GENERAL NOTES

CONSTRUCTION SPECIFICATIONS:

State of Illinois Standard Specifications for Road and Bridge Construction (1973 Edition) and Special Provisions.

DESIGN SPECIFICATIONS:

Division I of the AASHTO "Standard Specifications for Highway Bridges" (1973 Edition) including all Interim Specifications.

DESIGN LOADING:

Live Load - HS20-44
Dead Load - Weight of structure includes reinforced concrete at 150 lbs. per cu. ft.; 18 lbs. per sq. ft. for Class I Surface Course and provisions for a future wearing surface of 25 lbs. per sq. ft. of roadway.

DESIGN UNIT STRESSES:

Concrete in Flexure:
fc = 1,200 psi (Deck Slab)
fc = 1,400 psi (Curbs, Parapets) Substructure f'c = 3500 psi.
Reinforcing Steel: (ASTM 615)
Grade 40 fs = 20,000 psi. tension, fy = 40,000 psi.
Grade 60 fs = 24,000 psi. tension, fy = 60,000 psi.
Structural Steel;
Structural Carbon Steel (M183)
fs = 20,000 psi.

CONCRETE:

The concrete rail section above the mandatory construction joint at the top of the slab shall be constructed of Class X Concrete, except the aggregates shall conform to the requirements of Handrail Concrete.

REINFORCEMENT:

All reinforcement shall conform to A.S.T.M. A615, Grade 40 except as otherwise noted for Pier 4 and spirals.

PAINTING:

The basic lead silico chromate paint system shall be used for shop and field painting of Structural Steel.

PROTECTIVE COAT:

Protective Coat shall not be applied to surfaces to which Waterproofing Membrane System is applied.

STRUCTURAL STEEL:

Fasteners shall be high strength bolts. Bolts 7/8" ϕ, open holes 15/16" ϕ, unless otherwise noted.

Anchor bolts shall be set before bolting cross frames over supports.

Field welding of construction accessories will not be permitted to the bottom flange of girders nor to the top flange for a distance equal to one-fourth the span length each way from the pier supports. Field welding in other areas will be permitted only when approved by the Engineer.

The main load carrying member components subject to the supplemental requirements for notch toughness are the flanges as designated in the elevation view along with the webs and all splice plates of the steel girders.

EMBANKMENTS AND SLOPE WALLS:

The embankment configurations shown shall be the minimum embankment that must be constructed prior to construction of the abutments.

Layout of slope walls may be varied in the field to suit ground conditions as directed by the Engineer.

CAISSON CONCRETE:

For construction requirements and payment for Caisson Concrete see Special Provisions; f'c = 3500 psi.

TOTAL BILL OF MATERIAL

Item	Unit	Super.	Sub.	Total
Cofferdam Excavation	Cu. Yd.	——	230.0	230.0

STRUCTURAL STEEL NOTES

GENERAL NOTES: See Sheet 2.
CAMBER: All girders to be cambered as shown on Sheet 5.
MATERIALS: All structural carbon steel shall conform to A.A.S.H.T.O. M183.
FIELD CONNECTIONS: All field splices and connections to be bolted with 7/8" High Strength bolts conforming to A.A.S.H.T.O. M164.
Holes shall be 1 1/16" ϕ in all lower lateral connection plates and gusset plates of cross frames for 7/8" ϕ High Strength Bolts. Hardened washers shall be required over holes in laterals and gusset plates.
All other holes shall be 15/16" ϕ.
DETAILS: All longitudinal and transverse dimensions are measured horizontally at a normal temperature of 50° F.

NOTES

For Bearing Details, see Sheet 7.
For exact location of stiffeners, see Framing Plans.

