page 41 to the Special Provisions.
4. Revised sheets 3 and 4 of the Plans.

Prime contractors must utilize the enclosed material when preparing their bid and must include any Schedule of Prices changes in their bidding proposal.

Bidders using computer-generated bids are cautioned to reflect any and all Schedule of Prices changes, if involved, into their computer programs.

Very truly yours,

Eric E. Harm
Interim Bureau Chief
Bureau of Design and Environment

Revised 06/02/2008

HOT MIX ASPHALT – DENSITY TESTING OF LONGITUDINAL JOINTS (BMPR)

Effective: January 1, 2007

Revised: February 20, 2008

Description: This work shall consist of testing the density of longitudinal joints as part of the quality control / quality assurance (QC/QA) of hot-mix asphalt (HMA). This work shall be according to Section 1030 of the Standard Specifications except as follows.

Definitions:

Density Test Location: The station location used for density testing.

Density Test Site: Individual test site where a single joint density value is determined.

Joint Density Value: The density determined at a given density test site from the average of two or potentially three readings.

Quality Control / Quality Assurance (QC/QA)

1030.05(a)(4) Replace with the following:

“Illinois-Modified ASTM 2950, Standard Test Method for Determination of Density of Bituminous Concrete In-Place by Nuclear Methods (Density Modified)”

1030.05(d)(3) Add the following paragraphs:

“Longitudinal joint density testing shall be performed at each random density test location. Longitudinal joint testing shall be located at a distance equal to the lift thickness, or a minimum of two inches, from each pavement edge (i.e. For a four inch lift the near edge of the density gauge or core barrel shall be within four inches from the edge of pavement.). It shall be documented as to whether the joint was confined or unconfined.

The joint density value shall be determined using either a correlated nuclear gauge or cores. When using a correlated nuclear gauge, two one-minute density readings shall be taken at the given density test site. The gauge shall be rotated 180 degrees between readings. If the two readings are not within 1.5 lb/cu ft (23 kg/cu m) then one additional reading shall be taken. Additional density readings taken at a given site shall not be allowed to replace the original density readings unless an obvious error has occurred (i.e. the nuclear gauge was sitting on debris).

1030.05(d) (4) Add following to density control limits:

Mixture / Parameter	Joint Density Value
All HMA Mixtures	$\geq 90.0\%$

Added 06/02/2008