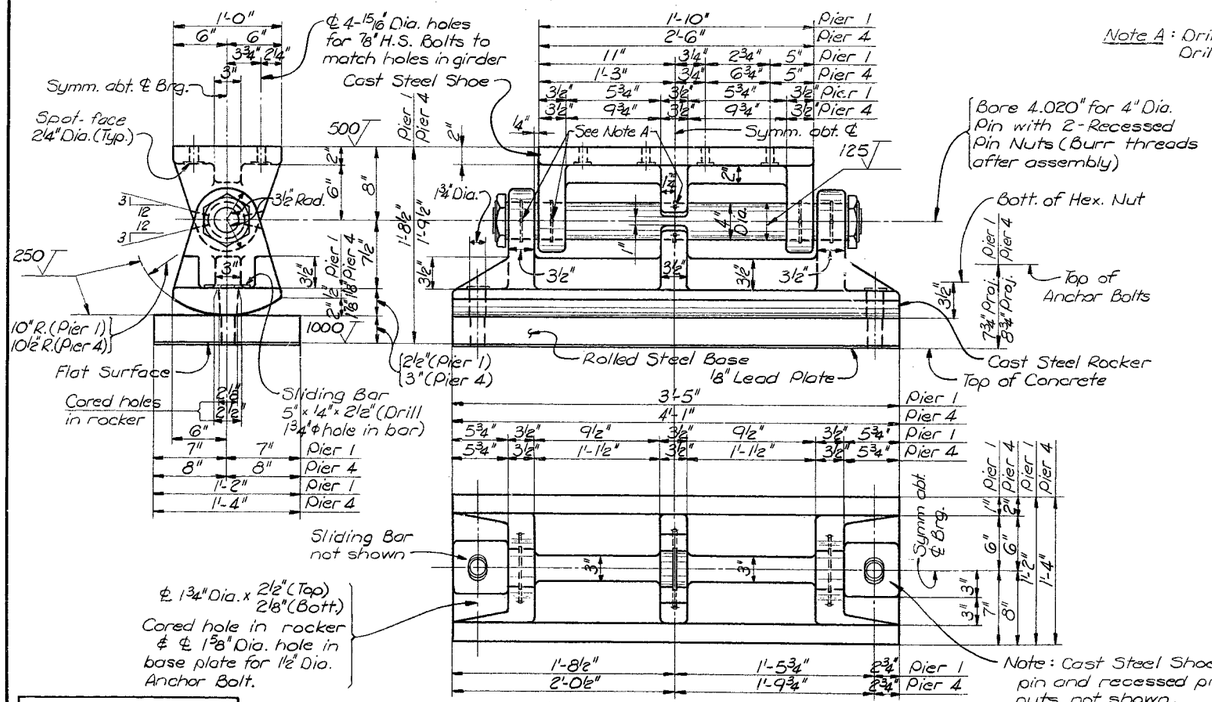
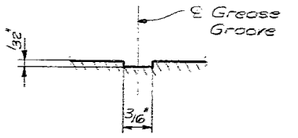
Note: Number of anchor bolts shown are total for both piers or abutments.



EXPANSION BEARING - PIERS 1 AND 4

(6 - Required at each pier)

Note A: Drill ¼" ϕ Hole to grease groove. Drill and tap for grease fitting (Typ.)



GREASE GROOVE ON SADDLE

Note: Grease bearing assembly with molybdenum grease before installation.

BEARING NOTES

For Structural Steel Notes, see Sheet 6.

All fillets to be ¾" radius unless otherwise shown.

Structural steel weldments of equal sections and strength may be substituted for the castings.

Lead plates shall conform to A.A.S.H.T.O. M112. Weight of lead plates shall be included in weight of Structural Steel.

All material shall conform A.A.S.H.T.O M183 except as otherwise noted.

Castings shall conform to A.A.S.H.T.O M 192, Class 70.

Anchor bolts shall conform to A.S.T.M. A307.

Weight of castings shall be computed on the basis of the minimum thickness of material shown. Drafts supplied at the convenience of the fabricater shall not be included in payment.

Where finished surfaces are indicated on the drawings, the surface finishes shall conform to the American National Standard's Institute surface roughness requirements in A.N.S.I. B46.1.

Bearing seat surfaces shall be constructed or adjusted to the designated elevations within a tolerance of ± 1/8 inch. Adjustment shall be made either by grinding the surface or by shimming the bearing. Two 1/8" adjusting shims, of the dimensions of the bottom bearing plate, shall be provided for each bearing in addition to all other plates or shims.

Pins shall conform to S.A.E. 8620 material and shall be heat treated and case hardened to a depth of 0.12" to 0.15" to a hardness of 58 H.R.C. Pins shall be polished to a smooth finish after case hardening.

I_S and S_S are the moment of inertia and section modulus of the steel section.
I_C and S_C are the moment of inertia and section modulus of the composite section used in computing f_S.
V_R is the maximum LL + Impact shear range for positive moment areas used to determine shear connector spacing.

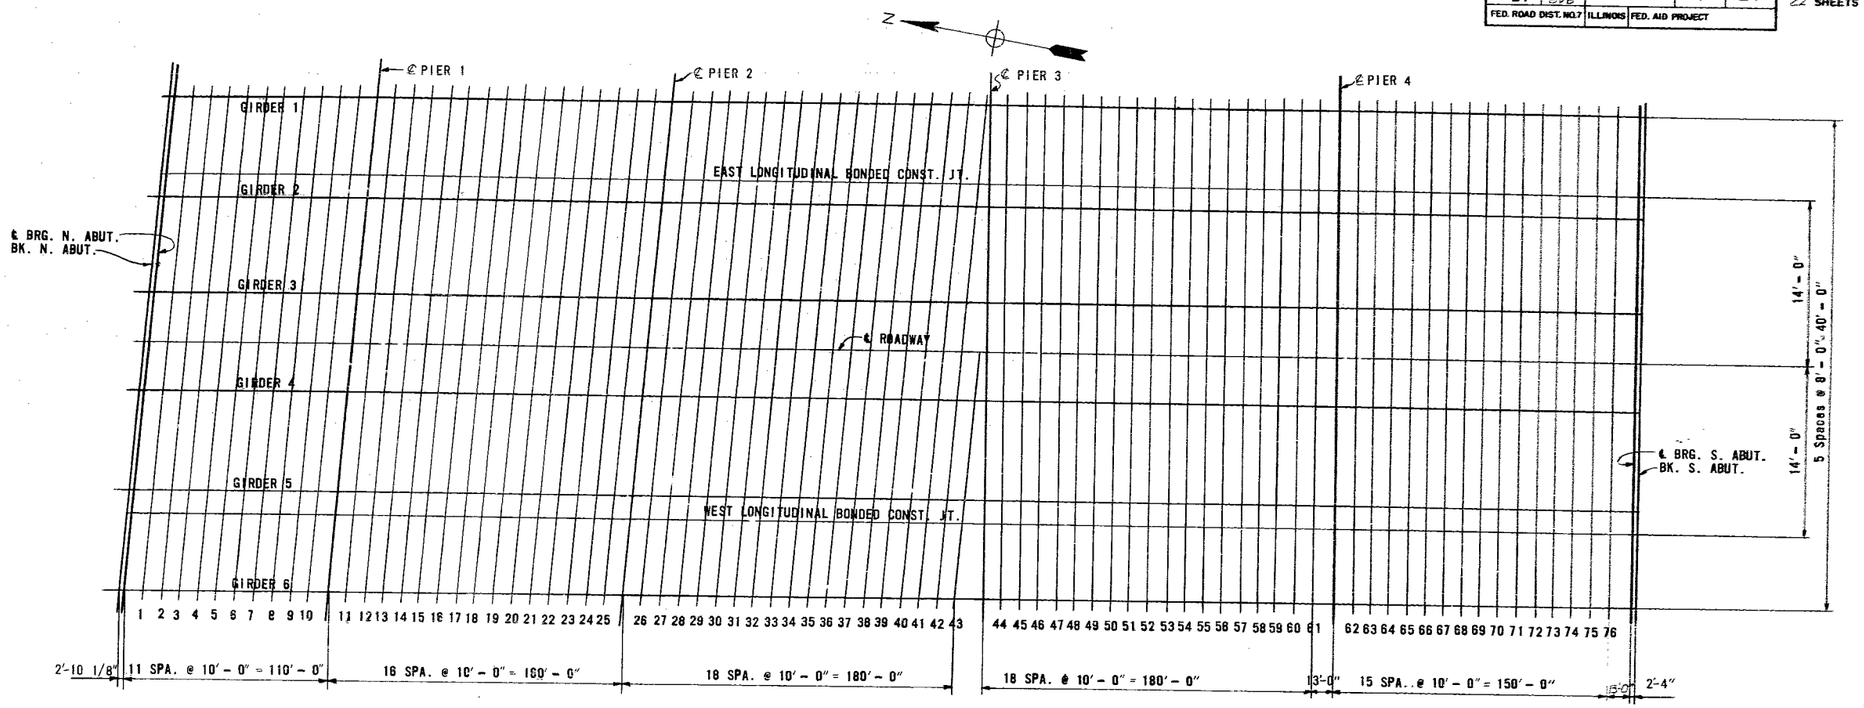
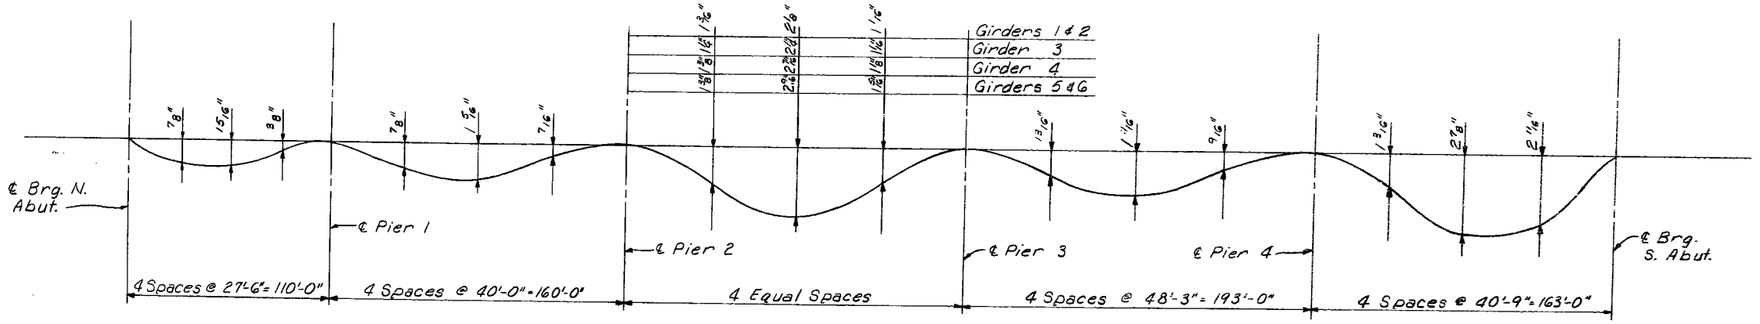
Note: Elevations are at top of concrete slab.

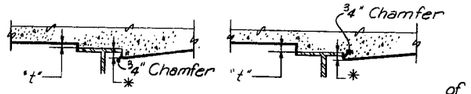


PLAN



DEAD LOAD DEFLECTION DIAGRAM
(Includes weight of concrete only)

Note: The above deflections are not to be used in the field if the Engineer is working from the grade elevations adjusted for dead load deflections as shown on Sheets 9 & 10.



*Variable (¼" minimum)

FILLET HEIGHTS

To determine "t": After all steel has been erected, elevations of the top flanges of the girders shall be taken at intervals shown in the Plan. These elevations subtracted from the "Theoretical Grade Elevations Adjusted for Dead Load Deflection" shown on Sheets 10 & 11, minus 8" slab thickness, equals the fillet heights "t" above top flanges of girders.

Note: Do not scale this drawing. Follow dimensions.

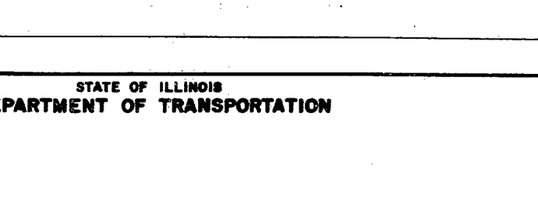
RAIL POST DETAILS

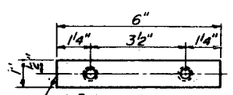


RAIL SPLICE

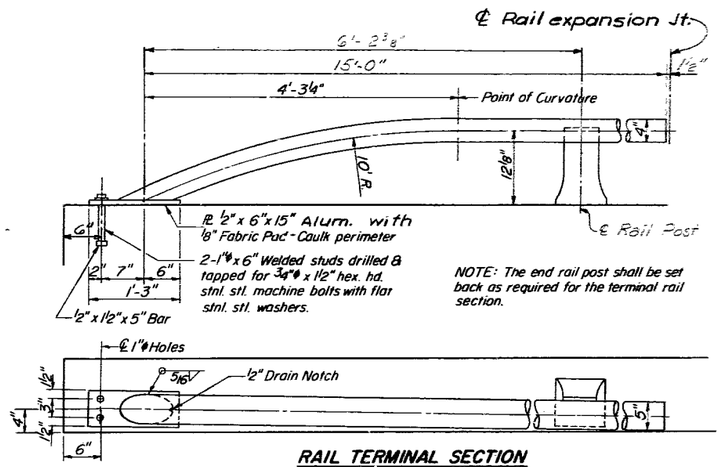
SEC. THRU ELLIPTICAL RAIL SECTION

Splice must be a sliding fit in Rail Section

SEC. THRU SPLICE



CLAMP BAR



RAIL TERMINAL SECTION

Stainless steel machine bolts or cap screws shall be in accordance with Article 710.37(a) of the Std. Spec's. except Grade B8 or B8M may be furnished.

Quantity :
Neoprene Expansion Jt. (6/2) = 93 L.F.

NOTES

For Rail Post Spacing and Estimated Quantity of Rail, see Sheet 14.
For Neoprene Expansion Joint, see Sheet 22.

NOTES:

All Aluminum Alloy Extruded Rail shall be supplied in modular lengths of 30 feet, except at the end of bridge or over open joints in bridge deck where the rail shall be attached to a minimum of 2 posts. If the rail is on a horizontal curve of 2300 foot radius or less, the modular lengths may be reduced but shall be attached to a minimum of 2 posts.

All joints in rail shall be spliced per detail.

Provide 1 - 1/8" and 2 - 1/16" Aluminum Shims for 25% of the Posts. Rail element shall be parallel to Grade - high spots shall be ground and low spots shimmed.

Seal perimeter of base of post to parapet with two component non-staining gray sealing compound with polysulfide liquid polymers, gun grade with primer. Fabric Bearing Pad shall have same dimensions as base of post.

Aluminum alloy rail shall conform to ASTM B221 alloy 6061-T6 or 6351-T5 with min. yield 35 ksi, min. tensile 38 ksi, and elongation of 10% in 2 inches.
